- ◆ Tekmira Pharmaceuticals began the first phases of tests on its anti-Ebola drug in January 2014—months before the first reported Ebola outbreaks in Sierra Leone. To develop the drug, Tekmira was given \$140 million by the US Department of Defense and \$1.5 million by Monsanto.
- ◆ The US government has a viral fever bioterrorism research laboratory in Kenema, West Africa, one of the locations of the Ebola outbreak. The World Health Organization and other United Nations agencies have also been “testing” in African nations.
- ◆ On October 26, 2009, the US government filed for Patent # CA2741523A1, for the hEbola virus (“Ebola” with the prefix “h”) that contained a particular set of nucleotide sequences. The patent was awarded in 2010. Patents are not awarded unless the creation is new; so this strain was obviously genetically engineered. (As of this writing, 368 mutations of the Ebola virus are known.) Why would someone develop a weaponized pathogen—unless drugs were also being developed to combat this new patented strain? The patent also claims ownership of any “weakened” or “killed” Ebola viruses—in other words, the very substances that are used to make vaccines! This means that even more insidiously, this ownership also extends to the *blood* of all those infected with this virus. So, technically and legally, anyone suffering from Ebola is now the government's property. The US government can use this ownership as a legal excuse to stop any other research for Ebola treatments. Significantly, the patent also states that this strain of Ebola was deposited with the CDC, which owns many labs and offices that are based in the US.
- ◆ The US president's executive order, “Revised List of Quarantinable Communicable Diseases,” permitted the government to apprehend anyone it says carries the virus (ostensibly to prevent the spread of a communicable disease). “This means,” writes Joachim Hagopian of the Centre for Research on Globalization, “that anyone with respiratory problems that might include bronchitis, COPD or pneumonia can potentially be rounded up at any time. This disinformation of protecting people under benign pretense is the deceptive bait by which the totalitarian police state closes in on its stranglehold of the American populace. Every week the government is ratcheting up conditions ripe for the next manufactured crisis on domestic soil that will ultimately pave the way for martial law and the . . . roundups of American citizens. . . . [The] CDC asserts that any healthy American can be detained as well, based on mere suspicion that he or she might have come into contact with an infected person.”⁶⁵
- ◆ Many medical as well as political anomalies indicated that the recent outbreak was completely manufactured—and that it wasn't as dangerous as one might believe. A few doctors (quoted only in the alternative media) noted the lack of typical Ebola symptoms—bloody eyes and ears, and bleeding from the skin—in those who died. Public photos of bloody blistered skin were suspected to be from previous outbreaks. In some ways, this new GE virus appeared similar to the flu: fever, headache, muscle pain, weakness, diarrhea, abdominal pain and vomiting, with only a few Ebola-like symptoms such as severe sore throat, rash, and gastrointestinal bleeding. As of this writing, the number of deaths from Ebola have been minimal compared to the number of deaths from malaria, tuberculosis, and other diseases that have plagued Africans for decades. Nevertheless, it's always wise to take preventive measures. Fortunately, there are successful natural cures that do not involve dangerous vaccines or pharmaceuticals. These protocols include Vitamin C, ozone, and various immune-supporting herbs. See the Ebola entry for protective measures to take, along with some remedies for prevention and treatment.

The drug Tamiflu® was synthesized to supposedly mimic the effects of shikimic acid, an antiviral substance occurring naturally in some plants (see Insert, “Natural Substances That Kill Viruses and/or Support Immune Function,” on page 828). However, the drug caused blackouts, epileptic seizures, hallucinations, and even suicides in children. After taking the drug, 12 Japanese children died. Japan banned the drug; but in the US it’s still promoted, despite at least three children’s deaths in 2018 (two of them suicides). “At \$100 per dose,” Dr. Joseph Mercola wrote, “the US used taxpayer’s dollars to purchase some 20 million doses of the highly questionable Tamiflu®, lining the pockets of then Defense Secretary Donald Rumsfeld who was president of Gilead Sciences when they created the drug.”⁶⁶

becoming so numerous, and manifest so many different symptoms, that one strain often has several names and their classifications are confusing.

Contrary to popular belief, the different kinds of *Herpes* viruses do not necessarily stay in “their own” location. They can, and do, migrate to other parts of the body, even though the sores may not be as recognizable once they’re away from their customary area. So if, for example, you have sores on your mouth, don’t engage in oral-genital contact mistakenly believing that your oral *Herpes* won’t affect someone else’s genitals. You might infect your partner! If one set of frequencies doesn’t work, try others.

Herpes can be controlled with diet. During active outbreaks especially, avoid all grains including corn; peas, beans, peanuts and other legumes; chocolate; coffee; and all nuts and seeds (especially cashews). These foods contain high levels of the amino acid arginine, which encourages the virus to replicate. The virus also feeds on sugars, including the fructose in fruit. For persistent infections, abstain from these foods until immune function improves.

Supplement with lysine (an amino acid); it retards viral growth. It may help even more if given preventively over a period of time before, rather than during, outbreaks. A 1987 clinical trial concluded that a 1000 mg (1 gram) dose of L-lysine, taken 3 times a day for 6 months, “appears to be an effective agent for reduction of occurrence, severity and healing time for recurrent HSV infection.”⁶⁷ However, this may pertain only to nonimmunocompromised hosts. Note that less potent doses of lysine are not effective. Some studies using under 1000 mg per day of lysine found that it had no effect in preventing outbreaks, and then used this data to justify reporting that lysine doesn’t work at all!

You can also apply liquid iodine (a vital nutrient that kills pathogens), diluted first in jojoba or another mild oil, onto the sores until scabs form. Selenium inhibits the viruses from reproducing; lithium orotate slows the formation of the viral capsid; and Vitamin A, Vitamin C, and zinc support the immune cells.

Various *Herpes* viruses have been seen in cases of cancer, but no direct causal relationship has been proven. When cancer cells are present and dividing wildly, the body may be more prone to infection. Recent medical research indicates that *Herpes* Type 6 is prevalent in aggressive breast cancer. *Herpes simplex* 1 and *Herpes simplex* 2 have been found in many cases of cervical cancer. And a large percentage (25% or higher) of people with Hodgkin’s Disease are also afflicted with *Herpes* Virus Type 3.

Whatever strain of *Herpes* you have, try the general frequencies and do the sweeps. For the frequency 1550, sweep from 1549 through 1553. Also see “*Herpes* Virus Type 3 / *Herpes zoster* / Chicken Pox / Varicella / Shingles.” Because *Herpes* migrates out of its “own” region, Jimmie Holman’s frequencies are worth trying.

Important: *Not enough time per frequency can stimulate a dormant Herpes virus to replicate. To ensure devitalization instead of exacerbation, stay on each frequency for 15 or even 20 minutes, especially if you’re using equipment that isn’t manufactured by Pulsed Technologies.*

Single Frequency Experimental Set

One experimenter applied this frequency for one hour, then applied Vitamin E, and later reported a complete clearing within a couple of days.

37K

Cytomegalovirus (CMV) or Salivary Gland Virus

See “*Herpes* Virus Type 5 (Human *Herpes* Type 5) / Cytomegalovirus (CMV) / Salivary Gland Virus” in this section.

Herpes simplex 1

Causes cold sores in the mouth. However, *Herpes simplex* 1 can gravitate elsewhere—such as to the genitals, where it has been linked to cervical cancer. Except for 2950 (run for 20 minutes), run each of the following frequencies for at least 6 minutes.

From Dr. John Garvey: 725, 2432, 243, 6353, 732, 844, 646

Sweep 646–664, remaining on each frequency for 1–2 minutes.

Also try: 1488 (for at least 15 minutes) and 2950 (for at least 20 minutes)

Dr. Marty Monahan says that he runs the same numbers for all *Herpes* strains: 144, 274, 344, 423, 450, 522, 571, 624, 762, 6545

From Dr. Hulda Clark. Use the Hz set for units unable to output KHz. With such a wide frequency range, you may want to sweep.

KHz sets:

291250 (lowest), 292K (optimal), and 293050 (highest)

345350 (lowest), 345500 (optimal), and 345760 (highest)

Hz sets:

721.94 (lowest), 723.80 (optimal), and 726.40 (highest)

856.04 (lowest), 856.41 (optimal), and 857.05 (highest)

Also from Clark: 14537.82, 17201.43

Herpes simplex 2

Causes painful genital sores or lesions that can last for a few days or longer than one week. Often, the person feels a tingling along the nerves in the abdominal and pelvic regions just before an outbreak. *Herpes simplex 2* isn't necessarily restricted to the genitals. It may gravitate to the mouth.

This virus has also been found in many cases of cervical cancer. Set your machine to sweep between 804 and 824 for at least 25 minutes because every increment has been used for this strain.

From Dr. John Garvey: 725, 1230, 245, 314, 965

Dr. Marty Monahan says that he runs the same numbers for all *Herpes* strains: 144, 274, 344, 423, 450, 522, 571, 624, 762, 6545

Sweep: 800–850, remaining on each frequency for 1–2 minutes.

From Dr. Hulda Clark. Use the Hz set for units unable to output KHz. With such a wide frequency range, you may want to sweep.

KHz set: 353900 (lowest), 355K and 360K (optimal), 362900 (highest)

Hz set: 877.23 (lowest), 879.96 and 892.35 (optimal), and 899.54 (highest)

Use all the frequencies of a given set, as this microorganism is extremely difficult to eradicate.

Also from Clark: 17923.34, 17674.41

Herpes simplex 2, More

360, 373, 528, 685, 540, 665, 716, 717, 718, 731, 732, 733, 776, 846, 880, 888, 1402, 8778

Herpes simplex, more, unspecified

From Dr. John Garvey: 322, 343, 476, 808, 822, 843, 1043, 1614, 2062

Herpes Virus Type 3 / Herpes zoster /

Chicken Pox / Varicella / Shingles

The general public used to know this as chicken pox or *Varicella* (also the name of the microbe), a highly contagious viral disease caught mainly by children. Symptoms include spots, blisters, and scabs on the skin. However, more recently this virus has received publicity as the cause of shingles, a very painful condition of inflamed nerves along the skin. It affects more adults than children. In fact, shingles tends to erupt in adults who either haven't had chicken pox as children, or (more

Homeopathy to Prevent Genital *Herpes*

Most of the time, just before the lesions appear, the virus causes a sharp or stabbing pain, pinching, or a tingling along some nerves—felt chiefly in the abdomen or genital region. It's possible to prevent an outbreak if, within 15 or 30 minutes (but no longer) of this warning sign, you use homeopathy. Take one or two pellets of *Natrum muriaticum* (Nat. Mur.), dose 30C, every 4 hours while the tingling or other nerve symptoms are still active.

commonly) have received the chicken pox vaccine. Before invasive medical intervention (vaccination), children contracted chicken pox, their immunity was established, and they didn't have to worry after that about becoming infected by *Varicella* or any of its mutations. A large percentage (25% or higher) of people with Hodgkin's Disease are also afflicted with *Herpes Virus Type 3*.

See "*Varicella* / Smallpox" in this section, as sometimes the two diseases can mimic each other.

From Jimmie Holman. Deliver frequencies in precisely the order written. They might not work on units other than those manufactured by Pulsed Technologies. 65657.25, 65656.25, 65655.25, 65313.5, 65312.5, 65311.5, 65094.75, 65093.75, 65092.75, 39394.75, 9393.75, 39392.75, 39188.5, 39187.5, 39186.5, 39057.25, 39056.25, 39055.25

From Dr. Richard Loyd: 466, 898

From Dr. John Garvey: 111, 392, 574, 633, 714, 766, 787, 837, 1220, 1557, 1675, 2664, 3343, 3806, 6230, 8225

Dr. Marty Monahan says that he runs the same numbers for all *Herpes* strains: 144, 274, 344, 423, 450, 522, 571, 624, 762, 6545

Herpes Virus 4 (Human Herpes Virus 4) /

Epstein-Barr Virus / Infectious Mononucleosis / Chronic Fatigue Syndrome (CFS)

Names for this debilitating condition are used interchangeably. Symptoms include fever, headache, sinus congestion, aching muscles, enlargement of lymph nodes in neck, digestive disturbances, weakness, impaired memory and cognition, sleep disturbances, irritability, anxiety and depression, sensitivity to heat and light, and recurrent respiratory infections. Children and young adults are infected more easily than adults.

This syndrome has many causes, including viruses administered in one of the polio vaccines. For 35 years, CFS was known as myalgic encephalomyelitis before the Centers for Disease Control renamed it in 1988. Dr. Lawrence Klapow found adults and

Spend Enough Time Rifting for Herpes

Not enough time per frequency can actually stimulate a dormant *Herpes* virus to replicate. To ensure devitalization instead of exacerbation, stay on each frequency for 15 or even 20 minutes.

larvae of a new roundworm species, provisionally named *Cryptosporogylus pulmoni*, in the sputum of almost half of chronic fatigue sufferers, compared to a finding of zero in a control group. The parasite reproduces in the lungs. Its larvae burrow into the intestinal tract and migrate back to the lungs, where they reach adulthood and continue the cycle.

The term “chronic fatigue,” when not specifically referring to a condition caused by the Epstein-Barr virus, is vague. One may be “chronically fatigued” due to any number of conditions that are caused by many different pathogens. These pathogens can be found under **VIRUSES**, under **BACTERIA**, under **CANDIDA, FUNGI, MOLDS AND YEASTS**, and under **PARASITES, PROTOZOA AND WORMS**. Specifically see **BACTERIA**, “*Mycoplasma*,” because these microbes lack cell walls and invade the cellular structure of the host (which can make it difficult to eradicate them). Also see **BACTERIA**, “Brucellosis / Brucelliasis / Undulant Fever.”

Low energy is involved, so see **GLANDS, Thyroid**, “Thyroid, Underactive / Hypothyroidism” as well as **GLANDS, Adrenals**. Check for anemia and for mercury poisoning from silver-mercury fillings.

Epstein-Barr is often prominent in some forms of cancer, so also see, under **CANCER**, “Breast Cancer”; “Hodgkin’s Disease / Lymphogranuloma, Malignant”; and “Leukemia.” See frequencies for nerve pain and function under **BRAIN AND NERVOUS SYSTEM, MIND AND EMOTIONS** and **REGENERATION AND HEALING**. Vigilant rifting is indicated, along with liver detox and immunity building. It can take a long time to overcome this condition.

444, 2323, 669 (all from Dr. John Garvey), 663 (sweep 663–669), 660 + 690 + 727, 386K

Dr. Marty Monahan says that he runs the same numbers for all *Herpes* strains: 144, 274, 344, 423, 450, 522, 571, 624, 762, 6545

From Dr. Hulda Clark. Use the Hz set for units unable to output KHz. With such a wide frequency range, you may want to sweep.

KHz set: 372500 (lowest), 375K and 380K (optimal), 382350 (highest)

Hz set: 923.34 (lowest), 929.53 and 941.93 (optimal), and 947.75 (highest)

Use all the frequencies of a given set, as this microorganism is extremely difficult to eradicate.

Also from Clark: 18919.09, 18670.15

Also try (for various secondary infections and pain relief): 1.1 + 73, 4.9, 6.3 + 148, 20, 27.5 + 220 + 410, 35, 72, 95, 105, 120, 125, 172, 253, 274, 330, 424, 428, 444 + 1865, 465, 738, 744, 776, 778, 787, 788, 802 + 1550, 1800, 825, 880, 1013, 1032, 1920, 2127.5, 2720, 10K, 6618, 8768, 40K

Herpes Virus Type 5 (Human Herpes Type 5) / Cytomegalovirus (CMV) / Salivary Gland Virus

Affecting mostly infants and small children, it’s sometimes called Cytomegalic Inclusion Disease (CID). Causing fatigue and respiratory symptoms, it’s associated with stillborn, premature or low birth weight infants, and infections of the liver, kidney, lung, pancreas, adrenals, thyroid, salivary glands, gastrointestinal tract, and central nervous system. It can remain latent in the body for a long time, eventually causing severe cancers such as leukemia and lymphoma. This virus may be related to forms of mononucleosis not caused by *Herpes Virus Type 4*. From Dr. John Garvey: 83, 235, 645, 2323, 3432, 4093, 5532

More from Dr. John Garvey: 2145, 12537, 41514, 47425, 47524, 48576, 48586, 48587, 48765

From Michael Tigchelaar: 126, 597, 629, 682, 1045, 2144, 2145, 2146, 8848, 8856

From Dr. Hulda Clark: 20362.91, 1013.81

From Dr. Richard Loyd: 466

Dr. Marty Monahan says that he runs the same numbers for all *Herpes* strains: 144, 274, 344, 423, 450, 522, 571, 624, 762, 6545

Herpes Virus Type 6 / Human Herpes Type 6

It’s unclear what Type 6 symptoms are, but new research indicates that women with breast cancer may have harbored this virus for a while before manifesting tumors. See **CANCER**, “Breast Cancer,” and “Epstein-Barr Virus / Infectious Mononucleosis / Chronic Fatigue Syndrome (CFS) / *Herpes Virus 4 (Human Herpes Virus 4)*” in this section, because medical research shows the presence of Epstein-Barr in aggressive breast cancer.

From Dr. John Garvey: 183, 702, 747, 2245

Dr. Marty Monahan says that he runs the same numbers for all *Herpes* strains: 144, 274, 344, 423, 450, 522, 571, 624, 762, 6545

Also try: 228, 1820, 3640.1, 7281

Herpes Type C

It’s unclear how Type C manifests—new viruses are constantly being discovered—but recent research indicates that people with cancer may have harbored this virus for a while before manifesting tumors.

395, 424, 460, 533, 554, 701, 745, 2450

HIV (Human Immunodeficiency Virus) / AIDS (Acquired Immune Deficiency Syndrome)

The immune cell CD4+ T lymphocyte is destroyed by HIV, allowing so-called opportunistic infections to occur. These include lymphoma, Kaposi's sarcoma, shingles and pneumonia, which if constant and severe can lead to death.

The origin, transmission, and even definition of AIDS is controversial. The US government once grouped AIDS into four different stages, depending on the lowest existing T cell count and the opportunistic diseases one contracts. But the statistics constantly changed, according to what illnesses the government included in the AIDS-related diseases category. For example, when cervical cancer was added to the list of opportunistic infections, the number of people afflicted with AIDS became higher.

In 1969, a transcript of "Hearings Before a Subcommittee of the Committee on Appropriations House of Representatives, 91st Congress, First Session" was released. In it, Deputy Director of Defense Research and Engineering Dr. Donald MacArthur requested funds to produce "a synthetic biological agent, an agent that does not naturally exist and for which no natural immunity could have been acquired."⁶⁸ In 1983, pathologist and pharmacologist Robert B. Strecker, and his attorney brother Ted, unearthed documents showing that the AIDS virus is a pathogen genetically engineered in a laboratory. In February 1999, Naval Academy graduate and attorney Boyd E. Graves uncovered government documents—including a 1971 Special Virus AIDS Flow Chart—containing a timeline of how, when, where, by whom, and to whom the virus was developed and administered.

HIV is a dangerous retrovirus with unique capabilities. Although everyone who has AIDS is HIV positive, not everyone whose bloodstream contains HIV antibodies has AIDS. In fact, some doctors consider it a good sign that someone has produced high numbers of antibodies to a virus; it's a sign that the immune cells are working properly. Poor diet, so-called recreational drugs, benzene, and fluoride make the system susceptible to many of the infections under the AIDS umbrella.

Look for frequencies pertaining to the affected system or organs. See "*Herpes Virus Type 5 (Human Herpes Type 5) / Cytomegalovirus (CMV) / Salivary Gland Virus*" under **Herpes, all types** in this section; and applicable entries under **CANCER**. Also see **BACTERIA**, "*Mycoplasma*, many types," because *Mycoplasma* infection often triggers autoimmune conditions. Finally, see the various liver fluke listings under **PARASITES, PROTOZOA AND WORMS**, as Dr. Hulda Clark reported liver flukes clogging the thymus (where T cells are made) in autopsies of people who died of HIV-related illnesses. Always use 2489 and 464.

From Dr. Marty Monahan: 444, 528, 683, 714, 830, 450, 727

From Dr. Hulda Clark for HIV: 365K or 904.74 (for units unable to reach the kilohertz range) and 18172.28

1.2 + 250, 1.44, 20, 72, 95, 125, 200, 238, 249, 333 + 523 + 768 + 786, 418, 428, 440, 444 + 1865, 448, 450, 464, 522, 590, 600 + 625 + 650, 660 + 690 + 727, 683, 685, 700, 714, 760, 776, 780, 787, 802 + 1550, 804 to 813, 830, 832, 880, 1K, 1113, 1489, 1500, 1600, 1800, 2008, 2127.5, 2170, 2420, 2489/2490, 2625, 2720, 1570, 1770, 2K, 3K, 3040, 3140, 3175, 3275, 3375, 3475, 3554, 31K, 3100, 6121, 31750, 34750, 5K

Kaposi's Sarcoma

Blotchy skin lesions that often appear with AIDS.

249, 418 (both from Dr. John Garvey), 647

Influenza

Influenza—popularly known as the flu, and sometimes the gripe—causes very unpleasant respiratory and gastrointestinal infections. Symptoms include coughing, muscle and head aches, fatigue, fever, chills, sore throat, nasal discharge, and sometimes abdominal cramping and diarrhea. Some of these viruses (such as Influenza A) are found in many different animals (including ducks, chickens, pigs, whales, horses and seals), while others (such as Influenza B) are found only in humans.

Classifications for the hundreds of influenza viruses are somewhat arbitrary. They're based on the proteins on the viral surface, notated according to year, location or prominent symptom. Sometimes they are simply given a letter. These viruses constantly mutate, usually each year. So not only is it impossible to predict frequencies for future outbreaks, it can be problematic to manage a current one. Therefore, if individual frequencies don't work for you, use the sweep function on your rife machine to encompass a range of numbers.

See Insert, "Natural Substances That Kill Viruses and / or Support Immune Function," on page 828. A study performed in Japan between December 2008 and March 2009, which was reported in the *American Journal of Clinical Nutrition*, showed that children taking Vitamin D3 were 58% less likely to contract the flu. The vitamin also lessened the number of asthma attacks in children with a history of asthma.⁶⁹

Frequencies below are from Richard Loyd. He calls it the "Cold Flu Coronavirus Adenovirus RSV program":

20, 72, 120, 125, 152.2, 155, 250, 278, 304, 304.4, 309.9, 315.5, 333, 336, 400, 440, 444, 456.5, 464, 464.9, 465, 472.50, 487, 512, 523, 550, 552, 608.7, 619.9, 654, 666, 683, 712, 720, 725.75, 727, 728, 760.9, 768, 774.8, 776, 786, 787, 800, 802, 821, 836, 850, 870, 875, 880, 885, 886, 941.93, 946, 959, 962, 975.98, 959, 962, 995, 1217.5, 1234, 1239.7, 1369.6, 1394.7, 1500, 1550, 1674, 1947, 2008, 2050, 2435, 2479.5, 2720, 3672, 4400, 4870, 4888, 4959, 5K, 5500, 7344, 7500, 7728, 7760, 7762, 7764, 7766, 7767, 8210, 8700, 9740, 9918, 12500, 18919.09, 40K, 120K, 313350, 320K, 615K

RSV short set (Loyd): 487, 654, 995

Leishmania Virus

There is evidence that the *Leishmania* virus inhabits the *Leishmania* protozoan and is part of the pathogenic effects of the protozoan.

"New World" Leishmania Virus

428.3, 856.6, 1713.1

"Old World" Leishmania Virus

431.8, 863.6, 1727.2

Lyssavirus / Rabies

Rabies attacks the nervous system. Symptoms in humans include fever, irrational behavior, and violent spasms of the throat made worse by the sight of water (giving the disease another name, "hydrophobia," or fear of water). Usually transmitted through a bite or scratch by an infected animal, the virus may now also be airborne. Animals exhibit odd or aggressive behavior, continual growling or other vocalizations, and/or frothing around the mouth.

The incubation period (time between exposure to the virus and onset of symptoms) can be a few days to several years, but onset of symptoms usually occurs between three and eight weeks. The incubation period depends on the severity of the wound, the location of the bite, and the person's immunity (and hence, susceptibility to infection).

Some holistic professionals and even mainstream scientists report statistically significant numbers of infected people who are untreated yet remain healthy. According to some data, only one in ten people bitten by a rabid animal actually develops rabies. Also, there's evidence that some cases of what we call "rabies" are actually other neurological conditions. A few practitioners treat rabies solely with homeopathy—either with a complicated protocol of specific remedies, or a dose of rabies nosode (a safe homeopathic version of a vaccine). Nevertheless, allopaths insist that rabies can be fatal if not treated with pharmaceuticals; and I would be irresponsible if I failed to advise anyone bitten by a rabid animal to go to the emergency room immediately for rabies shots. The shots are administered *after* a suspected infection, and are different from a (supposedly preventive) vaccine.

Read the portion on rabies in Chapter 1, **The Vaccine Controversy**. See **INSECT BITES** for theoretical ideas on how to manage the toxins in the body. Consider the possibility of meningitis and other neurological infections, so also see **BRAIN AND NERVOUS SYSTEM, MIND AND EMOTIONS**.

Norwalk Virus

A subset of calicivirus, highly contagious Norwalk lives in contaminated water and food, causing abdominal pain and cramping, vomiting, diarrhea, and fever. Illness can last several days, affecting children and adults. Frequencies below are general; for specifics, go to dnafrequencies.com. 776, 787, 802 + 1550, 832, 840, 880, 1570, 1998, 2008, 2052, 2127.5, 2489, 2490, 5K

Papilloma Virus / Human Papilloma Virus (HPV)

Causes warts and benign skin tumors with branches or stalks, and sometimes white patches. Vaccine producers claim that HPV is a major cause of cervical cancer, but offer little proof. Rather, when cancer cells are present and dividing wildly, the body may be more prone to HPV infection. Remember that viruses don't necessarily stay in their "own" region; so try numbers for other strains.

From Dr. Richard Loyd: 40, 320, 570, 850, 857, 874, 907, 30250, 173210, 301800, 402850, 410700, 475470, 2976935

From Dr. Marty Monahan: 466, 874, 907, 1003, 1008

From Dr. Hulda Clark. Use the Hz set for units unable to output KHz. With such a wide frequency range, you may want to sweep.

KHz set: 404700 (lowest), 405K (optimal), and 406750 (highest)

Hz set: 1003.15 (lowest), 1003.89 (optimal), and 1008.23 (highest)

Also from Clark: 20163.76, 20128.91, 1002.16

Paramyxovirus

This large group of viruses encompasses smaller subgroups of pathogens that cause the measles, mumps, bronchitis, pneumonia, croup, and the flu in humans. Paramyxoviruses are also involved in a range of diseases in animals: canine distemper, phocine (seal) distemper, cetacean (dolphin and porpoise) morbillivirus, Newcastle disease virus (in birds), and rinderpest virus (in cattle).

From Michael Tigchelaar: 126.4, 139.4, 278.8, 505.6, 557.5, 1011.2, 1115.1, 2022.3, 2230.1, 4044.7, 4460.2, 8089.4, 8089.5, 8920.5

Parvo Virus

All parvo symptoms are similar, whether the strain affects only dogs or dogs and humans: diarrhea, inflammation of the gastrointestinal tract, malabsorption, and lethargy.

Parvo's arrival coincided with vaccine manufacturing. To produce the distemper vaccine, drug manufacturers cultivated it from the kidneys of cats infected with feline panleukopenia virus (FPV). Canine parvovirus is very similar to FPV—in fact, parvo was classified as a mutation of FPV just after it first appeared circa 1978! After dogs were injected with distemper vaccines, parvo became widespread. Veterinarian Deva Khalsa writes: "When I entered veterinary school in 1976, parvovirus

disease in dogs didn't exist. No dogs were presented to the University of Pennsylvania School of Veterinary Medicine (UPSVM) infected with parvovirus until 1978. . . . the sudden and devastating outbreak of parvo was because the feline panleukopenia virus (FPV) that had long been present in dog vaccines mutated to a form that could jump species and infect dogs! . . . It makes sense that the symptoms of feline panleukopenia are very similar to parvovirus symptoms in dogs."⁷⁰

Experienced breeders of naturally reared (NR) dogs (raw fed and never vaccinated) rarely have problems with parvo, due to the superior immunity that the mother dogs confer to their young. If a puppy does contract parvo, fluids are given intravenously and rectally, as canine deaths from parvo are chiefly due to dehydration. Most NR puppies and dogs survive, proof that parvo does not have to be a death sentence.

I would rely on more than the frequencies below. Administer colloidal silver (on an empty stomach).

Parvo Virus, Canine only

First try (from Dr. John Garvey): 323, 562, 622, 4027

Also try: 185, 188, 323, 428, 433, 488, 514, 535, 562, 613, 622, 637, 755, 1K, 2257, 4027

Parvo Virus, Canine, Type B

Affects only dogs.

First try (from Dr. John Garvey): 323, 535, 755

Also try: 488, 514, 535, 613, 755, 761, 764, 766, 768 (sweep between 755 and 768), 2257

Parvo Virus, Canine and Human

Affects humans as well as dogs.

185, 323, 514, 535, 562, 613, 622, 755, 1K, 4027

Respiratory Syncytial Virus (RSV)

This is the most common cause of pneumonia among infants and very young children, characterized by fever, runny nose, cough, and sometimes wheezing. RSV can also cause infections throughout life, especially among the elderly or those with compromised cardiac, respiratory, or immune functions.

From Dr. Richard Loyd (short set): 487, 654, 995

From Dr. Hulda Clark. Use the Hz set for units unable to output KHz. With such a wide frequency range, you may want to sweep.

KHz set: 378950 (lowest), 380K (optimal), and 383150 (highest)

Hz set: 939.32 (lowest), 941.93 (optimal), and 949.73 (highest)

Also from Clark: 18919.09

Also try: 1647, 2528, 2542, 3448, 4763

And then try: 278, 336, 712

Retrovirus, variants

Inserting their genetic codes directly into the host cell chromosomes, retroviruses cause the host cells to make copies of them whenever the host cells replicate. These general frequencies are unproven. However, 40K is worth running as it restores voltage to tissue.

465, 448, 660 + 690 + 727, 787, 800, 880, 2489, 40K

Rhinovirus

704, 774.9, 813.3, 8240.5, 865 (from Dr. Richard Loyd), 1041.1, 1168.0, 1190.7, 1193.2, 1256.6, 1267.1, 1270.5, 1272.1, 1385.9, 1387, 1390, 13950.5, 1400.1, 1402.7, 2217.7

Rotavirus

From the *Reoviridae* family, the Rotavirus is the most common cause of viral gastrointestinal problems in North America in very young children (usually occurring between the ages of three months and three years). Diarrhea is often accompanied by fever and vomiting, and lasts for a few days to one week. Dehydration can become a serious problem due to fluid loss, so drink plenty of water.

From Dr. Richard Loyd: 666. Also sweep from 665–667

Also try these general antiviral frequencies: 776, 787, 802 + 1550, 832, 840, 880, 1570, 1998, 2008, 2052, 2127.5, 2489, 2490, 5K

Rubella / German Measles / 3-day Measles

Caused by *Rubella*, a virus in the *Togaviridae* family. Contagious but much milder than regular measles, it usually erupts in children. Symptoms include a skin rash, headache, sore throat, and perhaps fever. Its name, unrelated to the country Germany, probably comes from the Latin *germanus* which means "similar." This refers to the similarity between measles, German measles, and the mumps (even though each is caused by a different virus). Pregnant women should avoid exposure because *Rubella* can cause birth defects or miscarriage during the first trimester.

431, 517, (both from Dr. John Garvey), 20, 342, 344 + 510 + 943, 368, 420 to 465, 459, 520, 660 + 690 + 727, 734, 772, 784 to 787, 796, 880, 967, 1489

Rubeola / Measles

Caused by *Rubeola*, a microbe in the Paramyxovirus family (related to the mumps virus). Highly contagious and usually erupting in children, symptoms include fever, runny nose, coughing, sneezing, fatigue, and a skin rash with lesions. Don't confuse this with German measles.

467, 520, 1489 (all from Dr. John Garvey), 333 + 523 + 768 + 786. 342, 442, 443, 521, 529, 552, 660 + 690 + 727, 712, 745, 757, 763, 784, 787, 880, 962

Rubulavirus / Mumps

Usually a childhood disease, caused by the contagious Rubulavirus microbe in the Paramyxovirus family. Familiar symptoms are swelling of the salivary glands, in the neck between the jaw and ear. Other symptoms include head, ear and muscle aches; fever; dry mouth; fatigue; loss of appetite; sensitivity to light; and hearing difficulties.

Adult males who develop mumps may have fertility problems. Adult females may miscarry. A rare inflammation of the brain or spinal cord may develop, so also see “Meningitis” and “Encephalitis” under **BRAIN AND NERVOUS SYSTEM, MIND AND EMOTIONS**.

242, 516, 642, 922, 2630, 3142 (all from Dr. John Garvey), 14, 20, 152, 190, 253, 428, 660 + 690 + 727, 674, 787, 880, 1243, 1660, 2008, 2127.5, 2489, 2720

Simian Virus 40 (SV40)

Between 1954 and 1963, 98 million Americans received polio vaccines contaminated with a carcinogenic monkey virus known as Simian vacuolating virus 40 or SV40. In 1960, the medical community acknowledged that SV40 causes cancerous tumors in laboratory animals. The National Cancer Institute admits that SV40 plays a role in mesothelioma, an aggressive lung cancer. Researchers worldwide have found SV40 in adult human lung, bone, lymphatic, and brain cancers (astrocytomas, ependymomas, glioblastomas, medulloblastomas, and *papillomas* of the choroid plexus). SV40 has also been found in the cancers of some children too young to have received the contaminated Salk vaccine. SV40 comes from rhesus monkey cells, which despite their danger have been permitted to be used in the manufacture of the poliovirus and Adenovirus vaccines.

From Dr. Jeff Sutherland (run for at least 6 minutes each): 1344.45, 1344.43, 1413.46, 1876.13, 2642.24, 2962.14, 5543.65, 5631.24, 6346.71, 6653.86, 7635.45

Strep Virus

Is inside the “strep throat” bacterium *Streptococcus pyogenes*. 563, 611, 660 + 690 + 727, 727, 848

Swine Flu / H1N1

In early 2009, the World Health Organization (WHO) in the US warned the public to prepare for the so-called “level-six pandemic,” a bird-pig-human hybrid influenza virus called H1N1. Although total swine flu deaths for 2009 were lower than the number of human deaths from ordinary seasonal flu, this “preparation” meant hysteria and inoculations. Negative reactions from the vaccine (often within hours of injection) were reported

in France, Japan, Sweden, China, the US, and other countries. Injuries included the paralyzing Guillain-Barre Syndrome, which had resulted in 1976 from a similar vaccine and which the UK’s Medicines and Healthcare products Regulatory Agency publicly linked to the swine flu vaccine. Other injuries included thrombocytopenia (a pathological scarcity of blood platelets) and Bell’s Palsy (facial paralysis). In China, more than 1200 vaccinated people reported rashes, headaches, anal soreness, suddenly plummeting blood pressure, and anaphylactic shock. The Centers for Disease Control Advisory Committee on Children’s Vaccines reported an increase of over 700% of miscarriages among vaccinated pregnant women without admitting the cause. The CDC also urged inoculation for pregnant women even though fetal deaths in vaccinated women increased by 2440% in 2009 compared to previous years. Most people who died from swine flu, or who endured severe, often permanent damage, had been previously injected with the H1N1 vaccine.

No scientific studies existed proving that H1N1 vaccines worked, but vaccine manufacturers were legally protected from being sued for damages. In April 2010, the director of the national Center for Infectious Disease Research and Policy publicly admitted that flu shots don’t work in the elderly—even though two months earlier, a branch of the CDC had recommended that children as young as 6 months of age be vaccinated, and that elders over 65 years receive four times the normal dose.

The vaccines contained viral pieces and thimerosal, which causes inflammation, autoimmune disorders and brain damage. (Thimerosal, legally defined as hazardous waste, is not allowed to be discarded with regular garbage but is allowed to be injected.) The drugs also contained squalene, an oil that’s beneficial when rubbed on the skin but harmful when injected. Some people were concerned about the drugs being “contaminated” with other debris such as rotavirus material, but this is an oxymoron, as vaccines are by definition “contaminated.” See Chapter 1, **The Vaccine Controversy**.

Non-mainstream media questioned the wisdom and need for vaccines. Finally, corporate media—including ABC News, CNN, *The Washington Post*, *Time Magazine* and Fox News—publicized the truth about this non-emergency. A June 2010 report in the *British Medical Journal* revealed that five World Health Organization advisors had called the H1N1 flu a “level-six pandemic” to induce a fearful public to buy vaccines they didn’t need—thus financially enriching not only drug companies, but also the WHO advisors who were secretly receiving kickbacks. In the last three months of 2009, GlaxoSmithKline shipped \$1.4 billion worth of vaccines, paid for by citizens’ taxes—vaccines, wrote Mike Adams, that “will soon have to be destroyed (at additional taxpayer cost, no doubt) or dumped down the drain (where they will contaminate the waterways).”⁷¹ Despite relentless

publicity about this presumably dangerous disease, fewer than one-third of United States residents chose inoculation.

From Dr. Richard Loyd: 278, 332, 336, 413, 432, 462, 660, 709.2, 712, 776, 777, 787, 850, 1552, 18919.09, 2838.5, 5K, 1674K

Other: 432 and 839 (Dr. Garvey), 413, 663, 995, 2625

Tobacco Mosaic Virus (TMV)

Affecting over 200 species of plants (including tomato, pepper, cucumber, melon, squash, and many flowers), this virus causes leaves to brown, curl, wrinkle, become rough or smaller than usual, and develop blotchy brown areas (mosaic-like mottling). Growth is often stunted and the produce has an abnormal flavor. The first virus ever identified, and highly infectious, the TMV is very stable and can survive for long periods on garden tools, clothing, and surfaces. Even insects can pass the virus from eating infected plants. Thoroughly wash non-plant items that have been exposed. Do not compost contaminated plants!

Bring your radiant plasma frequency machine outside and let it broadcast to the plants.

From Dr. John Garvey: 233, 274, 543, 782, 1052

Typhoid Virus

1862

From Royal Rife, possibly used on his #4 machine: 760K (rod form), 1445K (filter passing form)

Varicella

See “*Herpes Virus Type 3 / Herpes zoster / Chicken Pox / Varicella / Shingles*” under **Herpes, all types** in this section.

Variola / Smallpox

The *Variola* virus causes a severe infection known as smallpox. Symptoms include fever, headache, muscular and abdominal pain, vomiting, and skin lesions that are painful and blotchy. The skin eruptions can leave scars, so open up some Vitamin E capsules and continually apply it.

Secondary infections are often from bacteria that invade the virally-caused lesions. Also see “*Herpes Virus Type 3 / Herpes zoster / Chicken Pox / Varicella / Shingles*” under **Herpes, all types** in this section, because sometimes the two diseases can mimic each other.

From Dr. John Garvey: 476, 511, 876, 1644, 2132, 2544
Also try: 20, 141, 142, 143, 475, 477, 510, 512, 875, 877, 1643, 1645, 2131, 2133, 2144, 2145, 2543 (sweep 2131–2132, 2144–2145, 141–143, 2131–2133)

Then try: 334, 360, 471, 506, 542, 569, 647, 660 + 690 + 727, 711, 787, 802 + 1550, 832, 880, 1644, 3222

West Nile Virus

Flaviviruses, members of the *Flaviviridae* family, cause infections mostly spread by mosquitoes: Yellow Fever, Dengue Fever, St. Louis Encephalitis, Japanese Encephalitis, and Hepatitis C. West Nile was first identified in 1937 in the West Nile district of Uganda. Since then, the most notable outbreaks in humans (which usually are rare) occurred in Israel and South Africa; though the mid-1990s saw an increase of outbreaks in humans and horses in Romania, Morocco, Tunisia, Italy, Russia, the US, Israel, and France. The highest incidence occurred in Russia (942 cases). Only one in five infected people developed mild illness, and only one in 150 infected people—less than 0.00065 % of the entire population—developed brain inflammation (meningitis or encephalitis).

The milder symptoms, usually lasting three to six days, include abdominal pain, nausea, vomiting and diarrhea; fever; headache; muscle aches; loss of appetite; and sore throat. More severe, sometimes life-threatening forms, are sometimes called West Nile encephalitis or West Nile meningitis. Symptoms include muscle weakness, stiff neck, mental confusion, and loss of consciousness.

Researchers believe that West Nile is spread when a mosquito bites an infected bird and then bites a person. However, there's solid evidence that the disease proliferates in areas that spray pesticides and chemtrails into the air. The following frequencies are experimental. 410.4, 412.4, 439.4, 820.7, 824.8, 878.8, 1641.5, 1649.6, 1757.5, 3283, 3299, 3515

Yellow Fever Virus

See “*Flaviviridae / Yellow Fever Virus / Yellow Fever / Yellow Jack / Black Vomit*” in this section.

Zika Virus

A relatively benign member of the virus family *Flaviviridae*, and related to the dengue, yellow fever, and West Nile viruses, Zika is transmitted by mosquitoes. Its name comes from the Zika Forest of Uganda, where it was first isolated in 1947. According to the CDC, this illness is usually mild. In fact, many subjects experience no symptoms at all. When symptoms do occur, they may include fever, rash, joint pain, and conjunctivitis (inflammation of the membrane coating, or conjunctiva, of the inner surface of the eyelids), which makes the eye red.

In May 2015, the Pan American Health Organization (PAHO) warned about a Zika virus outbreak in Brazil because women were giving birth to infants with a birth defect called microcephaly, characterized by an abnormally small head that results in developmental problems. However, the World Health Organization (WHO) admitted that any causal connection between microcephaly and the Zika virus was not demonstrated (despite the fact that it declared a global health emergency due to the virus). Data collected by pediatric cardiologist Sandra Mattos showed that more than 1,600 babies had

been born with mild microcephaly since 2012—a full four years before a Zika outbreak was widely publicized. Zika had never before been associated with birth defects, even in areas where 75% of the population was infected.

There are three probable causes of the microcephaly “epidemic,” either alone or in combination. First, the spreading of microcephaly coincided with a mass spraying of pyriproxyfen, a larvicide used to control mosquito populations. Manufactured by Monsanto subsidiary Sumitomo Chemical, the larvicide seeped into the water supply. Not surprisingly, the one region of Brazil in which pyriproxyfen was used suffered the most number of birth defects. Other areas of Latin America, which do not use the larvicide, have not been similarly afflicted. As of February 17, 2016, Brazil banned the use of pyriproxyfen—but not before a large number of human infants suffered severe birth defects. There may also be a second causal link between microcephaly and a new vaccine that all pregnant women are required to receive—the DTwP, or whole cell pertussis vaccine. (Some pregnant Brazilian women are encouraged to get the MMR vaccine as well.) The third causal relationship with the upsurge of the virus is the release of over 800,000 genetically engineered, sterile mosquitoes by the British company Oxitec—precisely in the region of Brazil that had the highest incidences of microcephaly.

Note that in 1947, the Zika virus was extracted from the blood of a Ugandan rhesus monkey, and deposited, by a J. Casals associated with the Rockefeller Foundation, into a laboratory products company, ATCC, which was selling the freeze-dried virus over the internet.

Despite the inconclusive link between the Zika virus and microcephaly, the media panicked over the damage that this suddenly dangerous virus supposedly causes. There are no publicly available frequencies for Zika, so go to dnafrequencies.com. As with any virus, Zika is not treatable with antibiotics. Rest, fluids, a chemical-free diet, and natural antivirals and immune support (see Insert on page 828) are the best treatments.

WOMEN

Female and male genitals evolve from the same embryological tissue. This makes them *homologues*: they correspond in structure, character, and usually function. The following body parts are homologues: the male penile glans and female clitoral glans; the male corpora cavernosa and female clitoris; the male corpus spongiosum and female vestibular bulbs beneath the labia minora; the male scrotum and female labia minora and labia majora; and the male foreskin and female clitoral hood. Women’s reproductive systems are more complex however, as they are built to carry children and give birth.

Not all women want to bear children or be mothers (nor should they feel obliged to), but birth control pills, popular in technologically advanced countries, are a poor choice

because they radically alter body functions. Normally, a woman ovulates when FSH (follicle stimulating hormone) from the pituitary gland stimulates the development of an egg in the ovary; the egg follicle (sack surrounding the egg) secretes estrogen; and the estrogen stimulates the uterine lining to prepare itself for a fertilized egg. As the estrogens increase, FSH output decreases, and the pituitary then secretes LH (luteinizing hormone), which stimulates ovulation, or the ejection of the egg from the ovary. Most birth control pills contain synthetic progesterone (progestin) and estrogen. These hormones deceive the body into thinking it is pregnant by flooding the system with excess hormones. The high progestin level inhibits secretions of the two pituitary hormones so that no new egg follicles develop and no ovulation occurs. Progestin also decreases the amount of endometrial tissue in the uterus so that an egg cannot implant. It's much safer, and less confusing to the body, if mechanical forms of birth control are used such as condoms, a cervical cap, or a diaphragm.

Breasts

Breasts are comprised of fat, with some connective tissue and ligaments. Although historically the female breast has been an object of (mostly male) adoration and obsession, it deserves the most credit for providing the perfect food for a nursing infant: milk, with an ideal ratio of fats, proteins, and carbohydrates. Each breast contains mammary glands that produce milk when stimulated by the hormone prolactin. For a few days before gradually producing a higher ratio of milk, the breast secretes colostrum, a rich fluid that promotes immunity in a baby. This is why it's so important for babies to nurse.

The breast contains many lymph nodes that drain into the armpit. The tissue must move freely so that wastes don't accumulate; otherwise, there will be problems (including cancer). Breasts tend to sag as women age (the ligaments that hold them up elongate), but wearing a brassiere restricts the lymph flow and in fact accelerates sagging.

Men's and women's breasts, having embryologically evolved from the same tissue, are identical in structure and function. Male breasts are simply smaller, with less developed mammary glands. Both sexes have a large concentration of blood vessels and nerves in their nipples. Also see entries under **LYMPHATIC SYSTEM**.

Breast Cancer

See under **CANCER**.

Breast Inflammation / Mastitis

A bacterial infection is usually involved. Also see other entries in this **WOMEN** section, under **TUMORS, BENIGN**, and under **CANCER**, "Breast Cancer," because sometimes benign conditions can become malignant.

654 (from Dr. John Garvey), 698

Fibroadenoma of Breast

Non-cancerous fibrous nodules in the breasts. Eliminating caffeine in common foods like chocolate and coffee may shrink the tumor or eliminate it entirely. Also see **CANCER**, "Breast Cancer"; you don't want this benign tumor to become malignant. 1384

Fibroid Cysts in Breast

Fibrous tumor filled with liquid.

Fibroma

Composed of fibrous connective tissue. Even though a fibroma is benign, you may want to use cancer frequencies to make sure it does not turn malignant.

First try: 272, 273, 660 + 690 + 727, 2127.5

Also try: 465, 802 + 1550, 2008

Menstruation and Menopause

When a female reaches sexual maturity, her body releases one or more eggs during ovulation. If the egg has not been fertilized with male sperm by the time it reaches the uterus, it does not implant in the uterine lining. Instead, the rich blood supply—prepared for the possibility of pregnancy—begins to shed, and is eliminated through the vagina via menstruation (also called a "period" or "menses"). Usually when a woman misses her period she is pregnant. However, she might not menstruate if she's stressed or very underweight with a low percentage of body fat. Both circumstances can disrupt normal hormonal function.

During the mid 20th century, females reached sexual maturity around age 13, 14, or 15. But within the last two decades, many girls have experienced the abnormal onset of puberty as early as age 7 or 8. This is due mainly to estrogen disruptors present in modern-day plastics, and in meats from animals raised on synthetic hormones.

Menopause—also called "the climacteric," "change of life," or simply "the change"—is the stage of the human female reproductive cycle when the ovaries stop producing estrogen. This leads to scanty, and then a complete end to, menstrual periods, at which point the woman can no longer have children. As the body tries to adapt to the changing hormone levels, she may experience heart palpitations and variations in body temperature (day and night sweating), known as "hot flashes." Vaginal dryness and the need to urinate may increase. She may experience depression, anxiety, irritability, and lack of concentration. This process, which occurs between ages 45 and 55, can last from six months to more than five years. Menopause can be accelerated by serious illness, poisonous chemicals, autoimmune disorders, thyroid problems, and diabetes.

To manage the symptoms of menopause, some women take estrogen replacement hormones. However, unless

the estrogen is bio-identical (like what the body itself had produced), this can exacerbate her symptoms. Natural progesterone may work better. Caucasian women, particularly of European descent, may have an increased risk of osteoporosis. This can be managed by an increased intake of magnesium and essential fatty acids, as supplements or in dark leafy greens and fish oils.

Hormonal Imbalance

Check for nutritional deficiencies. Also see entries under **LIVER AND GALLBLADDER**, *Liver* because the liver processes and removes excess hormones. If the liver isn't operating efficiently, hormones can build up and become unbalanced in the body.

50.5, 537

Hot Flashes

When the ovaries no longer produce sex hormones (which occurs during menopause), the adrenal cortex will produce those hormones in small amounts. However, if there's a huge demand by the body, the adrenals can overcompensate and produce too much sex hormone. This can result in hot flashes, which make a woman's body temperature so erratic that she alternates between sweating and feeling chilled. The longer a woman has hot flashes before she finally ceases menstruating, the longer her hot flashes will continue after the end of her cycle.

Support the adrenals with adequate rest, gentle to moderate exercise, and good nutrition. See **GLANDS**, *Adrenals*, "Adrenal Glands, to Balance and Normalize," and other entries under **GLANDS**.

537, 660 + 690 + 727, 787, 880, 10K, 40K

Menstrual Cramps

When the uterus contracts more strongly than needed to push out unneeded menstrual blood, it presses against blood vessels. This restricts the oxygen supply to the uterine muscle tissue, further causing pain. Eat real food and exercise. To relax muscles, take extra magnesium and drink amaranth seed, chamomile, and especially raspberry leaf tea.

26

Menstruation, Absence of / Amenorrhea

Also check for nutritional deficiencies and hormonal imbalances.

20, 72, 95, 125, 146, 160, 333 + 523 + 768 + 786, 444 + 1865, 465, 522, 537, 555, 660 + 690 + 727, 760, 787, 802 + 1550, 880, 3K, 10K, 40K

Menstruation, General Conditions

Also check for nutritional deficiencies and hormonal imbalances.

From Jimmie Holman. Deliver the frequencies in precisely the order written. They might not work

on units other than those manufactured by Pulsed Technologies: 59520, 56320, 53248, 51328, 50368, 49600, 46528, 40960

Also try: 465, 537, 660 + 690 + 727, 787, 802 + 1550, 880

Menstruation, Painful / Dysmenorrhea

Also check for nutritional deficiencies and hormonal imbalances.

4.9, 26, 465, 537, 660 + 690 + 727, 787, 802 + 1550, 880

Sexual Function

The ability to sexually function is more than whether a woman can climax or a man can maintain an erection and ejaculate. It is also related to one's ability to show love and respect for others, to receive love, and to freely experience pleasure without guilt or shame.

Frigidity / Impotence, many types

The word "impotence," like the word "frigidity," has negative connotations. Socially and psychologically stigmatizing, it does not address the human aspect of sexual dysfunction: feelings of devitalization, powerlessness, and emotional distance—from oneself, others, and Source. To be impotent is to be robbed of one's life force.

Impotence is generally considered a problem for men and not women, because the masculine identity is most often associated with the "performance" of keeping the penis erect during sexual activity. However, when a woman is unable to climax and enjoy herself sexually, this is as serious a problem as when a man has difficulty. In a sexual union, each person should feel enjoyment, and connect to himself / herself as well as to the partner.

Physical components of sexual dysfunction include infection. Pathogens can be passed from one partner to the other even if a male is asymptomatic. The same microorganisms in both men and women can cause symptoms that lead to sexual dysfunction.

Get a thorough checkup. Psychological counseling may be advised, particularly in cases of sexual abuse, rape, and assault. Also see other entries in this huge section, and specifically "Gonorrhea" under *Vagina*, *Labia* and *Clitoris*. Finally, see various entries under **LIVER AND GALLBLADDER**, *Liver* because the liver processes and removes excess hormones. If it's not operating efficiently, hormones can build up and become unbalanced in the body, which can lead to sexual difficulties (including the inability to climax). 1.1 + 73, 9.39, 9.4, 95, 20, 72, 95, 124, 125, 335, 465, 536, 600 + 625 + 650, 622, 660 + 690 + 727, 712, 787, 802 + 1550, 880, 2008, 2127.5, 10K, 40K (for as long as desired)

Infertility

Pollutants, chemicals, and environmental toxins such as plastics, herbicides, pesticides, and some drugs have radically decreased the sperm count in males of all species (and caused birth defects in the young). Less research has been done on the effects of toxins on women, although the drug DES is now banned because of the deforming effects on the developing embryo. Infertility has also been linked to estrogens that are routinely added to the feed of commercially-raised (non-organic) cattle and poultry. Electropollution also has a huge impact, especially if a cell phone is kept in a side pocket or one is constantly surrounded by electronics and WiFi. See “Frigidity / Impotence, many types” (above). Also see “*Ureaplasma urealyticum*” under **BACTERIA**.

Uterus, Cervix, Ovaries, and Fallopian Tubes

The uterus or womb is the “container for the baby” part of the female reproductive organs located in the pelvis, held in place by eight ligaments. The cervix is the lower, narrow portion or “neck” of the uterus, where the lower portion protrudes through the upper vaginal wall. The top end of the uterus is connected on both sides to the Fallopian tubes. Comprised mostly of powerful muscle fiber, the uterus is flexible enough to inflate to one thousand times its original size during pregnancy.

The ovaries are small oval glands in the female pelvis, perched on top of the Fallopian tubes that lead to the uterus. The ovaries have two functions: the secretion of hormones and the production of eggs. Operating via a complex feedback loop with the pituitary, other endocrine glands and the hypothalamus, the ovaries help maintain the menstrual cycle. They secrete estrogen, progesterone, and other hormones. Among other functions, these hormones regulate the appearance of secondary sex characteristics (such as breast enlargement and pubic hair growth), the production of eggs, conditions during pregnancy, and preparation for the mammary glands to produce milk. Estrogen specifically helps maintain subcutaneous fat, bone strength, and some aspects of brain function. It's not well known that the ovaries are also important for a number of functions unrelated to reproduction including digestion (indirectly), muscular strength, regulation of body temperature, and bone metabolism.

The slender Fallopian tubes (or oviducts or uterine tubes) are 2.75 to 5.5 inches (7 to 14 centimeters) long, leading from the ovaries to the uterus. When an egg is released from an ovary it enters the Fallopian tube and, pushed along by tiny hair-like projectiles called cilia, it travels to the uterus to be implanted or discarded, depending on whether or not it has been fertilized along the way. This trip can take hours or even days.

Adenoma, Cervical

See “Cervical Adenoma” in this section.

Adnexitis

See “Fallopian Tube Inflammation / Adnexitis” in this section.

Catarrh

Mucous membrane inflammation, in various places including the respiratory tract, gastrointestinal tract, eyes, and uterine area.

20, 380, 444 + 1865, 660 + 690 + 727, 787, 800, 802 + 1550, 880

Cervical Adenoma

Benign tumor of the cervix or womb. However, under certain conditions it can become malignant. You are strongly advised to see “Uterine Cancer or Tumor” and other entries under **CANCER**. Also see “Cervical Polyp” in this section.

443

Cervical Inflammation

20, 60, 72, 95, 125, 660 + 690 + 727, 740, 787, 790, 880, 5K

Cervical Polyp

A polyp is abnormal tissue growing out of mucous membrane. If these frequencies don't help, see various entries under **CANCER**, because benign tumors can grow and become malignant. Also see “Cervical Adenoma” in this section.

277, 288, 867, 687, 744

Cervical Wart

See “Wart, Venereal / Condyloma” under **WOMEN, Vagina, Labia and Clitoris**.

Cyst, Ovarian

See “Ovarian Cyst” in this section.

Endometriosis

The migration of the tissue lining the uterus (the endometrium) to outside the uterus. Sometimes, inflammation of the mucus lining the uterus, ovaries or Fallopian tubes. Normally, if no pregnancy occurs and the egg does not attach to the uterine wall, the endometrium is shed or reabsorbed (responsible for menstrual bleeding or her “period.”) Endometrial tissue outside the uterus can cause severe pain mostly in the pelvis and lower back; disabling menstrual cramps; spotting between periods; painful bowel movements or urination; nausea and vomiting; and even Fallopian tube obstruction and infertility if the condition is chronic. Endometriosis can also result from fibrous adhesions that form due to injury and surgery as well as infection and inflammation. Eliminating the adhesions with deep tissue massage may improve or entirely eliminate this condition.

Also see **VIRUSES, Herpes, all types**; “*Eurytrema pancreaticum* / Pancreatic Fluke,” “Fluke, Liver (unspecified),” and “General (unspecified)” under **PARASITES, PROTOZOA AND WORMS**; “Uterine Cancer or Tumor” under **CANCER**; and the many entries under **WOMEN, Vagina, Labia and Clitoris**.
620 (from Dr. Garvey), 246, 800, 802 + 1550, 1552

Fallopian Tube Inflammation / Adnexitis

Sometimes the ovaries are inflamed as well.

From Dr. John Garvey: 440, 441, 522, 572, 3343, 3833, 5312.

Fibroma

A benign tumor of fibrous connective tissue. Also try cancer frequencies; you don't want a malignancy.
465, 660 + 690 + 727, 802 + 1550, 2008, 2127.5

Ovarian Cancer

See under **CANCER**.

Ovarian Conditions, General

20, 26, 444 + 1865, 465, 600 + 625 + 650, 660 + 690 + 727, 776, 787, 802 + 1550, 832, 880, 1500, 1600, 1800, 2008, 2127.5, 2170, 2489, 2720

Ovarian Cyst

An ovarian cyst is a sac containing a liquid in the ovary. Benign tumors can become cancerous, so also see the many entries under **CANCER**.

567, 711, 982, 31424, 36288, 45504

Ovaries, Inflammation

See “Fallopian Tube Inflammation / Adnexitis” in this section.

Pelvic Inflammatory Disease (PID)

A general term for an infection including the Fallopian tubes, ovaries, and/or uterus. PID is sexually transmitted. Symptoms may include pain in the bladder, vagina, urethra or lower back; irregular menses; vaginal discharge; sudden fevers and chills; and other infection indicators. *Neisseria gonorrhoeae*, which causes gonorrhea, is often involved. If the infection spreads to the upper genital tract, it may be more difficult to eliminate. PID makes 10% of all women infertile. Also see “Vaginitis” and “Gonorrhea” under **WOMEN, Vagina, Labia and Clitoris**; “Fallopian Tube Inflammation / Adnexitis” in this section; and “Uterine Cancer or Tumor” under **CANCER** because *Chlamydia trachomatis* PID may also be associated with increased incidence of ovarian cancer. Cervical cancer is also associated with *Chlamydia trachomatis*, although the presence of *Chlamydia* does not by itself indicate that the tissue is cancerous.

14, 72, 95, 428, 444 + 1865, 450, 465, 522, 590, 600 + 625 + 650, 660 + 690 + 727, 776, 787, 802 + 1550, 1600, 1770, 1800, 2008, 2127.5, 2170, 2720, 2489

Sex Gland Fever

20, 10K, 40K (for as long as desired)

Testosterone Levels, to Normalize (Women Only)

Testosterone is not a “male” hormone any more than estrogen is a “female” hormone. Both males and females have all the hormones, but in different ratios.
1445

Uterine Tumor / Myoma

Comprised of muscle tissue, this tumor is often (though not always) on the uterus. The frequency 127 is also included in case the tumor is malignant. You are strongly advised to also use the many entries under **CANCER**.

127, 253, 420, 453, 689, 832

In addition, sweep from 420 to 482 for at least 30 minutes

Uterus, Prolapsed / Dropped or Tipped

Aside from possible cultural bias that women's bodies must be a certain way, there is some validity to this diagnosis. Sometimes a woman's uterus is not properly supported by the surrounding muscles, or else the ligaments are weak. The resultant sagging or “dropping” can cause pain, discomfort, irregular menses, urinary or fecal incontinence, and a lack of support for the spine.

9.1, 110

Vagina, Labia and Clitoris

The vagina is interior—a muscular, membranous tube that forms a passageway between the internal uterus and external orifice. The visible outer vulva contains many sweat glands and is covered with hair. The inner labia (lips), containing delicate mucous membrane, surround the outer portion of the clitoris. The outer clitoris is a very small head (bulb) or glans, analogous to the head or glans of the male penis, and richly endowed with highly sensitive nerves. The full clitoral structure is actually quite large (about 4 inches or 9 cm long): a pair of legs and a pair of bulbs extend from the head, and sit invisibly behind the vulva on either side of the vagina. The entire clitoral structure becomes erect when a woman is aroused. About four-fifths of the female population cannot have an orgasm unless the head of the clitoris is stimulated.

The urethra, the tube leading to the bladder, has a separate opening through the inner labia and is very close to the vaginal opening. With such a complex structure, it's not surprising that inflammation or infection in a woman can affect many systems, both internal and external.

Most women have vaginitis at some point in their lives. Infections are usually accompanied by discharge, itching, irritation, burning on urination, and pain during sexual intercourse or other genital activity. Many pathogens can cause this condition.

The vagina is naturally acidic. Infections may occur if the vagina becomes alkaline—either from soaps, or the natural alkalinity of seminal fluid (which enables sperm to survive their trip up the acidic vagina to the uterus long enough to become implanted). You can help restore the terrain with a douche (see Sidebar, “Effective Natural Vaginal Douche”). However, if the vaginal tissues are very inflamed and sensitive, douching may aggravate the problem because it eliminates the secretions that help keep the delicate mucous membranes moist. Listen to your body and use the protocol that feels the best.

Castor oil, delivered into the vaginal tract with a clean pipette, can soothe and heal the tissue. It also confers some germicidal benefits (see Sidebar, page 846).

Genital infections can migrate to the urinary tract, so Also see “Bladder Infection / Inflammation with possible Urethra involvement” under **URINARY TRACT, Bladder and Urethra**.

General

1.2 + 250, 9.39, 9.4, 20, 72, 95, 125, 414, 444 + 1865, 464, 465, 542, 600 + 625 + 650, 642, 652, 660 + 690 + 727, 776, 784, 787, 800, 802 + 1550, 832, 845, 866, 880, 942, 1500, 1600, 1800, 2127.5, 2170, 2720

Candida

This inflammation causes vaginal discharge that is white and cheesy, and often irritating to the point of burning. Often, vaginal *Candida* is originally a gut problem: any overgrown fungal colonies in the digestive tract can easily puncture the colon wall and migrate into the vagina. This infection is common in women who have taken antibiotics, as the drugs destroy the beneficial bacillus in the vaginal and digestive tracts that ordinarily keep the *Candida* population low. Besides douching (Sidebar, this page), reintroducing beneficial flora into the vagina via a douche can also help, as well as taking the same flora orally. *Candida* can be passed between sexual partners, and without proper care can be difficult to eliminate. The woman's partner must be treated too. See “*Candida albicans*” under **CANDIDA, FUNGI, MOLDS AND YEASTS**.

Chlamydia pneumoniae

Run each number for 5 minutes.

Program 1: If your unit can't do decimals, round up or down to the nearest number. 4710.5, 470–472, 479, 620, 940.1, 942.9, 1880.1, 1885.9, 3760.3, 3771.7, 7520.5, 7543.4

Program 2: 471, 942, 1886, 3772, 7543

Effective Natural Vaginal Douche

The foundation of a douche is acidic water, which supports the inherent low (acidic) pH of the vagina. Acidic water is made either with a water electrolysis unit (see Chapter 3), or half an ounce of white or clear filtered apple cider vinegar in about 16 ounces (half a liter) of pure clean water. To that, you may add:

- ◆ **Liquid (Elemental or Lugol's) Iodine.** Use 2–5 drops.
- ◆ **Grapefruit Seed Extract.** NutriBiotic® is by far the purest and most effective brand. Use 2–5 drops.

Infections can be prevented by douching after sexual intercourse, or after being on the toilet where wiping has brought *E. coli* too close to the vaginal opening.

Chlamydia trachomatis

A sexually transmitted bacterium that can cause urethritis (inflammation of the urethra or urinary tube), proctitis (inflammation of rectum and anus), and conjunctivitis (inflammation of the eye), as well as lymphogranuloma venereum (venereal disease featuring inflammation and ulceration of the lymph glands). If not treated, an infection may result in miscarriage and infertility in women. It can be passed to infants in the birth canal, causing eye infections and pneumonia. This microorganism may play a developmental role in cancer and Multiple Sclerosis, so see a doctor. Also see “*Chlamydia pneumoniae*” and “Lymphogranuloma venereum (LGV)” in this section.

From Dr. John Garvey: 430, 620, 624, 840, 2213
Also try: 430, 555.7, 866, 1111.4, 2222.8

From Dr. Hulda Clark. Use the Hz set for units unable to output KHz. With such a wide frequency range, you may want to sweep.

KHz set: 379700 (lowest), 381K (optimal), and 383950 (highest)

Hz set: 941.18 (lowest), 944.40 (optimal), and 951.72 (highest)

Also from Clark: 18968.87

Gardnerella

Bacteria that infect and inflame the vaginal mucus membrane lining.

782 (from Dr. Garvey), 320, 329, 485, 695, 995

From Dr. Hulda Clark. Use the Hz set for units unable to output KHz. With such a wide frequency range, you may want to sweep.

KHz set: 333K (lowest), 340K (optimal), and 342550 (highest)

Hz set: 825.42 (lowest), 842.78 (optimal), and 849.10 (highest)

Also from Clark: 16927.60

Castor Oil for Delicate Tissue

Castor oil soothes, softens, and heals the delicate inflamed membranes of the vagina, labia and clitoris. It also discourages the growth of pathogens. Use organic castor oil that's hexane-free and solvent-free. To apply it inside the vagina, use a disposable pipette made of thin flexible plastic—the kind used to transfer essential oils and other fluids from one bottle to another. If the pipette isn't marked sterile, spray the outside of the pipette first with 3% food grade hydrogen peroxide and wipe dry with a clean cloth. Wear sanitary pads to catch the drip from the viscous oil. It's messy, but it does a great job of healing the tissues.

Gonorrhea

Neisseria gonorrhoeae causes the sexually transmitted gonorrhea. Symptoms include inflammation of the genital mucous membrane and painful urination. There may also be inflammation in the joints and in the mucosa of the eyes, mouth and rectum. Infection can exist on a sub-clinical level. Although men usually experience burning during urination with perhaps drip or discharge from the penis, many women do not feel symptoms. *Neisseria gonorrhoeae* has become resistant to pharmaceutical antibiotics. If untreated, the infection can migrate to other areas and cause arthritis, cystitis, pelvic inflammatory disease, and endocarditis.

From Royal Rife, possibly used on his #4 machine: 233K

600 + 625 + 650, 660 + 690 + 727, 712

From Dr. Hulda Clark. Use the Hz set for units unable to output KHz. With such a wide frequency range, you may want to sweep.

KHz set: 333850 (lowest), 334K (optimal), and 336500 (highest)

Hz set: 827.53 (lowest), 827.90 (optimal), and 834.10 (highest)

Also from Clark: 16628.88, 927.90

Herpes

See the many detailed entries for *Herpes* under **VIRUSES**, *Herpes*, all types.

Irritation, General

The mucous membranes of the vagina, labia and clitoris can become irritated due to pathogens, an unbalanced pH, or friction. Douche with acidic water (see previous page) to discourage pathogens. Friction can result from lots of sexual activity in a short period of time or from a small amount of sexual activity after a long hiatus. If the vagina is still irritated after an infection has been eliminated, apply castor oil (see Sidebar, above). For infection, see the pathogen's listing.

Jock Itch

Peeling skin, irritation and itching in the groin and genitals caused by *Epidermophyton floccinum*, a fungus that attacks skin, nails, and also the feet (where it is called athlete's foot). The fungi that attack the skin are often interchangeable and do not confine themselves to one area. Also see, under **CANDIDA, FUNGI, MOLDS AND YEASTS**, the various *Trichophyton*, *Microsporon* and *Microsporum* entries, "*Candida albicans*," and "General Fungus / Molds / Yeasts."

644, 766 (both from Dr. John Garvey), 856 (from Dr. Richard Loyd), 20, 345, 465, 634, 660 + 690 + 727, 784, 802 + 1550, 880

Leukorrhea

See "Vaginitis" in this section.

Lymphogranuloma venereum (LGV)

A venereal disease caused by *Chlamydia trachomatis*. Symptoms include inflammation, and enlargement and ulceration of the lymph glands in the groin area. First try: 552, 1522, and 430, 555.7, 620, 624, 840, 866, 2213, 1111.4, 2222.8.

If that doesn't work, try: 4710.5, 479, 620, 940.1, 942.9, 1880.1, 1885.9, 3760.3, 3771.7, 7520.5, 7543.4 (for *Chlamydia pneumoniae*)

Papilloma Virus / Human Papilloma Virus (HPV)

Causes warts and benign skin tumors with branches or stalks, and sometimes white patches.

907, 30250, 173210, 301800, 402850, 410700, 475470, 2976935

Also try: 45, 110, 265, 404, 466, 489, 767, 1011, 1051, 5667, 9258, 9609

From Dr. Hulda Clark. Use the Hz set for units unable to output KHz. With such a wide frequency range, you may want to sweep.

KHz set: 404700 (lowest), 405K (optimal), and 406750 (highest)

Hz set: 1003.15 (lowest), 1003.89 (optimal), and 1008.23 (highest)

Also from Clark: 20163.76, 20128.91, 1002.16

Scar Tissue

Vaginal scar tissue can have many causes: childbirth, surgery, scratching from a fingernail, or even an abrasive form of birth control. The delicate mucous membranes can be healed with castor oil (see Sidebar, this page). Don't rely solely on frequencies! 190, 660 + 690 + 727, 760, 776, 787, 880, 802 + 1550, 2170, 2720

Smegma

An unhealthy, smelly buildup of the fatty secretion from the skin between the clitoris and inner labia. Keep the area clean, using mild soaps.

153, 180, 638

Syphilis

Highly infectious disease that can cause lesions in the sexual organs, fever, headache, swollen glands, rash on the hands and feet, and ultimately blindness, heart disease, and insanity if not treated. Syphilis is insidious because the pathogen enters the bloodstream during sex and can go anywhere in the body. Within 10 to 90 days after infection, a sore may appear on or around the sex organs, rectum, or mouth. Syphilis can exist on a subclinical level. If untreated in pregnant women, it can cause birth defects and even death to the baby. Women with chronic vaginal discharge, or men and women with so-called sexual dysfunctions, might want to try syphilis frequencies if other numbers aren't working. From Dr. Marty Monahan: 900, 789, 650, 625, 660, 511, 641, 633, 640, 827, 885

Also try: 600, 690, 727, 20, 120, 177, 658, 700, 902
From Dr. Hulda Clark. Use the Hz set for units unable to output KHz. With such a wide frequency range, you may want to sweep.

KHz set: 346850 (lowest), 347K (optimal), and 347400 (highest)

Hz set: 859.76 (lowest), 860.13 (optimal), and 861.12 (highest)

Also from Clark: 17276.11

Torulopsis glabrata

A yeast that may appear in vaginal infections. Also see, under **CANDIDA, FUNGI, MOLDS AND YEASTS**, "*Cryptococcus neoformans*" and other fungal forms.

522, 2121

Trichomonas vaginalis

An aerobic protozoan parasite usually found in the vagina, causing itching, burning, and foul-smelling discharge. Although a woman is generally more symptomatic than a man from this infection, the man should be treated because the parasite lodges in his genital-urinary tract and can be repeatedly passed between sexual partners.

Black seed (*Nigella sativa*) extract has been successfully used. Also douche (see Sidebar, page 845).

From Dr. Marty Monahan: 155, 447, 448, 450, 962

Also try: 610 + 692 + 980

Female Genital Mutilation Increases in the United States

Female genital mutilation (FGM) is sometimes called "female circumcision" to make it appear less drastic than it actually is. The clitoris is completely or partially cut off, and in one-tenth of cases, the inner and outer labia are as well. This ritual cutting is done with a razor, scissors or piece of sharp bamboo, and without any anesthetic. If the opening to the vagina is sewn or stapled shut, a small hole is left to allow menstrual blood and urine to pass through. (The hole is opened to allow for sexual intercourse and childbirth.) The terrified, screaming girls who are forcibly restrained to undergo this extremely painful, traumatic procedure are usually between 4 and 12 years old.

There is no medical necessity for this procedure, but there are many religious justifications. One reporter, present at a female "circumcision" ceremony in 2006 where hundreds of girls were attacked and wounded, quoted a prominent Muslim leader as saying, "It is necessary to control women's sexual urges. . . . They must be chaste to preserve their beauty."⁷²

One type of FGM, states Taina Bien Aime, director of the Coalition Against Trafficking in Women, is like "removing a male's testes," while another type "is equivalent to removing both the testes and the penis. There is no way that would be deemed acceptable."⁷³ Immediate problems from FGM include agonizing pain, severe bleeding (a given), infection—leading to fever, shock and death if the infection is untreated—and burning and pain on urination. Long-term physical repercussions include severe pain during sexual intercourse or complete loss of sensitivity; the inability to feel pleasure; infertility; and complications for both mother and infant during childbirth. Emotionally, the scars are lifelong: the loss of safety, lack of trust, and inability to enjoy one's body. There's no way to know how many girls and women have died from FGM because few records are kept.

FGM is banned by several international treaties, but it's still regularly done in over thirty countries, mostly in Africa, Asia, and the Middle East. The practice is now spreading to some countries in South America, and even to Australia, parts of Europe, and North America—including the US, among immigrant populations from Africa and the Middle East.

The US government rightly regards FGM as child abuse and torture. Legislators are trying to pass laws that make it a felony, punishable by up to 15 years in prison—both for doctors who perform the procedure, and parents who transport a girl for that purpose. The World Health Organization (WHO) estimates that more than 200 million girls and women alive today have suffered genital mutilation.

From Dr. Hulda Clark. Use the Hz set for units unable to output KHz. With such a wide frequency range, you may want to sweep.

KHz set: 378K (lowest), 381K (optimal), and 383600 (highest)

Hz set: 936.97 (lowest), 944.40 (optimal), and 950.85 (highest)

Also from Clark: 18968.87

Vaginismus

Involuntary pelvic muscle contractions causing intense pain, often during sexual intercourse or a gynecological examination that requires the insertion of a speculum. The pain is usually due to a spasm of the pubococcygeus (PC) muscle, although other vaginal muscles can be involved and pain is sometimes felt in the urethra too, especially during urination. Medical opinion largely agrees that the cause is psychological, but there may also be microbial involvement. See “Vulvodynia / Vestibulodynia” in this section, as the approaches and treatments are the same.

Vaginitis

Inflammation of the inside of the vagina and sometimes the vulva, often accompanied by discharge, itching, irritation, burning on urination, and pain during sexual contact. Douche (see Sideber, “Effective Natural Vaginal Douche,” page 845), and if necessary, use castor oil afterwards to soothe and heal the tissues (see Sidebar, “Castor Oil for Delicate Tissue,” page 846). Below are general frequencies for common (unspecified) pathogens. If you know the precise pathogen involved, see that particular entry. Fungus is present in the majority of vaginitis sufferers, so see “*Candida albicans*” under **CANDIDA, FUNGI, MOLDS AND YEASTS**. Also see “*Ureaplasma urealyticum*” under **BACTERIA**.

1.2 + 250, 9.39, 9.4, 20, 72, 95, 125, 414, 444 + 1865, 465, 542, 600 + 625 + 650, 642, 652, 660 + 690 + 727, 776, 784, 787, 800, 802 + 1550, 832, 845, 866, 880, 942, 1500, 1600, 1800, 2127.5, 2170, 2720

Vulvodynia / Vestibulodynia

A burning pain at the opening (vestibule or introitus) of the vagina, and sometimes farther up the birth canal to the opening of the cervix. This pain impacts the ability to have pleasurable sexual intercourse and other forms of vaginal sex, and also make it impossible to insert a tampon. The pain may also interfere with other daily activities, such as rigorous athletic activity, standing, or even sitting. The tissues of the clitoris and vagina feel tender to the touch, either constantly or intermittently.

Conventionally trained doctors say that they don't know the cause. However, certain triggers should be checked, including localized vaginal yeast or other infections. This includes infections that have been treated with medications, because sometimes the medications simply drive the infection more deeply into the body without actually eliminating it. Other triggers include contact dermatitis from tampons, panty liners, detergents or inappropriate douches; vaginal surgery; or injury from childbirth.

One common cause is fear, anxiety, suppressed terror, or suppressed rage, emotions commonly resulting from childhood sexual abuse, adult rape, or even the witnessing of invasive and abusive behaviors (not necessarily sexual). Sexually repressive upbringing can also play a role, which causes the woman to feel disgust or revulsion towards her body and sexuality. Modern medicine prescribes painkillers and antidepressants. However, gentle physical healing protocols and emotionally-based therapies are more appropriate (and effective). Psychotherapy should focus on learning how to trust, having a positive body image, and the ability to surrender mental and physical control and feel pleasure.

Kegel exercises improve muscle tone and allow for a higher tolerance of sensation in the vaginal tract: Squeeze the same muscles used to stop urination, hold the muscular contraction for two seconds, relax muscles, and repeat the cycle several times. The gentle insertion of a well-lubricated finger follows, as appropriate. Smooth cylinders of a larger diameter (dildoes) can be gradually added, according to ease and comfort.

Another surprisingly common cause of vulvodynia is spasms of ligaments or muscles in the pelvis, which spasm due to either a displacement of the tailbone, or a tight psoas muscle (the very long muscle from the mid-spine to the bottom of the pelvic structure). A misaligned pelvic bone might be involved, along with a displaced uterus or urinary bladder. Some gynecologists and chiropractors can examine and adjust these sensitive areas. A chiropractic pelvic bone adjustment—typically done through the subject's hand, which covers the bone—can correct not only vaginal constriction, but also straighten the entire posture. A very few practitioners do soft tissue manipulation, which may involve adjustments through the vagina or anus.

To address pathogen involvement, see infection entries in this section.

Wart, Venereal / Condyloma

Benign but very painful, sometimes bleeding tumors with a branch or stalk and occasionally white patches, caused by the *Papilloma* virus. Men do not feel

the negative effects of venereal warts as strongly as women do. In women, if this condition is not eliminated it can lead to cervical cancer. Also see frequencies for “Wart, Plantar,” under **SKIN**.

First try: 110, 767 (both from Dr. John Garvey), 45, 265, 404, 446, 466, 489, 660 + 690 + 727, 874, 907, 1011, 1051, 2127.5, 5657, 9258, 9609

From Dr. Hulda Clark. Use the Hz set for units unable to output KHz. With such a wide frequency range, you may want to sweep.

KHz sets:

402850 (lowest), 407K (optimal), and 410700 (highest)

404050 (lowest), 404300 (optimal), and 404600 (highest)

Hz sets:

998.57 (lowest), 1008.85 (optimal), and 1018.02 (highest)

1001.54 (lowest), 1002.16 (optimal), and 1002.90 (highest)

If the above frequencies don't help, try these: 173, 466, 495, 644, 767, 787, 797, 877, 907, 915 (for 30 minutes), 918 (for 30 minutes), 953, 1500, 1600, 1800, 2008, 2170, 2720, 2489

Yeast Infection

This inflammation causes vaginal discharge that is white and cheesy, and is often irritating to the point of burning. It is common in women who have taken antibiotics, can be passed between sexual partners, and without proper care can be difficult to eliminate. Also see the frequencies for *Candida* in this section as well as “*Candida albicans*” under **CANDIDA, FUNGI, MOLDS AND YEASTS**.

72, 422, 582, 706, 771, 787, 788, 1016, 2222

Emotional Flexibility Helps Prevent Illness

We can use the skills of coping and adapting to bring about changes that will make us happier and healthier . . . We can cope by broadening our social networks, forming a diverse set of friends, family, and colleagues so as to build a healthier balance of dependence and interdependence. This gives us a greater sense of belonging as well as a sense of safety and security. We can also create changes by adapting—that is, by changing ourselves to fit the world better. We can look inside ourselves and work to change qualities in ourselves so that we're better able to withstand stresses and assaults from the outside world. . . .

Researchers looked at two groups of business executives: both were highly stressed, but one group exhibited a high instance of illness whereas the other group had no illnesses. The scientists found that the individuals with high stress and no illness had a strong commitment to themselves, had a vigorous attitude toward the world around them, looked for meaning in the events that took place, and believed that they had some control over every situation. The executives who succumbed to illness, on the other hand, felt powerless, were nihilistic, and believed they had little or no control over what happened to them. . . .

Healthy people accept change and view it as a challenge and an opportunity to grow. When faced with stress, they may feel hopeless and helpless for a moment, but they will pick themselves up and go into action. . . . The key is balance.

Creating a Better World, Inside and Out

INTRODUCTION

Rife technology is about life and overcoming illness. But any genuine discussion of healing must also address the reality of death. After all the clinical trials are published, data is analyzed, anecdotal reports are offered and advice is given, some deaths are inevitable. Despite your or my best efforts, within our circle of family, friends, lovers, acquaintances and colleagues, someone will not wake up to see the sun rise tomorrow.

Most people view death as the cessation of life in the physical body. But death can express itself in different ways, even among the living. Take emotional numbness. The living can also experience a sort of death: the death of emotional expression. Sometimes, to protect ourselves from feeling too much pain, we barricade ourselves against any and all emotions, pleasurable or not. Yet hiding diminishes us. When we hide who we truly are, we cannot connect with ourselves or with others. Perhaps this is the worst kind of death. But in hiding, we disconnect—not only from others, but from ourselves.

Feelings of connection helps us feel secure. Beginning with family, they extend to community and country. Being connected is essential to our health and sense of well-being. In fact, a sense of belonging is fundamental to our very identity. It's threaded through the cellular memory of our bodies—from the cytoplasmic matrix that joins together all of our cells, to the tiny particles that flash, in an elaborate orchestrated dance, within our atoms.

The interconnecting functions in all living systems point to the need for holistic therapies. Holistic therapies heal by helping to reestablish the functional relationships between all the aspects of a system. Thus, healing at its deepest level may be described as the awakening, affirming, and energizing of connections that have been submerged or lost. In many ways, the process of healing is the process of becoming more aware.

Awareness can manifest in many ways: physical, emotional, mental, energetic. It also happens in stages. Usually, we're more aware of the overtly physical changes that occur in us than the emotional, or the even more subtle energetic changes.

One of the most powerful waves of recent awakening, health-wise, came with the birth of the self-help movement in the 1960s. People were not simply interested in getting an education, a good job, and having a home and family. They wanted to explore their deeper desires and dreams. Sometimes this knowledge of self came at a price. It meant separating from people whose paths were different from their own. But still, more and more people were willing to depart from what was expected of them, finding new meaning in the discovery of their inner lives.

Revelations in the personal sphere led to an understanding of the bigger picture. There was a slogan in the early 1970s from the second wave of the women's liberation movement: "The personal is political." What feminists were referring to were the invisible social and political forces that shape our lives. The less obvious these

forces were, the harder it was to see that our problems were not unique to us as individuals. Politically awakening people became aware of how laws and social customs too often dictated how they related to themselves and to others. What previously had seemed like personal shortcomings were now being recognized as constraints imposed by globally orchestrated forces to keep the world's citizens ignorant, alienated, and powerless—the precise characteristics that allowed people to be easily controlled by outside forces.

Instead of succumbing to despair and lethargy, however, many people started to realize that they could gain strength from being kind to and connecting with others, even those radically different from themselves. The understanding and soul-searching that had been catalyzed by the self-help movement was now beginning to include a larger sphere outside of the self, as people all over the world united to dismantle the global plague of greed and fear and replace it with compassion and trust.

Despite some beneficial changes created by this global political consciousness, people were still hungry for a sense of oneness with something larger than themselves. When I was working as a singer-songwriter and later as a body-mind psychotherapist, in my conversations with others the theme that kept repeating was a longing for this bond. The connection that my audiences, clients, and friends told me they wanted seemed to be of cosmic proportions. People were starting to recognize what most ancient traditions had affirmed for centuries: *The divine without is the same as the divine within*. Another name for this all-encompassing connectedness is *spirituality*.

Spirituality is not always the same as religion, although the two can overlap. Religion is a cultural system of designated behaviors and practices, imbued and indoctrinated through formal instruction that's not meant to be questioned. It promotes codes of behavior based on written or unwritten rules, overseen by an institution or its representative. Religion is always structured so that its adherents rely on an intermediary from the governing body to impart a sense of connection to something beyond themselves. Spirituality, on the other hand, is not mediated by another person or institution. Originating from within, its expression does not depend on formal teachings. One can find inspiration from many sources—which may or may not include religious principles—but the codes of behavior for dealing with others spring from one's own conscience and sense of values, rather than from prescribed doctrine or any other external source. In either system, when a deep connection is felt, great healing can occur.

A patient grants you the gift of trusting you with their lives, and there is no room for mistakes.

—Alberto Quinoñes-Hinojosa, MD,
neurosurgeon, quoted in
The New York Times May 13, 2008

This chapter was written to explore the possibilities of multi-dimensional healing, under circumstances ranging from the mundane to the extraordinary. You might view the three chapter sections—**The Personal**, **The Political**, and **The Transcendent** (sometimes known as *transpersonal*)—as the evolution of one human being (me). However, this is also a progression that I have often seen occur with other individuals and large groups.

The Personal is designed to help those who are dying to manage their fear of death, and to help the survivors face any fears of being left behind and to gracefully maneuver through the grieving process. **The Political** addresses the issues that continue to affect us on a global level after we have moved through the rawest, most painful stages of our mourning and dried our tears. **The Transcendent** discusses the quantum nature of consciousness that in some ways is even more “real” than the personal and political realms. Once we open to the boundless energetic universe in which we live, two changes can occur. We more easily navigate the difficult social and political forces that impact our lives. And we can heal in profoundly transformative ways.

THE PERSONAL

The Trauma of Illness and Death

When I mention Rife Therapy to seriously ill people, they always want to know: “Do the frequencies *really* work? What's the success rate for the terminally ill?” Of course what they're really asking is, “What are *my* chances? Can you guarantee that *I* [or a loved one] will be cured?” While I feel compassion for them, I can only reply, “I don't know what your chances are. There are no guarantees of anything.” The refreshing success rate for electromedicine in general and Rife Therapy in particular—compared to a less than 3% success rate for chemo and radiation—does not guarantee that *their* life will be saved. Besides, all the data in the world does not address our emotional needs. To most people, death is an unknown quantity. And the unknown can be very scary.

The relatives and friends of the seriously ill are afraid, too. They ask me the same questions, demand the same guarantees. They want to bypass their grief (or guilt) if a loved one dies. They're reminded of their own mortality as they grapple with the inevitability of their loved one leaving them. And they want to be spared the trauma of

grief if, after allowing themselves to hope that rifting will work, their loved one dies and they end up having to face loss anyway. It can feel like a bigger loss to have their hopes kindled and then extinguished, than if they had not even dared to hope at all. Not surprisingly, the people who try to protect themselves from disappointment are sometimes the most vocal critics of Rife Therapy. Afraid of being deceived and disillusioned, they end up dismissing it yet at the same time refuse to investigate its potential.

Most people in technologically advanced cultures are taught that death is separate from life, to be despised and feared. There are few role models for how to cope with (or tell someone about) a loved one's imminent or recent passing. Most of us don't learn how to fully give in to the grieving process during this time. We feel pressured to be upbeat and smiling, even though grieving can take years. People mourning a fresh loss usually don't have the energy to engage with the outside world. Yet too often, they try to push themselves into activity before they're ready. In fact, they go out of their way to hide their pain and sadness because they're afraid of being impolite or a burden to others. The best thing mourners can do is be gentle with themselves, and not force themselves to feel or behave in any particular way. (See Sidebar, "How People Die.")

"Shattering Eight Myths About Grief" from the Hospice Foundation of America may give you some solace when it's your turn to mourn.

Myth 1: We only grieve deaths.

Reality: We grieve all losses.

Myth 2: Only family members grieve.

Reality: All who are attached grieve.

Myth 3: Grief is an emotional reaction.

Reality: Grief is manifested in many ways.

Myth 4: Individuals should leave grieving at home.

Reality: We cannot control where we grieve.

Myth 5: We slowly and predictably recover from grief.

Reality: Grief is an uneven process, a roller coaster with no timeline.

Myth 6: Grieving means letting go of the person who has died.

Reality: We never fully detach.

Myth 7: Grief finally ends.

Reality: Over time, most people learn to live with loss.

Myth 8: Grievors are best left alone.

Reality: Grievors need opportunities to share their memories and grief, and to receive support.¹

Some bereavement counselors teach that the ideal goal is to eventually detach enough not to grieve. Although this approach does have some merit, it's important not to confuse detachment with stifling or denying the pain. The previous guidelines are still useful to help us express our grief, so we can more quickly process our pain and be at peace with loss.

What To Say and What Not To Say to Someone Who's Grieving

People who are in a position to offer support and comfort to mourners often don't know how to reach out, even though they want to. They might try to distract the mourner from strong emotions—either because they think this is the best way to handle death, or they're uncomfortable with emotional intensity and don't want to get triggered themselves. Or, they don't want to think about their own impending death or the deaths of their own loved ones.

Some people offer remarks that are meant to comfort, but which don't help the person who's grieving. In fact, the remarks are well-meaning platitudes that usually make the mourner feel worse. The mourner, not wanting to hurt the feelings of the person who's trying to comfort—or afraid to destroy a potential source of comfort—is too polite, grief-stricken, or dispirited to object.

How People Die

Allopathic medicine alienates—not only due to its medical protocols, but also its treatment of those who are dying. The authors of "Death by Medicine" write that senior citizens "have accepted the overriding assumption from allopathic medicine that aging and dying in America must be accompanied by drugs in nursing homes and eventual hospitalization with tubes coming out of every orifice."² However, according to a nationwide poll, almost 90% of Americans would prefer to be cared for (and die) in their homes if faced with a terminal illness. In the past few decades, the hospice movement has stepped in to fill this vital need.

Hospice care is focused on pain and symptom management. Many hospice environments are set up in the subject's home, with nurses and other personnel assisting family members in the physical care of the dying person. Although hospice can be a physical place, it began as a concept: to care for the dying in ways that maintain their dignity and help them focus on quality of life. This involves providing emotional and physical support to the dying without trying to artificially prolong life or hasten its end. Bereavement support for the person's family before and after death is also provided.

What are some of these unhelpful clichés?

- ◆ “At least she lived a long, full life.”
- ◆ “Cheer up. He wouldn’t want you to be sad.”
- ◆ “There’s a reason for everything.”
- ◆ “He’s in a better place.”
- ◆ “She was such a good person, God wanted her to be with him.”
- ◆ “Time heals all wounds. Focus on the blessings in your life.”
- ◆ “Think of all the wonderful memories; they’ll bring you peace.”
- ◆ “I know how you feel.”
- ◆ “It’s been awhile since s/he died. It’s time to get over it.”

Even if one of the sayings above might be true, it’s not what the mourner needs to hear. Instead, you might say:

- ◆ “I’m so sorry for your loss.” However, this phrase has become so overused, a better choice might be, “I’m so sorry that you are going through such a difficult time.”
- ◆ “I imagine [*not* “know”] that your life without them will be difficult.”
- ◆ “Tell me more about what’s been going on for you.”
- ◆ “You, your family, and your loved ones are in my thoughts.”
- ◆ “I hold the intention for you to heal rapidly, easily and completely from your loss.”
- ◆ “I am here for you.”

Sometimes, what the mourner needs is compassionate listening, what psychotherapists commonly call “holding space.” Or the grieving person may want the simple presence of a caring other, with no words exchanged.

There are many ways to help. Some people benefit from practical, tangible assistance, such as being given home-cooked meals or assistance sorting through the deceased’s personal items. Other people require emotional understanding. Ask the person what his or her needs are. Even if she doesn’t know, she will feel better knowing that you cared enough to ask. Sometimes, a grieving person doesn’t even know what he needs. Or he’s unable to ask for what he needs. This is a time to be proactive and tell the mourners what you’d like to do for them, and when, rather than waiting to be asked.

Grief takes an enormous toll on the body. This emotion occurs simultaneously with the many hormones that are released through a chain reaction of triggers and responses. The hypothalamus secretes a hormone that stimulates the pituitary to release ACTH (short for *adrenocorticotrophic hormone*). ACTH circulates through the bloodstream to the adrenal glands, which in turn circulate several hormones that include the stress-related *glucocorticoids*. *Glucocorticoid hormones suppress immune function*. If secreted in large amounts over a long period of time, they can cause the thymus gland to shrink. At the same time, the person may feel exhausted, and even experience muscle wasting—a breakdown of bodily proteins that is a literal demonstration of how someone can be “eaten alive” by sorrow. These conditions set the stage for all kinds of autoimmune conditions. This is why it’s common for spouses to die within a year or two of each other. As one author writes, “If we want to be fully present, to honor what we have lost and to give grief its due, we need the physical stamina . . . [and] to be supported physically if we are to successfully complete our healing journey. . . . Glucocorticoids are the physiological messengers sent by a broken heart.”³

The Five Stages of Dying

Many Western cultures lack meaningful rituals that acknowledge the dying person’s life, their approaching or concluded death, and the effects that the death will have on the living. In 1969, Swiss psychiatrist Elisabeth Kübler-Ross revolutionized care for the dying with her now classic book, *On Death and Dying*. This remarkable work describes five stages of dying, which Kübler-Ross recognized from interactions with thousands of terminally ill clients. Although these stages are listed as a progression, as though one were peeling an onion, people may not always experience them neatly in sequential order—and in fact, they may vacillate many times among any of the stages. Nevertheless, understanding the emotions that people undergo (in whatever order) when faced with their own death, is healing for both the dying and for those they leave behind. It helps the dying become more self-aware. It allows their friends and relatives to better assist them (and to perhaps more easily manage their own feelings). And it gives those who remain behind a glimpse of what they might expect for themselves. Keep in mind that Kübler-Ross’s five-stage model relates specifically to the dying rather than to the living who are grieving, although there may be an overlap. Also, this model pertains to those who are ill, rather than to those whose deaths are unexpected (such as from a sudden accident or natural disaster).

Denial and Isolation

The first response is usually, “No, this cannot be happening to me; it must be a mistake! Those tests must belong to someone else.” This denial exists to help the person handle the shock and adjust to the idea of imminent sorrow and loss. The person might attempt to isolate self from family, friends and physicians, whose presence or comments are only a reminder that s/he is not well—and that much more grief will follow. Don’t try to force dying people to accept more truth than they are ready to handle; a more realistic attitude will come later.

Anger

Anger is typically expressed as “Why me? I have so much to live for. Why couldn’t it have been *him*?” The anger, or related emotions of rage and resentment, may also be accompanied by envy. The anger is usually misplaced onto family, friends, and health care providers. Even though the person may be very disagreeable, people in close contact with the sick person must remember to avoid taking this anger personally. The dying person is trying to maintain a (misplaced) sense of dignity. Don’t engage with any abusive behavior. Instead, respond with firmness and kindness.

Bargaining

The inability to accept one’s impending death creates a wish or fantasy of being able to postpone the inevitable. The (often unconscious) reasoning goes: “Maybe if I am a better person, work harder, atone for my past mistakes/sins, or devote my life to unselfish service, I will be rewarded with more time, less pain, or a complete remission.” Bargaining comes from a desperate, lonely, and perhaps guilt-ridden place. This stage is usually passed through more quickly than the other stages. Its resolution may take place on a completely internal level, with little or no discussion with others.

Depression

There are two types of depression in those who are dying. The first is based on fear that remaining unfinished business (material or emotional) might burden the living—as in, “How will my family cope when I am gone?” For this, the person needs practical reassurance that life can, and will, hold beautiful moments for the survivors, and that they will cope. The second type of depression is based on the anticipation of impending losses—of no longer being with loved ones, of missing things in life that one has enjoyed. The dying need to be allowed to grieve. Give them quiet compassion and physical support without attempting to cheer them with platitudes.

Obituary: Marty Geltman, 65, Who Held His Funeral in Time to Enjoy It

Marty Geltman, an ordinary man, . . . faced death in an extraordinary way . . . [by celebrating his life, two years before his actual death] with a living funeral in June. [It was] attended by 200 family members and friends after learning his cancer was terminal. . . . On June 23, Mr. Geltman, in a wheelchair, wearing a tuxedo and tennis shoes, and his wife staged what they called a celebration of life in the . . . meeting room [of the Morristown Unitarian Fellowship]. . . .

For two mostly boisterous hours, Mr. Geltman’s life was celebrated in song, satire and clear and teary-eyed testimonial. . . . [He] explained in an interview how he confronted death so openly, and offered an assurance to others. “I wanted to teach people how to die,” he said. “I think I can handle it because I’m committed. It’s okay; it’s really okay.”

[Mr. Geltman] died at home. . . . A more conventional memorial service was held [at the time of his death] at the Menorah Chapels in Millburn, N.J.

—Steve Strunsky
The New York Times, August 18, 2001

Acceptance

In preparation for death, one withdraws energy from the environment into oneself. Physical symptoms include weakness and fatigue. The psychological counterpart is a lack of interest in one’s surroundings or even one’s pain. During this time the dying develop emotional detachment, which enables them to let go of the need or will to live. At this stage, the grieving who are left behind need even more help than the dying. The one advantage of this stage is the opportunity for the dying person to review his or her life.

Some newer models of this paradigm have added forgiveness as part of the step of acceptance. The concept of forgiveness has sometimes been misconstrued. It doesn’t mean that we condone disrespectful or violent acts that have been perpetrated against us. (This interpretation is often linked to some religions.) A truer definition of forgiveness is letting go of grudges or anger toward the person(s) who committed those unkind acts. When we don’t hold on to anger and resentment, we can replace these emotions with other, more beneficial ones. There’s a saying: “Holding onto anger and resentment is like drinking poison and expecting the other person to die.” Forgiveness is something we do for ourselves, not others.

The Need to Let Go

Despite the inevitability of death, one restorative emotion that all of these stages share is hope. Besides keeping us alive, hope brings out the best in us. Sometimes, miracles happen and a life is in fact prolonged. Other times, even though death occurs, it's a peaceful one. Parents who have lost children sometimes remark that the child's serenity about dying has helped them overcome their own fear, grief, and pain.

Some of the most positive personality changes can be catalyzed by an impending death. Counselors for the dying often say that when someone who's dying realizes how little time is left, grudges are dissolved, family and friends are forgiven, and love is restored. Counselors also emphasize how the resolution of issues determines how one dies. Someone on her deathbed who yearns to express what to her are unmentionable thoughts and feelings—but who still withholds for fear of upsetting others or appearing bad and unlikable—dies lonely and restless. Someone else who has made peace with herself, her life and the people in it, passes smoothly, is more relaxed physically, and is observably serene—sometimes even ecstatic. Each person has his or her own way of responding to death. Some people find it easier than others.

Yet for both the dying and the still-living, the one theme that seems to remain constant is that of *letting go*. This means surrendering the need to control the outcome or to know what will happen, giving up the need to dictate how other people should feel or act. Giving up the need to direct others is the key to not only dying, but also living. It helps us focus on the present, and stay in tune with our passions. It also helps us remain accountable for our own actions and avoid the practice of finger-pointing and blaming others. I will say more about this later.

The health professionals whose daily work involves life and death face letting go in another way. While

compassion for others is of course essential, they must remember not to be attached to a specific outcome.

I'll give you an example from my own life. When I first became involved with rife technology, I often lamented to myself: "Why won't she listen? I could have given her worthwhile information, but she refused to listen to other possibilities and instead, insisted on seeing that narrow-minded, know-nothing doctor." There was an important lesson for me here. *People have the right to make their own choices, regardless of whether or not we agree with those choices.* It's not up to me to decide what another's path should be. I can only present options and give the person the freedom to choose. It's *her* life. This is one of the hardest lessons for caregivers in the healing arts, or for anyone who has ever watched a loved one deteriorate and die. Yet by not respecting another's freedom to choose—even if we believe that those choices are counterproductive and unwise—we erode the relationship. We are subtly (or not so subtly) telling the person: "I don't respect your choices. I don't trust that you know what's best for you. And I don't love you enough to allow you to make your own mistakes." Letting go isn't easy!

Several years ago, I was asked as an educator to share information about rifting. But what I was really needed for was my counseling ability, to help someone let go of her wish to postpone the death of someone very close to her.

My mission of service began when I received a call from a woman in her late thirties whom I'll call Shelly. Shelly had heard me talk about Rife Therapy at a conference, and kept my phone number. Her father had cancer, and she was exploring holistic options for him other than the radiation and poisonous chemicals he was receiving. As I launched into a discussion about various electromedical devices, her continual, almost frantic demand for proof that they worked suggested to me that something was very wrong. I began to suspect that what Shelly wanted for her father was quite different from what he wanted for himself.

"How does he feel about all this strange-sounding technology?" I asked her.

"He's a little resistant to the idea," she replied cautiously, "but I want to do as much research as possible so I have something solid to present to him, something he can't refute."

Was her father open to holistic health in general? I asked her. Not really. Was he willing to change his diet? Absolutely not. Did she think he would drink enough water to flush out the toxins that would surely be unleashed by the Rife Therapy? She wasn't sure.

So I said to her, very gently, "Shelly, did you ever consider that it's his time to leave? Maybe he's trying to stay because you won't, or can't, let go of him. But maybe

It is now widely accepted that doctors who are compassionate make better healers. Deepak Chopra writes how his native East Indian background helped him transform from being a mere medical mechanic into the healer he had always wanted to be. He realized that loving the people he treats is the key to helping them, because loving others means respecting their essential humanity. "If there is any fear of disease, any rejection of the patient, or any clinging to authority," he asserts, "then conventional medicine cannot be transcended. What should be an art remains a common trade."⁴

that's not what *he* needs to do. Do you think you can let go of him if he needs to die?"

Shelly burst into tears. During the next hour, we addressed her attachment to her father and any possible remaining unresolved issues between them. After a very candid, heart-to-heart talk, and some eidetic imagery work that I facilitated, Shelly decided not to pursue rifting—or any other modality, for that matter. She did, however, decide to visit her father in the hospital and tell him that no matter what he wanted to do, she would unconditionally support him.

I didn't speak to Shelly after that phone call, but about nine months later she sent me a lovely gift with a note. "Thank you so much for helping me let go of my father," she wrote. "Right after we spoke, I went to say goodbye to him. It was his last lucid week. I told him that I would miss him terribly, but had forgiven him for wanting to leave. I'm at peace now." I was happy to hear of Shelly's positive experience with her father's death. They both got what they needed—and what they needed wasn't Rife Therapy. It was the ability to let go. Shelley's father was able to let go of his wasted body and his fear of leaving it. And Shelley was able to let go of her need to keep him alive at any cost. Paradoxically (but not surprisingly), when Shelley let go, she and her father were able to share some of the closeness that she (and undoubtedly he) had craved. They both also experienced a sense of resolution and completeness. This closure allowed her father to have one form of rest, and gave Shelley another.

Sometimes, the letting go that people experience is not a relinquishing of the body, but a release of old habits and unproductive ways of thinking. When we let go of what we don't need, healed emotions and a different way of life can enter to fill the void. I've had the privilege of witnessing such unexpected (and delightful) changes. Extraordinary, determined people, with so-called incurable illnesses such as Stage IV cancer, refuse to accept a medical pronouncement of "less than one month to live"—and miraculously begin to reverse their condition within days of starting Rife Therapy. And I cannot count how many times people have said to me, "My doctor told me that if she hadn't seen my 'before' X-rays, she would never have believed that I had cancer." There are many such cases, and I find them inspiring and moving. The biggest triumph is knowing that you can approach life on your own terms.

Death may come soon, or it may come later. We may not have conscious control over when we leave. But we can make the most of whatever time we have. Being honest about who we are can energize us in ways that we may never have imagined.

Communicate with Your Doctor

I think it important to tell your physician about anything that you have done or used to improve health. There are some good reasons for this. First, your doctor begins to understand that there are other ways to heal than what he was taught in school. Second, the doctor needs to know what you are doing so that possible interactions with any medications or treatments can be avoided. Third, as your doctor learns from you and others, he won't be making statements based on prejudices and misinformation acquired in school.

If the medical world won't build a bridge to us, we must build one to them. In doing so, everyone wins.

—James Bare, DC

Doctor Support, or Lack of It

We can always use support. It's nice to get it from our health care provider, although that isn't always possible. For those who have a life-threatening illness, however, a lack of support can feel devastating. I have heard many horror stories about medical doctors who are not supportive to those entrusted to their care.

- ◆ "My doctor was very upset that I didn't follow his regimen, even though I got better and eventually became cancer-free. Why did he get so upset? He should have just been happy that I'm still alive."
- ◆ "My doctor said I was terminally ill and had weeks to live. But then he got mad at me for refusing surgery and a blood transfusion! Why? If, according to him, I was going to die soon anyway, why should I put myself through the torture and cost of an operation—which in the end wouldn't even matter? The doctor kicked me out of his office and told me never to come back. He told all his colleagues not to see me, either. Well, it's four years later and I'm still here. The other day, I saw him walking toward me. He crossed the street so he wouldn't have to say hello. He doesn't want anything to do with me."
- ◆ "I don't understand why my doctor turned on me. Oh well, when you've been like a god for so long, it's hard when your worshippers find a new religion."
- ◆ "As a chiropractor, I've heard many stories from people with so-called terminal diseases about how their doctors were aggressive and verbally abusive because they got better and didn't die."

Sometimes practitioners publicly denounce the very treatments they secretly adopt. There's no way of knowing how often this occurs, but it does happen.

- ◆ “I know an orthodox medical doctor who doesn't follow his own advice. Once I asked his opinion of chelation therapy [the oral or intravenous administration of substances that bind with toxic metals so they can be eliminated by the body]. He told me that chelation is a fraud. But guess what? Soon after, when I started taking chelation treatments at a holistic facility, I discovered that very doctor taking chelation therapy at the facility—but in a special ‘VIP room’ with its own entryway. What a hypocrite!”

Some doctors, wedded to allopathic ideology, refuse to believe that people with cancer can heal themselves.

- ◆ “A few years ago I developed a tumor on one of my lungs. My doctor ordered regular X-rays to ‘monitor’ the tumor for growth, but other than that, there really wasn't anything he could do for me. So I bought a rifle machine and used it daily. During my last visit, I was asked to have two X-rays—of the same spot! My doctor told me, ‘You don't have a tumor on your lung.’ I said, ‘What about the previous five X-rays?’ The doc said, ‘They must have been mistakes.’ He didn't even want to know what I had done for myself!”

The more optimistic tales are variations of this:

- ◆ “When I went in for my weekly office visit, my doctor told me he couldn't believe the progress on my blood tests and X-rays, so he asked me what I was doing. I was afraid to tell him everything, so I mumbled something about herbs and vitamins. ‘Well,’ he said, smiling, ‘keep it up.’ But he didn't ask me what I was doing.”

Why *didn't* that doctor inquire what his client was doing? Why *wouldn't* those doctors want to know what was helping the people in their care? One would think that they'd seize the opportunity to help even more clients by adding more therapies to their repertoire. But alas, it usually doesn't work that way, especially if a client's journey is outside the doctor's sphere of knowledge.

Sometimes, medical professionals feel threatened—embarrassed to be unmasked for not being all-powerful and not knowing how to fix the client. Western-trained physicians who are “supposed” to know their trade frequently resent being disgraced by a non-mainstream therapy that succeeds where allopathic medicine fails. After all the time, money and effort spent on education and career development, to have a client beat the dismal odds—with *self*-treatment, no less—can feel like a huge blow to one's ego.

When I was diagnosed with fibromyalgia and Chronic Fatigue Syndrome, I was told repeatedly that it was incurable. The doctors told me, the arthritis society told me. Even the people at the fibromyalgia “support” group told me it was not curable. They told me to just accept my lot in life, that I would be like this forever and that I was in denial to think that I could cure myself when so many before me hadn't. This one comment was the single most depressing thing I had heard, worse than the diagnosis itself. To think I would have to accept that I could never be healthy and be in charge of my body again—that some invisible thing had taken over my body and my life and I was stuck like this! I cried for hours. Then I got up and went to the gym. If I was going to hurt, it was going to be because I *did* something.

That was fifteen years ago. Today I am cured. I have not had a symptom in eight years. I do not “manage” it, I do not “live with” it. I do not *have* it. If I had believed the lie of the people who were too weak or too beaten or too dependant on their illnesses, I would still have it. But I was not willing to settle for that life sentence.

The people who most often tell me I must not have really had fibromyalgia and Chronic Fatigue Syndrome are other people with fibromyalgia and Chronic Fatigue Syndrome. It shatters their little world of suffering and their “poor me” mentality to think that someone else has cured the thing they are embracing so tightly. If they don't say it outright, they give me a knowing nod with a little smile, and make some comment about how I must not have had it *that* bad then. Or I must have been misdiagnosed. Or (this one is my favorite) they have it worse than anyone, and what worked for me would not work for them. And here's another favorite, told to me recently as a reason for not coming to my house for *free* ozone sauna sessions: “I am the leader of a support group for people with fibromyalgia. I have to have it in order for them to trust me. Once they trust me, and I get the group more established, I will come for sauna sessions and *then* they will be open to that type of healing.” What's going on?

It saddens me that people are so willing to give up on their lives—and that instead of taking responsibility for fixing their problems, they believe someone else. I say, stop worrying about what anyone else says or has gone through. Do your research. And then do what you think is right for *you*. If that doesn't work, try something else and keep going until you find the result you want. Why settle for less?

—Sherri P., April 2008, email communication.

Undiagnosed for over a decade; now well, energetic, and the mother of two healthy children

Obviously this attitude has nothing to do with healing. It's about commitment to an illusory image, not service to those whom one has pledged to help. Put another way, it stems from a place of self-involvement rather than caring.

That said, I don't wish to unfairly charge all physicians with being arrogant. Their training is carefully structured to prevent them from even *thinking* of deviating from the curriculum. Medical students are not routinely taught the basics of real nutrition, let alone holistic therapies that are even more foreign to their sphere of knowledge. Moreover, they're bombarded daily by stressors: academic pressure, competition with peers, constant contact with terminally ill people and death, debt, fear of failure, and worry about lawsuits. They have no time for socializing, relaxation, or family. Most important, they suffer from chronic sleep deficit, which is built into long, grueling shifts—30 hours at a time with just one two-hour nap, generally totaling 130–150 hours of work each month. People who are sleep-deprived are susceptible to being indoctrinated. They also lose the ability to be compassionate. The med school schedule that causes sleep deficit appears to be deliberate.

Studies show that 25% of medical students suffer from depression.⁵ This is why a depleted, sleep-deprived young intern once said to me: "I'm on call 24 hours a day, exhausted, yet I'm expected to be in top form at all times. All I did in medical school was memorize what my teachers wanted me to study. How am I supposed to learn anything new when I'm simply trying to survive medical school?" By the time these students become doctors, they must focus on earning enough money to make the rent and repay their educational loans. This doesn't leave time for healing!

This is why it's easier for doctors-in-training to take the path of least resistance and uphold allegiance to the status quo. Should young doctors oppose the system that molded them, everything they have become (or believe they are) could be invalidated. They would have to substantially revamp their lives if they started criticizing a system in which they have so much invested. How many people have the fortitude to question everything upon which their livelihood—indeed, their very self-concept—depends?

The doctor in chelation therapy cited earlier may have wanted his clients' fees more than he wanted to see them healthy. It's difficult to know his motives unless we ask him. However, not all allopathically trained physicians adhere to the status quo. I know of medical doctors who passionately believe in holistic therapies yet cannot recommend them to their clients because they justifiably fear losing their licenses. Sometimes medical doctors practice time-honored natural therapies anyway—but then they get into trouble. Many successful practitioners have been censured, fined, threatened with revocation of their license, and even on occasion threatened with

On Civil Obedience

Civil disobedience is not our problem. Our problem is civil obedience. Our problem is that numbers of people all over the world have obeyed the dictates of the leaders of their government and have gone to war, and millions have been killed because of this obedience. Our problem is that people are obedient all over the world in the face of poverty and starvation and stupidity and war and cruelty. Our problem is that people are obedient while the jails are full of petty thieves, and all the while the grand thieves are running the country.

—Howard Zinn

American historian, author, professor, and activist
(1922–2010)

the loss of their lives. Some have even died in mysterious ways. Related to this, some supplement manufacturers have told me that doctors in well-known hospitals conduct tests on their products, but insist on remaining anonymous because they fear incurring the wrath of government agencies and the ridicule of their colleagues.

Every year, it seems, a prominent doctor is legally harassed (or dies under suspicious circumstances) for helping to save people's lives with holistic therapies. No matter how reputable the science is behind the therapies, no matter how many grateful clients testify in court on behalf of the practitioner (when allowed to do so), and despite the fact that not a single subject has ever been harmed—legal authorities do everything possible to prevent non-mainstream professionals from ever practicing again. Just a few practitioners who have been unjustly harassed include Stanislaus Burzynski, MD, PhD; Tedd Koren, DC; and William J. Rea, MD.

Clients who seek the services of innovative practitioners are often at risk too. Attempts are made to legally intimidate them. On more than one occasion, a child has been removed from a loving home because his or her parents (often at the child's request) sought a holistic treatment for the child's serious illness.

Legal issues aside, considering the fear of reprisal among members of the medical community, is it any wonder that people are not told about holistic modalities by their doctors?

Nevertheless, a health care provider still has the moral responsibility to uphold the truth. If he is more comfortable with what he has memorized than the questions he thinks to ask, the role of doctor becomes that of a *technician* or *mechanic* and not a *healer*. A health professional is right to become upset when she learns enough to question her training. But a true healer can change and grow. She's open-minded enough to say: "I give

myself rife sessions because they help me, even if I don't totally understand how they work." Is anyone certain how most allopathic drugs work? No—but this doesn't stop doctors from prescribing pharmaceuticals.

Health professionals have the power to break their enslavement to the government-sanctioned licensing boards that allow them to practice. People create licensing boards and people can dismantle or change them. In the last decade, five dentists and seven dental clients filed a lawsuit against California state regulators for a law that prevents dentists from disclosing the dangers of silver-mercury (amalgam) fillings to their clients. The lawsuit maintained that these regulators used their control of dental licenses to threaten and punish dentists who oppose mercury amalgam fillings.

(Whether it's even necessary to confer licenses, what the criteria should be, and who should have the power to license, is another topic.) The point is, a health care provider should be able to offer an informed opinion. If health professionals want to do their best—which includes giving their clients options—they'll have to fight intimidation and corruption. Sometimes this entails working with other practitioners. A group of physicians can often accomplish what a lone physician cannot.

People who want to be well are responsible for becoming well-informed. How many times have you heard someone exclaim, in response to a suggestion to consider Rife Therapy: "How can I convince my family?" Or, "I can't possibly use *rife equipment*! What will my doctor say? She has her own way of doing things." To hear these people speak, you'd never know it's *their* bodies and *their* lives that are at risk. If we are to achieve the good health we say we want, we must take responsibility: rely on our ability to learn and make decisions, instead of constantly yielding to the presumed expertise of infallible doctors.

It takes great courage to follow one's own path, regardless of what others might say or think. The dominant paradigm exerts enormous power and influence. And people can be resistant to change, even if those changes are positive. However, if everyone was willing to ask just a few questions, the momentum could thrust us into an entirely new way of doing medicine. Before we can create a new paradigm, though, we need to appreciate the many ways in which the mainstream paradigm manifests—so insidiously, that it often appears invisible. This understanding can help us avoid constantly making the same mistakes as we strive to build a saner world. This is the topic of the next section.

THE POLITICAL

A Few With The Most

Almost everyone I know is struggling in some way with money. Is there enough to pay the rent (or mortgage), buy quality food, clothing and other necessities—and still have enough spare time and money for leisure and relaxation? What about medical bills? If someone in your family gets sick, can they afford to stop working?

Not everyone struggles, though. A very few, very wealthy individuals enjoy virtually unrestricted access to and control of the world's resources, at the expense of those who don't have access. "Resources" constitutes land,

homes, cars and other goods, income from labor, and actual cash. I'll discuss the specifics of appropriation in a moment, but for now let's examine the numbers. According to a United Nations Human Development Program report, in 1996 there were just 358 *individuals* (all of them billionaires) who owned the same amount of wealth as almost half the population of the *entire planet* (about 6.1 billion people.)⁶ In 2000, this was the wealth distribution for adults:

In the US, 50.8 million households (43% of 119 million) don't earn enough to pay for basic expenses—housing, food, health care, transportation, and a phone.

—United Way ALICE Project, 2018
(Asset Limited, Income Constrained, Employed)

In the US, earnings of the top .001% (almost 1300 households) rose by 636%, while the average annual income of the bottom 50% remained constant at \$16,000 over four decades (adjusting for inflation).

—World Inequality Report, 2018

- ◆ The richest 10% owned 85% of the world's assets.
- ◆ The richest 2% owned 51% of the world's assets.
- ◆ The richest 1% owned 40% of the world's assets.⁷

Almost all of the richest people lived in North America, Europe, and wealthy Asia-Pacific countries. The bottom third of the poor lived in India, Africa, and low-income Asian countries. The poorer half of the world's adults didn't even own a full 1% of the world's assets.⁸

Now let's look at figures for 2013.

- ◆ The richest 10% owned 86% of the world's assets.
- ◆ The richest 2% owned a little more than 51% of the world's assets.
- ◆ The richest 1% owned 46% of the world's assets.⁹

Perhaps US presidential candidate Bernie Sanders summarized it best when he said, during a 2016 speech: "The issue of wealth and income inequality is the great moral issue of our time. . . . Truthfully, there is something profoundly wrong when the richest 80 people in the world own more wealth than the bottom half of the global

population, 3.5 billion people.”¹⁰ As astounding as those figures are, Sanders was quoting outdated statistics; newer ones are even more disparate. Oxfam, an international alliance of charitable organizations devoted to eliminating global poverty, reported that in 2015, the number of richest people had plummeted from 80 to 62. (Oxfam also reported that 1% of people own more wealth than the other 99% combined.¹¹) Even more recent statistics from 2017 indicated that the world’s *eight* wealthiest people had as much wealth as the bottom half of the world’s population. Affluence was still concentrated in the US and Europe, although China’s assets had increased fivefold since 2000.¹² Even if you review just the older figures, it’s clear that the global distribution of wealth is severely skewed.

It can be difficult to comprehend the massive amounts of wealth under discussion, so here are a few ways to understand what these sums of money can provide:

- ◆ In 2013, the investment earnings of the richest 1% of Americans—\$1.8 trillion—were more than the entire combined budgets for Social Security (\$860 billion), Medicare (\$524 billion), and Medicaid (\$304 billion).¹³
- ◆ The richest 14 people in America made enough money to hire two million pre-school teachers or emergency medical technicians.¹⁴
- ◆ In 2016, the world’s wealthiest 500 people controlled a total of \$4.4 trillion. In 2017, the wealth of these same 500 people increased to \$5.3 trillion, or (\$5,333,333,333,333.00). “For context,” one reporter wrote, “the United States of America—the world’s largest economy—has a gross domestic product of somewhere around \$19 trillion.”¹⁵

You’ll undoubtedly recognize the names of some of the wealthiest. Bill Gates, who started the Microsoft computer software company, was cited in 2014 as the richest American for the twenty-first year in a row, with a net worth of \$81 billion. He didn’t earn his money cleanly, though. Many articles have been written about Gates’s unscrupulous and predatory business practices. One practice is *planned obsolescence*, deliberately limiting the life of a product in order to force a consumer to replace it. The company makes its software unusable after a certain period by making it incompatible with newer software and/or by no longer providing customer support for it. Another ploy Microsoft uses is configuring its products in such a way that the software will work when

paired only with other Microsoft products—which the customer is then obliged to purchase. Lawsuits have been filed against the company for its failure to comply with (legal) industry standards and for implementing illegal monopolistic practices in an attempt to stifle competition.

Microsoft also has a history of mistreating its workers. To avoid paying medical benefits, the company has called many of its employees “contract” or “temporary” workers. Although Microsoft does offer more benefits to what it calls its “permanent” workers, it imposes so many mandatory overtime hours that in 1989 the company was referred to as a “Velvet Sweatshop.”¹⁶ Predictably, Microsoft is notorious for not paying all the taxes it owes.

Amazon founder and CEO Jeff Bezos is another incredibly wealthy person whose fortune is built on unjust and illegal business practices. Amazon has a global online presence with hundreds of huge warehouses in North

America, South America, Europe, Asia, and Australia. It’s a leading seller of books, music, DVDs, video games and other electronics, clothing, food, and just about anything else you can imagine (and some items that you can’t!). Over 100 million products are on its UK website alone. For a modest extra fee, Amazon’s consumers may buy unlimited two-day shipping with free returns, which is a bargain.

The problem is, Amazon is an awful place to work. The title of an article by Simon Head says it all: “Worse than Wal-Mart: Amazon’s sick brutality and secret history of ruthlessly intimidating workers,” with the subtitle “You might find your Prime membership morally indefensible after reading these stories about worker mistreatment.” The British author writes, “When I first did research on Walmart’s workplace practices in the early 2000s, I came away convinced that Walmart was the most egregiously ruthless corporation in America. However, ten years later, there is a strong challenger for this dubious distinction—Amazon Corporation.” Not surprisingly, the corporate world has a much different opinion of Amazon: it’s ranked, along with Apple, “as among the United States’ most esteemed businesses.”¹⁷

Amazon forces its employees to work under draconian labor conditions “reminiscent of the nineteenth and early twentieth centuries.” The grueling manual labor consists of unloading and shelving products from wholesalers, and then taking those products from shelves, and boxing and shipping them to customers. Required to meet a quota, which makes even toilet breaks inconvenient, employees are timed for their performance. Head writes:

[A scientific] study suggests that Apple deliberately sabotages old products . . . the number of . . . searches for “iPhone slow” spiked every time a new phone model was launched and made available to the public.

—Kalee Brown
Collective Evolution
 September 3, 2017

Amazon treats a second significant grouping of men and women with whom it has dealings—its employees—with the very opposite of [the] care and trust [it says it gives its customers]. . . . At all Amazon's centers . . . the cult of the customer . . . provides the rationale . . . to keep pushing up employee productivity while keeping hourly wages at or near poverty levels. . . . As at Walmart, Amazon achieves this with a regime of workplace pressure . . . where employees have to struggle to meet their targets and where older and less dextrous employees will begin to fail. As at Walmart, there is a pervasive 'three strikes and you're out' culture, and when these marginal employees acquire too many demerits ("points"), they are fired. . . .

[One undercover journalist hired briefly by Amazon] was able to make the pace, but he saw older workers who could not and were 'getting written up a lot' and most . . . were fired. A temporary employee at the same warehouse, in his fifties, worked ten hours a day as a picker, taking items from bins and delivering them to the shelves. He would walk thirteen to fifteen miles daily. He was told he had to pick 1,200 items in a ten-hour shift, or one item every thirty seconds. He had to get down on his hands and knees 250 to 300 times a day to do this. He got written up for not working fast enough, and when he was fired only three of the one hundred temporary workers hired with him had survived. Other examples include providing UK employees with cheap, ill-fitting boots that gave them blisters; relying on employment agencies to hire temporary workers whom Amazon can pay less, avoid paying . . . benefits [to], and fire . . . virtually at will; and [intimidating] . . . temporary workers lodged in a company dormitory near Amazon's depot at Bad Hersfeld, Germany, with guards entering their rooms without permission at all times of the day and night. These practices were exposed in a television documentary shown on the German channel ARD in February 2013. . . .

Perhaps the biggest scandal in Amazon's recent history took place at its Allentown, Pennsylvania, center during the summer of 2011. The scandal was the subject of a prizewinning series in the Allentown newspaper, the *Morning Call*, by its

reporter Spencer Soper. The series revealed the lengths Amazon was prepared to go to keep costs down and output high and yielded a singular image of Amazon's ruthlessness—ambulances stationed on hot days at the Amazon center to take employees suffering from heat stroke to the hospital. Despite the summer weather, there was no air-conditioning in the depot, and Amazon refused to let fresh air circulate by opening loading doors at either end of the depot—for fear of theft. Inside the plant there was no slackening of the pace, even as temperatures rose to more than 100 degrees.¹⁸

Investigative journalist Carole Cadwalladr confirms these conditions in "My week as an Amazon insider." Amazon's temporary workers earn minimum wage, pushed

"to the limits of the EU working time directive," and are fired "if they take three sick breaks in any three-month period." She also discusses Amazon's "tax avoidance": "Amazon's payment of minimal tax in any jurisdiction is the future of global business. A future in which multinational corporations wield more power than governments." Unfortunately, areas with "high unemployment and low economic opportunities" often feel

obliged to capitulate to this corporation. As a condition for Amazon placing a distribution center in Wales, the Welsh government gave Amazon £8.8 million in grants.¹⁹ The company has similar arrangements worldwide.

Some of Amazon's employees live in homeless shelters or in their cars. In December 2016, seasonal workers were living outside in the bitter cold because they couldn't afford to travel to work. European newspapers featured headlines such as: "Hard-pressed Amazon workers in Scotland sleeping in tents near warehouse to save money"²⁰ and "Where the Amazombies sleep: Tented woods near Amazon's massive distribution centre is 'lived in by Christmas worker elves' who are barely paid the minimum wage to work blistering 12-hour shifts with timed toilet breaks."²¹ Despite the 60-hour workweeks that these employees were forced to accept, they had no benefits.

Why would workers tolerate such conditions? Cadwalladr wondered. "'I've worked everywhere,' a forklift truck driver tells me. 'And this is the worst. They pay shit because they can. Because there's no other jobs out there. Trust me, I know, I tried. I was working for £12 an hour in my last job. I'm getting £8 an hour here. I worked for Sony before and they were strict but fair. It's the unfairness that gets you here.'"²²

The combined \$248.5 billion wealth of just three people—Bill Gates, Jeff Bezos and financier Warren Buffett—is greater than that of the poorest 160 million Americans.

—statistics from "Billionaire Bonanza 2017,"
Institute for Policy Studies
ips-dc.org/
report-billionaire-bonanza-2017

Even many of the merchants who sell through Amazon aren't happy. In lawsuits against the corporation, they have charged it with (among other acts) sabotage, intentional interference with contracts, false advertising, and anti-competitive business practices. In 2011, M-Edge, a manufacturer of eBook accessories including jackets for Amazon's Kindle eBook reader, filed a lawsuit against Amazon for attempts to "hijack the product through threats, deceit, interference with M-Edge's customer relationships, and patent infringement."²³ Amazon has a history of revising its contracts with selected desirable vendors so that the new terms give it a higher percentage of sales fees than what had been originally negotiated. After M-Edge refused to accept Amazon's latest demands of a much higher commission—35% instead of the originally agreed 15%—the corporate giant began manufacturing its own lighted e-reader jacket, which looked suspiciously like M-Edge's patented design. Amazon further retaliated by "de-listing" M-Edge, making that company's product less visible on its website. "This case presents a classic example of unlawful corporate bullying," M-Edge's lawsuit stated.²⁴

One more thing. Amazon's corporate income taxes are well below the official rate. For example, in 2011, Amazon paid a lower tax rate than a US household making \$42,500 a year.²⁵ In 2017, after earning \$5.6 billion in income, Amazon took advantage of corporate loopholes in the US tax laws and paid no federal income taxes at all.²⁶

Whether a multinational corporation develops its own products or sells the products of others, the business strategies are similar. This could easily apply to Whole Foods (which merged with Amazon in August 2017) or hundreds of other companies. They're all willing to exploit their workers, even though it's the hired help who provide the owners / founders / CEOs with enormous wealth. Some well-known companies that pay few or no taxes, or receive US government subsidies, include Citigroup, ExxonMobil, FedEx, General Electric, Ikea, Pepsi, and the drug companies Merck and Pfizer.²⁷

The richest of the rich, which comprise barely 0.01% of the world's population, are commonly known as the *power elite* or *ruling elite*. Social scientist and attorney Riane Eisler has given a name to the elitist policy: the *dominator paradigm* (or *dominant paradigm*). The dominator paradigm doesn't regard their legal or monetary privileges as criminal. On the contrary, their privileges (which restrict us) are promoted as normal because they're so commonplace. We perceive these activities in one of three ways: 1) as ethical and right, in which case there's nothing that needs to be done about them; 2) as unfair, but "That's simply the way things are, and we're powerless to change them"; or 3) as unfair—so unfair, that "We're not taking it anymore, and it's time to do something about it."

Chances are, if you're reading this book, you're dissatisfied with the medical mindset of the dominator paradigm. Holistic health seekers do more than investigate, challenge their doctors, and think of other possibilities. They're more likely to reject attempts by others to regulate and intrude in their lives. Independent thinkers value the freedom to make their own mistakes and learn from them. They don't want someone else to make choices for them, especially if those "choices" interfere with their quality of life or cause harm.

People who understand the scope and implications of holistic living may tend to apply its principles to all areas of life—physical, emotional, mental, and spiritual. They say to themselves, "We're not taking it anymore, and it's time to do something about it."

They Thought They Were Free

What no one seemed to notice was the ever widening gap between the government and the people. . . . [The government that] did not want us to think anyway gave us some dreadful, fundamental things to think about . . . and kept us so busy with continuous changes and "crises," and so fascinated . . . by the machinations of the "national enemies," without and within, that we had no time to think about these dreadful things that were growing, little by little, all around us.

Each step was so small, so inconsequential, so well explained or, on occasion, "regretted," that unless one understood . . . what all these "little measures" . . . must some day lead to, one no more saw it developing from day to day than a farmer in his field sees the corn growing. . . . Each act is worse than the last, but only a little worse. . . . You wait for one great shocking occasion, thinking that others, when such a shock comes, will join you in resisting somehow. You don't want to act, or even talk, alone . . . you don't want to "go out of your way to make trouble." But the one great shocking occasion, when tens or hundreds or thousands will join with you, never comes.

That's the difficulty. The forms are all there, all untouched, all reassuring, the houses, the shops, the jobs, the mealtimes, the visits, the concerts, the cinema, the holidays. But the spirit, which you never noticed because you made the lifelong mistake of identifying it with the forms, is changed. Now you live in a world of hate and fear, and the people who hate and fear do not even know it themselves, when everyone is transformed. . . . You have accepted things you would not have accepted five years ago, a year ago, things your [parents] . . . could never have imagined.

—Milton Mayer
*They Thought They Were Free:
 The Germans, 1938–45* (1955)

When Corporations Govern

Establishing Power

When I ask people what the word “government” means, they intuitively understand that the all-encompassing, pervasive activities of “government” are entrenched in virtually all aspects of life: ownership of property, how one earns a living, the ease (or not) of travel, even standards for psychology and religion. However (at least as I was taught in grammar school), a government is supposed to serve its people and not vice-versa. When the United States of America was born, there were far fewer restrictions on ordinary citizens than there are today. Corporations also had far less power. Yet the US legal system has been carefully (and surreptitiously) crafted to gradually allow certain institutions, organizations and specialty groups (including banks) to impinge on the rights of the majority.

How did this happen? David Morris, in “Corporate Might vs. Citizens’ Rights,” explains:

In the nineteenth century, the vehicle for curbing the amoral power of corporations was the state charter. In return for awarding the corporation the privilege of limited liability, states inserted in their corporate charters certain safeguards. These limited the number of business endeavors in which a given corporation could engage. Restrictions on size were common. As late as 1903, almost half of the states limited the duration of corporate charters to between 20 and 50 years. If corporations did not live up to their responsibilities, legislatures revoked their charters.

But . . . a combination of judicial and legislative mischief eliminated virtually any curbs on corporate power. . . . Without discussion or debate, the Supreme Court . . . [gave corporations] the same constitutional protections as natural persons. At the state level, charters were changed to allow corporations not only limited liability, but unlimited life and size and reach.

The Supreme Court decision gives corporations similar rights to natural persons, but *in practice this doesn’t mean giving them similar responsibilities*. A natural person who breaks the law often goes to jail. . . . *But corporations cannot go to jail, and very,*

very rarely do those directing the corporation spend even a day in lockup. And in the 20th century, no corporation was ever given capital punishment, no matter how many people died as a result of its actions. [emphasis added]²⁸

As a result of this strategy, the power elite owns and operates the corporations and banks that are now the true (and hidden) global rulers. A new dictionary word has even appeared: *corporatocracy*, which means “an economic and political system controlled by corporations.”²⁹

Under corporatocracy, transnational and multinational corporations accrue power and make money by displacing the laws of the countries they’re occupying. To hijack the laws of sovereign nations, members of the power elite meet secretly. They draft a classified document called an

“agreement” (although the public isn’t allowed to see it, and wouldn’t support this “agreement” if they did see it). The document permits corporations to sue governments if those governments pass laws that *might* infringe on corporate profits. Thus, in the name of protecting or maximizing profits, corporations like AT&T, Walmart and Monsanto (now Bayer) have power over how we use the Internet, the safety of the food we eat, and how much we can earn. Material once freely shared and critiqued on the Internet is now unavailable (censored). Small

family farms have difficulty surviving, while multinational corporations establish industrial agriculture and factory farms that plant GMOs and spray pesticides, damaging our soil, air, and water. (This “agreement” is always promoted as “pro-agriculture.”) More and more shoddy, unsafe products continue to be imported into North America (where profit allowances are strong). Also in the name of profit, corporations can yank jobs out of the US and hire workers offshore for a lot cheaper. Under this practice of *outsourcing*, North Americans can’t possibly compete with Vietnamese making less than 65 cents per hour.

Health care falls under corporate rule as well. In the name of profit, drug companies can fight regulations that protect consumers and give them more choices. This means that drug patents can be extended. It means that drug companies are immune to lawsuits when members of the public are killed or maimed due to inadequately tested (or untested) drugs. It also means that natural, effective, non-invasive cancer cures—such as apricot pits (which contain Vitamin B-17) and cansema (Black Salve,

An analysis of the relationships between 43,000 transnational corporations has identified a relatively small group of [147 interconnected] companies, mainly banks, with disproportionate power over the global economy. . . . the study, by a trio of complex systems theorists at the Swiss Federal Institute of Technology in Zurich, is the first to go beyond ideology to empirically identify such a network of power.

—Andy Coghlan and Debora MacKenzie
“Revealed, the capitalist network
that runs the world”
New Scientist Live, October 19, 2011

made with bloodroot and other herbs)—cannot legally be advertised or sold for medical purposes. This profit agenda may also extend to the care you receive from your personal doctor or specialist, who is forbidden to offer, or even talk about, any form of holistic treatment that would compete with pharmaceutical industry profits.

Big Pharma's reach is extensive. Microsoft founder Bill Gates owns millions in Monsanto and drug company stocks. The nonprofit Bill and Melinda Gates Foundation dispenses vaccines, usually in less technologically advanced countries where people have brown and black skin, not white. The Gates foundation invests—tax free—in the very drug companies in which Bill Gates owns millions of dollars worth of stocks. Disease and death have skyrocketed in those parts of the world “gifted” with Gates's vaccines. In 2015 in India, where many children died from Gates's vaccines, neither the children nor parents had given informed consent for the inoculations.

Global Bullying and Political Consent

The elite manipulate and control the politicians who have agreed to create and enforce repressive laws. The politicians always benefit in some way, whether they're directly or indirectly financially tied to the corporations. The wealthiest industrialized corporate nations of the world are able to implement their rules without the smaller, less industrialized nations having much or any veto power, for two reasons. One, these smaller countries don't have much money. In fact, most of them are far poorer than even modestly wealthy corporations. Unless these nations comply with the demands of the larger multinational corporations, any money flowing into them from foreign investments and industry will be withdrawn. Two, these smaller countries typically don't have much military strength. They acquiesce to the mightier powers like the schoolchild who's obliged to surrender to the biggest bully on the block. There's always the very real threat of a military coup, during which a democratically elected leader of a country can be killed and replaced by someone whom the corporations and their allies like better and who follows their rules.

This dictator agenda is spreading like an unchecked cancer, worldwide. Laws are obliterating people's right to govern themselves while granting corporations virtually unlimited power to exploit the resources and labor of the people who live in those countries. There have been several laws already implemented or attempted during the last several decades. It's important to know what they are so we can recognize and prevent similar efforts in the future. On January 1, 1994, the North American Free Trade Agreement (NAFTA) was signed by Canada, Mexico, and the United States (and is currently being

Your Cheapest Items: Made in Sweat Shops

Unscrupulous business practices abound. Even accounting for the differences in currency between the country buying the products (the US) and the countries producing them (India, China), overseas workers are paid far less than a living wage. For example, as reported in the article “Sweatshop Mythbusters,” the Megatex factory in Port-au-Prince, Haiti (which makes several lines of clothing for Disney) paid its workers \$2.15 per day. The average daily expenses of the workers were \$6.12.³⁰ In many countries, laborers are given few or no breaks (or bathroom time), and no lunch hour. They are forced to work six- or seven-day weeks. Children as young as eight years old work in factories. Often, workers are locked up at night in company compounds to prevent them from escaping.

considered for renewal). Under the auspices of several international organizations—including the World Bank, the International Monetary Fund (IMF) and the World Trade Organization (WTO)—the dominators overruled laws of individual countries. ISDS, an acronym for Investor State Dispute Settlement, is part of a provision within NAFTA, giving corporations even more power when countries pass laws that the corporations don't like. Under the ISDS, if a corporation convinces a panel of *only three corporate attorneys* that a country's law violates its special rights under NAFTA, the law is overturned and the corporation is granted millions or billions of (taxpayer) dollars as compensation for the “transgression.” There's also the TPP (Trans-Pacific Partnership). As might be expected, this “free trade partnership” is actually a secret deal of corporate expansion. Like NAFTA before it, the TPP allows corporations to do whatever they want at the expense of ordinary people. The TPP has been signed by the United States and at least eleven other countries. As of this writing, there is an organized resistance across North America to prevent the TPP from becoming law.

No matter what they're called, these and similar “contracts,” “agreements,” or “treaties” are grabs for power.

Legal Thefts

Virtually every country on Earth has laws against theft. Yet today, corporations are permitted to legally steal—thefts that, if committed by individual persons, would likely land those persons in jail. Here's a brief summary of the different ways in which corporations steal. Again, I'm discussing this in some depth because once we understand the dynamics of what has systematically been taking place, we will be in a better position to change the outcome. Our health and our lives are at stake.

The Politics of Food

Food becomes us. We are what we eat. . . . Eating is the ultimate ethical act. It is the ultimate political act. It is the act where we decide whether we're going to be part of raping the planet, killing the farmers, killing diverse species, and destroying our health in the process, too; or we will be part of the protection of species, the protection of the atmosphere, the protection of the . . . givers of food. . . . The idea that you have to introduce more chemicals and you have to introduce miracle seeds to increase productivity and to make rural incomes grow is not just not true, it is a blatant lie. . . . Our ignoring this lie is what is leading to the genocide of farmers.

Genetic engineering revolution is being driven by global corporations. . . . With changes in US law, there has been this assumption that you can now treat life as an invention. Seeds, therefore, can be treated as the patented property of corporations. And if they are the patented property of corporations, you basically treat the farmer as someone who has borrowed your technology and has to pay a license fee and royalty for it, when all that the farmer has done is continued to do what is their duty, which is to grow seed out from the last crop.

The farmers are getting squeezed. . . . [So far] 140,000 farmers have committed suicide. Ninety percent of them committed suicide by drinking the same poisons that had got them into debt—pesticides. . . . We are talking about a genocide that has no stoppage unless we change our food paradigm.

physicist, social change activist
and director, The Research Foundation for Science,
Technology, and Ecology in New Delhi, India.

Excerpted from "The Politics of Food:
Protesting the Anti-Green Revolution,"
speech given at Emory University in Atlanta, Georgia, US
October 17, 2006

- ◆ Food, a need that throughout human history has been considered a basic right, is now being treated as a consumer item that corporations call "intellectual property." For example, Monsanto takes crop seeds, alters them in its genetics laboratories, and then receives patents on these seeds. When genetically engineered seeds appear on the lands of farmers—even if these farmers did not voluntarily plant the seeds and don't want them—Monsanto sues for breach of patent. As of this writing, there are over 40 such cases worldwide. (See Insert, "Persecuting Organic Farmers.") Related to this, countries who do not want to accept imported GE foods can be fined or sued for impeding commerce under globalization policies.

- ◆ People of poor nations are starving because their land—which is managed by foreign investors instead of the people who live on the land—is being used to grow coffee, cacao, and sugar cane. Few cocoa bean pickers have tasted chocolate because they can't afford it. If these lands were used to plant food crops that the people could actually eat, they wouldn't be starving.
- ◆ Water, another human necessity, is also being treated worldwide as a consumer, for-profit item. In many parts of the United States, Nestlé has been receiving, from politician cronies in secret negotiations, tax breaks and grants to build new bottling facilities. The company pays almost nothing for spring and municipal waters, which it then bottles and ships all over the country to sell at a profit. In Flint, Michigan, residents pay an average of \$140 a month for water—which is undrinkable because it's contaminated with lead. One hundred fifty miles away, Nestlé pays just \$200 a year for the water it bottles and sells. Drew Philp, who lives in Detroit, Michigan, reports that "Nestlé siphons off 150 gallons of water per *minute* from the Great Lakes aquifers to serve their bottled water operation. Aside from a small permitting fee, they pay the residents of Michigan exactly zero dollars for the privilege to remove our natural resources held in common. In fact, the state gave them \$13 million in tax breaks to locate the plant here. Conveniently, Nestlé's Michigan spokeswoman, [the ironically named] Deborah Muchmore, is married to the governor's chief of staff, Dennis Muchmore. Could you imagine BP [British Petroleum] pumping the oil from beneath Saudi Arabia while paying nothing to the owners? Nestlé is now petitioning the state to increase their allowance to 400 gallons a minute, still, of course, for free."³¹

Nestlé is even stealing water from areas in California that are undergoing severe drought and may run out of water. Debra Anderson, president of the McCloud Watershed Council in California, describes "the division they caused in our town . . . [because they received the rights to] an unlimited amount of ground water. It was an unheard of 100-year contract . . . [allowing Nestlé to pay] less than a tenth of a cent a gallon. This project would add over 600 truck trips a day, 24 hours a day, seven days a week, to our beautiful two-lane scenic volcanic highway. . . . They would destroy our historical mill site by tearing down all of the remaining historical buildings . . . Nestlé had truly treated our community as though we were a third world country and this all came on the guise of boosting our economy by creating jobs, which in reality were too few jobs for too little pay."³²

Persecuting Organic Farmers

Before it was bought by Bayer, the mega-corporation Monsanto—dubbed “Monsatan” by clean food activists worldwide—increased the intensity of its bullying tactics against non-GMO farmers. The story of veteran Canadian farmer Percy Schmeiser is just one example of many illustrating how Monsanto has used its power and wealth to try to dismantle the clean food movement and usurp people’s right to grow crops of their choice.

Schmeiser comes from three generations of organic farmers who save their own seeds and replant the following season. In 1998, detectives working for Monsanto trespassed onto Schmeiser’s land, took some canola (rapeseed) plants without his permission, and then reported to Monsanto that its genetically modified, herbicide-tolerant Roundup-Ready® canola had spread across almost 1,000 acres of Schmeiser’s canola fields. After the 70-year-old farmer was informed by Monsanto that his crops contained their exclusive patented seed technology, he was sued for violating their patent—because of plants that the farmer neither wanted nor planted! It was first assumed that Schmeiser’s crops had become contaminated when genetically engineered canola pollen from neighboring farms blew onto his land, but it’s now believed that a farmer who worked for Monsanto secretly grew Roundup-Ready® canola on Mr. Schmeiser’s land.

Setting aside the wisdom of growing even non-GM canola (see Chapter 3, page 310), Monsanto’s tactics were deceitful and brazen. Fortunately, Percy Schmeiser’s eloquence and experience in local politics, his anger at being deceived, and the financial support sent to him from people all over the world, gave him the fortitude to fight. In a countersuit, he charged Monsanto with libel (because it had publicly accused him of committing illegal acts), callous disregard of the environment, and the contamination of his non-GM canola seed that had taken him over 40 years to develop.

The Canadian federal judges who first heard the case supported Monsanto’s patent infringement claim. They said it didn’t matter *how* the seed had migrated onto Schmeiser’s land, whether the farmer *wanted* the GM crops, or even whether he *intended* to benefit from them: theoretically, Schmeiser *could* have used the seeds. In subsequent trials, the court conceded that the GMOs in Schmeiser’s crops had not provided any advantage, and that Schmeiser had not earned any profits attributable to the genetically modified seeds. Nevertheless, the Canadian Supreme Court stated that Schmeiser’s planting and cultivation of GM canola constituted “use” of Monsanto’s patented invention. And because the “use” of a patented invention without compensation was still considered the more serious

infraction, the Canadian Federal Court upheld the validity of Monsanto’s patent. It dismissed Schmeiser’s challenge to the patent (in which he stated, correctly, that Monsanto cannot control the spread of GM seed). Moreover, the judge decreed that while a farmer can claim ownership of crops growing in his fields when they’re inadvertently carried there by pollen or wind, this does not pertain to patented GM seed.

At least Percy and his wife Louise enjoyed a partial victory. According to a 2008 out-of-court settlement, Schmeiser was not obligated to give Monsanto any profits from his crops, did not have to pay damages, and did not have to reimburse the company for its legal bills. Furthermore, Monsanto had to agree to pay all the cleanup costs of the Roundup-Ready® canola that had contaminated the Schmeiser fields. Fortunately, Mr. Schmeiser was allowed to discuss the case and would be permitted to sue Monsanto again if further contamination occurred.

Since 2000, Schmeiser has been a featured speaker at conferences on genetic engineering and seeds in India, Pakistan, Bangladesh, New Zealand, the United States, and other countries. In October 2000 in India, he received the Mahatma Gandhi Award in recognition of his non-violent work for the betterment of humankind. In December 2007, Percy and Louise were the recipients of the Right Livelihood Award from a Swedish charitable foundation.

Despite the Schmeiser victory, which may have provided a legal precedent for other farmers, Monsanto has still been abusing its power. Unwanted GM seeds that accidentally migrate onto a farmer’s land may still be construed as a “use” of the company’s patented inventions. Since 1997, the corporation has filed an average of nine similar lawsuits a year, worldwide. In a recent audacious display, Monsanto sued the state of California for listing its pesticide glyphosate (Roundup®) as a carcinogen—even though the World Health Organization agrees with this classification, and (as has been proven in court) Monsanto’s own studies from four decades ago showed that the herbicide in fact does cause tumors. The company has suppressed this data and lied about it. Because California’s Safe Drinking Water and Toxic Enforcement Act forbids listed chemicals from being dumped into the state’s drinking water, Monsanto doesn’t want glyphosate to be listed: then the company would be held accountable for its toxic herbicide seeping into the public’s water supply.

Monsanto subsidiaries, now the largest seed supply companies in the world, seek to own, control, and manipulate humankind’s food supply—whether you’re a farmer or an individual who plants a garden.

We must fight the battle that is before us: human beings versus monstrous corporations and their body-snatched government puppets. . . .

There are two kinds of politics in the world: the politics of love and the politics of fear. Love is about cooperation, sharing and inclusion. It is about the elevation of each individual to a life neither suppressed nor exploited, but instead nourished to rise to its full potential—a life for its own sake and so that we may all benefit by the gift of that life. Fear and the politics of fear is about narrow ideologies that separate us, militarize us, imprison us, exploit us, control us, overcharge us, demean us, bury us alive in debt and anxiety and then bury us dead in cancers and wars. The politics of love and the politics of fear are now pitted against each other in a naked struggle that will define not only the 21st century but centuries to come. We are the Sons and Daughters of Liberty in that struggle, indeed we are. Let us not shirk from the mission that fate has bestowed upon us, for it has done so as a blessing.

—Doris “Granny D” Haddock
(1910–2101)

She walked across the United States in 1998 to protest the corporate takeover of the world. The above is excerpted from an August 16, 2003 speech given in Hood River, Oregon, US.

In poor countries, corporations are setting up expensive equipment to redirect, repackage and distribute water, after which they charge the peasants for using what was once simply collected or bought for a very nominal fee. During the last two decades this happened in Bolivia, one of the poorest countries in South America. In exchange for a multi-million dollar loan, Bolivia’s corrupt government allowed a private company to take charge of water “services.” However, this private water company charged the Bolivian people 35% to 300% more than what they had been paying, so water cost more than food. For some people, water bills comprised half their monthly earnings. When a movement of farmers, workers, peasants and others responded with a general strike, the government—after declaring martial law and killing civilians—revoked its water privatization legislation. However, the water privatization company then sued the Bolivian government for \$40 million due to “breach of contract,” claiming that investors’ rights take precedence over the rights of the people who live in that country.

In Canada, the province of British Columbia has a law forbidding exports of its water. A California-based company called Sun Belt, claiming that this lack of access would force it to lose a \$10 million profit, sued

the government of Canada, citing a violation of its NAFTA-based investor rights. The status of the case is unclear, as NAFTA proceedings are open to neither the public nor journalists.

- ◆ Similar to the situation with water, laws established by nations to protect the environment can be overturned by corporations, on the premise that these environmental laws are an impediment to free trade.
- ◆ Also similar to the situation with water, laws created by nations to protect the labor force (to ensure realistic wages and fair treatment of the workers) can be challenged by corporations, on the premise that these laws are an impediment to free trade.
- ◆ Corporations, not individual nations, decide when and where to erect offices, factories, pipelines, and dams. They also decide the circumstances under which they conduct business. If the government of a country wants to exercise its right as a *sovereign nation*—that is, determine its own destiny—the corporation, backed by international law, can sue the country for preventing (the unlimited expansion of) commerce.
- ◆ Under international “globalization” laws, any country’s effort to protect its people, food, and natural resources is considered an “impediment to free trade” and is therefore a crime. “No one should be above the law,” writes David Morris. “Yet one entity is granted a *de facto* exemption from [this principle] . . . the corporation. It is an odd exception. After all, corporations can wield power and wreak damage a million times greater than can an individual.”³³

Depraved acts are occurring daily all over the world. Whether you identify as a capitalist, conservative, liberal or socialist, or consider yourself the most apolitical person around: unless you belong to the power elite, access to your choice of nutritional supplements and other related products is being restricted. Access to the health care you want and deserve is also being threatened until it’s permanently legislated out of existence. Furthermore, people are being forced to submit to medical interventions that they *don’t* want, such as mandatory vaccinations, establishment medicine cancer protocols, and forced sterilizations. The “alternative” press increasingly reports that people are being prosecuted as criminals for choosing non-mainstream therapies. Children who receive holistic treatments (even if it’s their own choice) are being removed from their homes and put into foster care. Health care providers are being prosecuted as criminals for offering the therapies. Often they are fined and their licenses are revoked. In many cases, they are even being sent to prison.

Dominator Paradigm Propaganda

Public Relations Strategies

In 2001, a groundbreaking book was published called *Trust Us, We're Experts: How Industry Manipulates Science and Gambles With Your Future*. The authors explained that much of what people believe is factual (or “common knowledge”) is actually bias.

When you hire a contractor or an attorney, they work for you because you are the one who pays for their services. The PR [public relations] experts who work behind the scenes and the visible experts who appear on the public stage to “educate” you about various issues are not working for you. They answer to a client whose interests and values may even run contrary to your own. Experts don’t appear out of nowhere. They work for someone, and if they are trying to influence the outcome of issues that affect you, then you deserve to know who is paying their bills.³⁴

Chiropractor Tim O’Shea discusses some of the ploys used by public relations (“PR”) firms to create acceptance by the public.

When PR firms attack legitimate environmental groups and alternative medicine people, they . . . use special words which will carry an emotional punch: “outraged,” “sound science,” “junk science,” “sensible,” “scaremongering,” “responsible,” “phobia,” “hoax,” “alarmist,” “hysteria.” . . . As the science of mass control evolved, PR firms developed further guidelines for effective copy. Here are some of the gems:

- ◆ Dehumanize the attacked party by labeling and name calling.
- ◆ Speak in glittering generalities using emotionally positive words.
- ◆ When covering something up, don’t use plain English; stall for time; distract.
- ◆ Get endorsements from celebrities, churches, sports figures, street people—anyone who has no expertise in the subject at hand.
- ◆ [Use] the “plain folks” ruse: us billionaires are just like you.
- ◆ When minimizing outrage, don’t say anything memorable . . . point out the benefits of what just happened . . . [and] avoid moral issues.³⁵

“Front” groups, common in industrial circles, are organizations whose names disguise the real purpose

Who’s Doing the Financing?

The Coca-Cola Company, which makes soda pop, has a history of “sponsoring” (giving money to) the following governmental organizations, foundations, and medical schools. This is only a small sample of recipients. Also, be aware that Pepsi and other companies make similar contributions.

- ◆ **Governmental Agencies:** Centers for Disease Control; Health and Human Services; National Heart, Lung, and Blood Institute; National Institute of Child Health and Human Development; National Institutes of Health.
- ◆ **Medical Schools:** Emory University, Harvard Medical School, Medical University of South Carolina, University of Georgia Department of Foods and Nutrition, University of Washington Center for Public Health Nutrition.
- ◆ **Public Health Organizations and Foundations:** Academy of Nutrition and Dietetics, American Academy of Pediatrics, American Diabetes Association, American Cancer Society, American College of Cardiology, American College of Sports Medicine, American Heart Association, American Lung Association, American Medical Association, American Red Cross, Center for Food Integrity, International Life Sciences Institute North America, National Dental Association, National Black Nurses Association, National Hispanic Medical Association, and (incredibly!) The Obesity Society.

—data from Daniel G. Aaron and Michael B. Siegel,
“Sponsorship of National Health Organizations
by Two Major Soda Companies,”

American Journal of Preventive Medicine, January 2017

of the groups. In fact, common-use terms have been incorporated into the names of organizations that are doing the very *opposite* of what the terms mean. This practice of *reversals* is a standard strategy of the dominator class, as depicted in the chart on the following page. Other names whose commonsense meanings belie the true purposes of the groups are Advancement of Sound Science Coalition, Air Hygiene Foundation, Alliance for Better Foods, American Council on Science and Health, Center for Produce Quality, Consumer Alert, Industrial Health Federation, International Food Information Council, and Manhattan Institute.

One more thing. It’s always useful to know who is financing an organization—whether the organization is part of government, a nonprofit, a charity, or an institution such as a university. See Sidebar, “Who’s Doing the Financing?,” which provides a brief but representative overview.

Name of Group	Common Sense Meaning	Who's Really Behind the Group
Citizens for Fire Safety	Tips on how to prevent fires in the workplace and at home, such as not smoking in bed and not leaving candles or open flame unattended.	Flame Retardant Manufacturers, including North American Flame Retardant Alliance. <i>Note: Flame retardants consist of highly toxic chemicals used in products made of plastics, textiles, foam and wood, that lessen the chance of fires starting or spreading.</i>
Non-Smoker Protection Committee	Designed to protect the rights and health of non-smokers from the effects of secondhand smoke.	Front group for the tobacco industry, funded by R.J. Reynolds Tobacco Company. R.J. Reynolds had backed a November 2006 ballot initiative called the "Arizona Non-Smoker Protection Act"—which would have allowed smoking in all bars and some restaurants statewide. This would have also overturned smoking bans and prohibited cities from adopting strict smoking bans in the future.
Citizens for Health (CFH) & Natural Solutions Foundation (NSF)	Extremely vague, this could mean anything. Natural health aficionados might assume it's an organization dedicated to healthy lifestyle choices, but "health" could also be construed to mean managing disease by taking pharmaceuticals.	CFH's related website, FoodIdentityTheft.com, "alerts consumers about misleading food and beverage packaging and deceptive advertising." ³⁶ It warns about high fructose corn syrup and the artificial sweetener Splenda®, but it does receive money from the sugar industry. ³⁷ According to the International Advocates for Health Freedom, CFH and the NSF are "controlled opposition groups on the Codex issue. We believe the true purpose of these groups is to assist the pharma dominated vitamin trade associations by recommending grass roots actions which appear plausible on the surface to the poorly informed, but which upon close inspection fail to hold up to careful scrutiny." ³⁸ The IAHF warns that even though the NSF circulates petitions supporting protection of vitamin supplementation, these are routinely ignored by US Codex delegates and regular citizens have no actual power to generate changes.
Citizens for the Environment Tax status unknown; there's no listing for this group in a database of nonprofit organizations.	Sounds like a "green" organization. This could only mean clean air, clean water, clean land, and using resources in a sustainable manner.	Front group created in 1990 by Citizens for a Sound Economy. Both groups were funded by the Koch family, which made billions in the oil industry. CFE says that acid rain, natural resource depletion, and shrinking landfill space are "myths." CFE has lobbied against the Clean Air Act and tried to remove the few restrictions still existing against corporations so they can continue to pollute.
Citizens for Affordable Energy Group's purpose, says its website, is "To educate citizens and government officials about pragmatic, non-partisan affordable energy solutions, environmental protection, energy alternatives, efficiency, infrastructure, public policy, competitiveness, social cohesion, and quality of life." ³²	One might be inclined to believe that "affordable" could mean solar or wind power, even though the text from the organization's website (see left) is vague and doesn't give you the organizations true position on any issue.	Front group. The leading member is John Hofmeister, formerly Group Human Resource Director of the Shell Group (of Shell Oil Company; he retired in 2008). Currently, Hofmeister is Director at Lufkin Industries, Inc. and the Senior Independent Director of Hunting PLC, both of which manufacture products for oil and gas extraction. Hofmeister is also listed as a director at CAMAC Energy Inc., a US-based oil and gas corporation that is operating in Nigeria (among other places).

When Public Relations Becomes Law

Twisting the meanings of words, also known as *propaganda*, is a common practice. Propaganda inhibits unrest by instilling mental confusion. Being in a state of continual confusion and uncertainty helps keep people anesthetized and complacent. The mass media reinforces this state by airing slanted “news” reports, which try to convince people that a situation is better than what their own senses and experiences keep telling them.

Major media routinely promotes dominator tactics. It makes corporate interests sound beneficial and even desirable by using euphemisms such as *globalization* and *free trade*. Despite these deceptions, the public is discovering the truth: Corporations and their political and financial allies are the sole beneficiaries of this “globalization” that negates a nation’s own laws. Moreover, “free” enterprise is not free to citizens, but provides corporations with tax breaks and other perks.

In the West, the meaning of power has been twisted into its opposite. True power is mastery of self. However, it’s usually defined not as *self-empowerment*, but as *dominance over others*. Riane Eisler stated during an interview:

Children learn early on that it’s very dangerous to challenge authority no matter how brutal or unjust. . . . [To] move to what I call a partnership system, . . . we have to think outside the conventional categories of ancient versus modern, or religious versus secular, or right versus left, or industrial versus pre or post industrial. . . . [We must create] relations that are not based on these top down rankings that are ultimately backed up by force, but . . . relations of mutual respect, mutual benefit, [and] mutual accountability.³⁹

Through their attitudes, behavior and laws, dominant paradigm people exhibit disdain for the dignity, safety, and humanity of others. Understandably, dominators suppress challenges to their way of life. One might think that people would question or challenge the power elite if their air, water, and food were contaminated; if affordable, effective health care of their choice was restricted; if they had limited access to resources, including factual information; and if they had to struggle every day for basic necessities. However, dominator societies are carefully structured to ensure that the average citizen doesn’t object (too much) and accepts what s/he is told. Dominators also reinforce the concept that we don’t have control over our own lives, that we *shouldn’t* have control over our own lives, and that if we *do* have control, we should relinquish it. This indoctrination is repeatedly ingrained so that people become emotionally more vulnerable to so-called authorities—who do, in fact, take over their lives. These

Tobacco Industry Schemes

In today’s depersonalized, mechanized world, people are becoming alienated from their own bodies, mistrusting of their experiences, and strangers to common sense. For example, everyone now knows that smoking is harmful. But it took decades for common sense—despite the often immediate ill effects of inhaling smoke into one’s lungs—to overcome the tobacco industry’s public relations propaganda (lies) that smoking is a fine and even healthy practice. It’s worth reviewing some of the tobacco industry’s tactics because these same ploys are being used today by multinational corporations to convince the public that what they’re doing isn’t dangerous or unethical.

- ◆ Question the science.
- ◆ Manufacture doubt.
- ◆ Create controversy.
- ◆ Delay regulations.
- ◆ Shift the blame.
- ◆ Pontificate on the public’s right to choose.
- ◆ Secure third party allies.
- ◆ Find (or bribe) a friendly scientist.
- ◆ Bribe a government official.

authorities (dominator minions) may include teachers, lawyers, politicians, religious leaders, biotech scientists, television announcers, and doctors.

Laws that restrict people’s access to real resources ensure that they perpetually remain psychologically and materially dependent, just like children. Such laws are made under the guise of protecting the populace from what’s dangerous. To this end, dominators use the classic strategy of reversals: what’s dangerous is heavily promoted and available (for example, aspartame), and what’s healthful is vilified and prohibited (for example, raw milk). Examining what people are legally permitted to access reveals the intentions of the lawmakers.

To prevent people from rebelling against those who try to dominate them, the power elite uses another classic tool: convince everyone that the true oppressors are not the dominators, but others. These “others” may include people who have a different skin color; who are of the opposite sex, particularly women; who are aging or physically challenged; who love others of the same sex; or those who don’t have enough to eat or a decent place to live. The ways to separate ourselves from others seem limitless, even though each of us (though unique) has the same basic needs.

Those whose choices are heavily restricted often fight each other for the crumbs that are left, rather than realize where the trouble actually started. This tactic is known as

The Dominator Mentality

To those accustomed to treating others with kindness, one of the most difficult concepts to grasp is how some people can live their lives without compassion, even behaving with deliberate cruelty toward others. It's as though one were suddenly whisked from one's generous and caring homeworld onto a foreign planet of strange beings. It's difficult to deal with indifference and callousness when these traits feel so alien to one's own nature. However, for those navigating dominator territory, it's imperative to understand how the dominator mentality operates.

Dominator paradigm adherents might feel beautiful or talented, important or special or worthy—but not because they feel intrinsically good and alive within their own skin. Their feelings of self-worth stem from how much more wealth, prestige, and social status they have compared to others. Instead of connecting to qualities generated from the inside, they rely on qualities dependent on the outside. Instead of connection, they embrace a façade. And instead of self-mastery, they prefer the thrill of controlling the lives of others. Because they depend on external resources (land, animals, plants, minerals, things, and other people) to make them feel whole, dominators must constantly replenish their supply. However, depending on something external for one's value and sense of self creates a never-ending black hole of "not enough." This is why it can be a lengthy and difficult process to change the dominant paradigm.

No one who feels connected to self (and thus to the universe, creation, Source) would dream of harming another. People who mistreat others are separated from their own minds, bodies, and spirits. By treating others as expendable commodities, dominators turn themselves into commodities. Therefore, mistreating others is, quite literally, mistreating oneself, although the dominator mentality does not recognize this.

As the dominator mentality becomes entrenched in the psyche, dominators condemn in others the traits they're unable to accept in themselves. Psychologists call this disowning of one's "shadow" side and assigning it to others, *projection*. Judging and blaming others generates a false sense of self-esteem. It also poisons all relationships, even relationships with other dominators. Someone who condemns others is actually very lonely because condemnation separates us from others and from ourselves. Reflecting and reinforcing this domination-separation paradigm, the world becomes polarized into:

Us / Them
Male / Female
Superior / Inferior
Observer / Observed
Conqueror / Conquered
Objective / Subjective
Powerful / Powerless
Scientific / Creative
Active / Passive
Strong / Weak
Win / Lose

The hierarchical mindset of "Us vs. Them," "Superior / Inferior," etc., does more than keep the world polarized and its inhabitants isolated. This mindset also encourages the mistreatment of anyone who we perceive is not like us. *Someone who's different isn't worth very much*, the rationalization goes, *so it doesn't matter how badly we treat them*. We pay a steep price for living under a dominator paradigm. Besides relationships, our work, play, politics, child rearing, science, religion, art, and healing modalities all reflect—and perpetuate further—this alienation. The antagonism toward others that's encouraged by alienation eventually escalates into aggressive, destructive, and violent acts: vandalism, theft, sexual abuse, murder, war.

Because alienation is encouraged, anyone at any time can become a dominator. However, a victimizer cannot exist without a victim. People who reinforce their role as victims allow others to victimize them, thus perpetuating the dominator mindset. In such a culture, tolerance can be abused. Tolerance is essential for an egalitarian society, but this doesn't mean that we should capitulate to victimizers' demands or fail to erect strong personal boundaries. Understanding victimizers doesn't mean condoning or allowing their behavior.

Dominators often pretend to be advocates for those whom they dominate. They may also claim that *they* are the ones being victimized. This helps them hide and avoid being held accountable for their acts.

The dominator mindset may be highly visible, but it's not the only paradigm. Under "Win/Win," everyone contributes the best that they can, and respects the person and property of others.

divide and conquer. Throughout history, divide and conquer has proven to be an effective way to further the goal of the dominator paradigm. The dominator credo says: “If they don’t have enough to live comfortably, convince them that others in a similar position are responsible. Make them so mistrustful and fearful of each other that they’ll be too busy fighting among themselves to come after us. If they do have enough to live comfortably, convince them that they’re worthless unless they have more. Then they’ll be too busy seeking status and more possessions to bother with us.”

People all over the world accept the labels that the dominator paradigm assigns. It’s not uncommon for one group of people to feel indifference, mistrust, or hatred toward other groups. Also, people who struggle daily may understandably envy or hate those whom they believe don’t have to struggle. But negative emotions poison us and prevent healing on all levels. We can be so busy pointing accusing fingers at our neighbors that we forget our capacity to be considerate, loving beings.

Although the elite’s access to material resources and status does help make their lives easier, the dominator paradigm is destructive to them as well as to everyone and everything else they try to control (see Insert, “The Dominator Mentality”).

Privacy in This Electronic Age

We have become dependent on—and outright addicted to—technology in ways we could never have foreseen. Chapter 1 (pages 11–16) discussed the effects of this on our health. Also affecting our health (though less directly) is our vulnerability to the spyware that is increasingly being embedded in electronic items we use every day.

Being online makes us very vulnerable to invasion. If you use Google, the most well known search engine, you’re tracked whenever you make online purchases. This is why many articles you access on the web are accompanied by ads for items you have bought or viewed. Google gives information on all its users to the US government—which isn’t surprising, considering that circa 2003, Google accepted two million dollars from the National Security Agency (NSA), well known for specializing in surveillance.⁴⁰ In 2017 Google Chrome, the widely used web browser, was given the ability to scan *all* the files on any computer whenever there were mandatory updates. Those files can be accessed by the government or police.

You are also vulnerable if the Windows 10 operating system from Microsoft is installed on your computer. This system has built-in spyware that tracks every Internet site you visit by analyzing and recording all of your keystrokes

and clicks of the mouse. Microsoft then sells this data to third parties, which earns the company more money than it makes from its software sales. (That is why Microsoft offered customers free upgrades to Windows 10, and advertised so relentlessly for it.) In addition, Windows 10 allows the installation of third-party software. Customers must click the “I approve” box during installation in order to even use the operating system. The third party programs that are installed could be games, but they could be spyware, too; and Microsoft doesn’t pre-screen any of these programs. People who want to remove the spyware require help from an experienced computer technician. Future versions will undoubtedly have these features too.

The term “conspiracy theory” was created in the 20th century to debunk alternative views that threatened establishment lies.

—J.D. Heyes
Natural News, March 28, 2017

Our fondness for new and fancy gadgets (including, of course, our “smart” phones) has brought our lack of privacy to a new level. Consider Alexa, a wireless interactive virtual assistant whose software is housed in a small cylinder that rests on a table or other surface. Created by Amazon, Alexa is promoted as helping in countless ways—from choosing your radio stations

and turning your lights on and off, to making phone calls and telling you the balance in your bank account. Not only is Alexa voice-activated, but it records as well as listens. Alexa can malfunction, and it often does. It can be hacked. And every single interaction consumers have with their fascinating and sometimes amusing virtual assistant is fair game for any government agency that wants to hear or use that data. However, as the Electronic Privacy Information Center wrote in July 2015, “Americans do not expect that the devices in their homes will persistently record everything they say. It is unreasonable to expect consumers to monitor their every word in front of their home electronics. It is also genuinely creepy.”⁴¹ We have lost the right to choose what we share.

Televisions as well as phones are now “smart.” People watching commercial TV are bombarded by products if they own an Alexa. When a commercial is aired, an ultrasonic signal from the TV speakers activates Alexa and tells it to open a browser on the television screen so consumers can learn more about the product.

Google, when installed on Android “smart” phones, behaves in ways similar to Alexa. Phone owners are told that its recording software is activated only when they say “okay, Google” (or a similar directive). However, simply saying “okay” during normal conversation can also activate the phone to record. Plus, the microphone can switch on at any time. The feature can be turned off, but only temporarily; the “off” setting must be renewed regularly.

The privacy of children is also at risk. In 2015, the Mattel toy company released a high-tech Barbie doll

We have the possibility . . . to create a genuine global community which is different from a self-congratulatory globalism that masks economic inequality. This new way of being is sensitive to human suffering and oppression everywhere. It is committed to a politics of healing. . . . In this transformation of consciousness we have a unique opportunity to find the peace for which . . . so many . . . have longed.

—John E. Mack, MD
founder, Center for Psychology and Social Change
(in *Centerpiece*, Autumn 2001)

equipped with a recorder and microphone. Using WiFi, the activated doll records a child's conversations, transmits them to a control center for processing, and with the help of speech-recognition software, replies, using one of 8,000 pre-programmed lines. It's disturbing enough that children are being taught that this constitutes actual and satisfactory relating to a human being. To make things worse, in order to implement this training in artificial relationships, sensitive personal information is being stored with no guarantee that it can't (or won't) be used for unscrupulous purposes later. A director of a cybersecurity lab was quoted as saying that Mattel is "collecting data from kids—hackers [could be] getting access to private info."⁴² In parts of Europe, these dolls are seen as a security threat and are banned, but recordable Barbie is heavily promoted in the US.

Power companies that supply us with energy also invade. Their "smart" meters digitally read how much power the consumer uses (instead of an employee actually traveling to the building and visually taking a reading). However, smart meters transmit Gigahertz signals that interfere with neurological, hormonal, and other biological functions. Power companies install these meters even if consumers object. The meters invade in another way too: power companies are legally allowed to remotely turn off your power if the company *believes* that you're using too much electricity—even if you have paid your bill!

Our involvement with "smart" technology is not only acclimating us to allow anyone access to our private lives—the dominator strategy of reversals has also given us the opposite problem, *lack* of access when we most need it. For example, one would expect an Internet search engine to be impartial. But the most widely known and used search engine, Google, is heavily biased. Independent websites that contradict the opinions of Google's corporate advertisers are listed last, or not at all. This reduces our access to many types of information that the mainstream doesn't like—whether about politics, or nutrition and healing. Google owns the website YouTube, so films about holistic health (including the dangers of vaccines) keep being removed. By March 2018, Google had terminated the accounts of

Mike Adams (of Natural News) and others who discussed political repression and holistic alternatives to drugs. Not surprisingly, Google is partnered with WebMD.

The web-based social media network Facebook has become a surveillance company that monitors and censors information on the Internet. The site deletes posts and closes the accounts of anyone with differing political and social beliefs—in the US, United Kingdom, Vietnam, all over the world. Even governments are trying to censor and intimidate. US citizens who request *public* records are now being sued by their own government!⁴³

Even voting—which has always been upheld as a right, a duty, and *private*—is no longer safe, with the disuse of mechanical voting booths and paper ballots. In 2018, the largest manufacturer of digital voting machines, Election Systems and Software, admitted that its equipment was deliberately installed with remote-access software, which allows it to be hacked from anywhere in the world so votes can be changed. In many locales, the power elite have created laws that these digital machines *must* be used.

The final battleground is in our own bodies (below).

The Battle to Reclaim Our Bodies

The United States federal government passed a law requiring all public and private health care providers to convert to electronic health records (EHRs) by January 1, 2014, if they wanted to keep their existing reimbursements for Medicaid and Medicare (programs for financially needy and older people, respectively). Today, the use of EHRs has spread worldwide. As a result, our health records are online for anyone to access (or hack).

Even the drugs we take are becoming electronic. In November 2017, *The New York Times* described the technology in "First Digital Pill Approved to Worries About Biomedical 'Big Brother.'"⁴⁴ A copper, magnesium, and silicon sensor in the digital pill generates an electrical signal when the pill contacts stomach fluid. After a few minutes, the signal is detected by a patch that's worn on the rib cage, which via Bluetooth sends the date and time of pill ingestion to a cell phone app. Finally the information is transmitted to a database, accessible to the pill taker's doctor and four others chosen by the person. Proponents praise the benefits: pill takers with poor memories are helped and money is saved.

The first volunteers for this digital monitoring were people who were diagnosed with schizophrenia or depression and took the antipsychotic drug Abilify®. Investigative journalist Jon Rappoport, in his bluntly titled article, "Your Pill Spies On You," wrote, "The Surveillance State has a new eyeball, and it's in the patient's mouth, throat, and stomach. . . . The overriding principle here is:

what starts out as a voluntary program eventually becomes mandatory, for ‘the good of all.’ The voluntary phase is just the warm-up, to secure general acceptance.”⁴⁵ As more people accept technology that monitors what we buy, tracks where we are, and records what we say, pharmaceuticals that reveal when we swallow seem normal.

What about microchips implanted in the body? The tiny metal and glass electronic chips, when scanned, reveal medical records and other data on a networked screen. Humans have been microchipping their pets for three decades (and seeing cancer rates rise, either at the site of the injected chip or in an area of the animal’s body to which the chip had migrated). Now humans are being microchipped. A Cincinnati, Ohio surveillance company called CityWatcher was the first to microchip its employees in 2006. On December 10, 2017, the *Chicago Tribune* celebrated that “Wisconsin company holds ‘chip party’ to microchip workers.”⁴⁶ Is the convenience of opening doors, buying snacks, or logging onto computers with a wave of the hand, worth what we are giving up?

Beyond Politics

We can try to dismantle the dominator paradigm with aggressive confrontation. This can lead to physical injury, fines, or incarceration for those confronting the dominators and their representatives. Or we can choose less aggressive methods (political lobbying, letter writing, and education) that present an alternative point of view to the dominant paradigm and can generate significant positive change. (See Appendix A for grassroots organizations.) However, not everyone wants to become involved in these ways. Most people are overwhelmed by the (deliberately) cumbersome structure of our corrupt political systems. And many simply don’t have the energy or mindset to become involved in politics, due to financial stresses, enforced long work hours, or serious illness.

Nevertheless, we can still positively affect and even transform our environment—simply by changing ourselves. I’m not talking about wishing hard, or so-called positive thinking that ignores the unpleasant aspects of existence to such an extent that it traps people in a haze of unproductive denial. I’m referring to the profound changes that occur, and whose effects radiate out into the cosmos, when we heal ourselves in a deep way.

Many ancient spiritual traditions teach that the most intense and lasting changes begin with the individual. As we will see, this principle is founded on solid science. So, alongside the transformation that’s occurring on social and political levels, we can do powerful inner work without ever leaving our beds. The transpersonal or spiritual level of change is the topic of the next, and final, section.

THE TRANSCENDENT

A Paradigm of Cooperation

The dominant paradigm in America—indeed, most of the Western world—perpetuates a mechanistic view of life. This view negates the complex interrelationships of all living systems, and instead (dis)regards humans as merely a bunch of parts that should perform like a well-maintained machine. If something doesn’t work, we repair or replace the damaged part, rather than try to find the underlying cause of the malfunction.

Such a paradigm not only makes us mechanics, but it gives us what some researchers rightly call *junk science*. Wilhelm Reich, a remarkable and underappreciated 20th century psychiatrist and natural scientist, remarked that with an inferior scientific approach,

living objects are killed in order to study life in the dead organism, a procedure that is bound to result in a mechanical view of life. . . . The individual living object, or even a detail of this object, should not be studied as an isolated phenomenon. The basic dynamic principle of life governs all life; i.e., the organism as a whole and every individual part of the organism. If scientific research is to be truly productive, it should be continuously motivated and guided by the need to view the whole without losing sight of the detail. Mechanical concepts of life must of necessity be methodologically defective.⁴⁷

When using a mechanistic approach, the very data we work with is flawed because so much has been omitted. Thus, we miss a great deal and draw inaccurate conclusions. The inability to perceive holism in our universe reminds me of an analogy once cited by quantum physicist Fritjof Capra. You’re driving a car when suddenly the oil light indicator on the dashboard goes on. You stop the car. But rather than checking the oil, you rip out the oil light, get back into the car, and resume driving. Another way to interpret this vignette is: If you don’t like what you’re being told, kill the messenger. The problem is, this won’t fix the problem. In fact, failing to address the problem will create even more headaches later.

The tendency to filter out certain aspects of the truth is common. “We speak of becoming conscious,” writes Walene James. “To become conscious we must become aware of our viewing lenses and the assumptions that have shaped and colored them. We can’t really become aware of our assumptions until we expose ourselves to realities based on different assumptions.”⁴⁸

Leaving the Hierarchy: from “Patient” to “Client”

Words are powerful. Every scientist knows the necessary precision of the correctly chosen word. Advertisers and politicians manipulate through emotionally charged terms. And poets deliberately create or destroy with carefully placed lines. The word “patient” is potent. It belongs to the allopathic medical model that denotes anyone seeking healing as subordinate to an expert (physician, psychiatrist, naturopath, chiropractor, or some other provider) who’s administering the service. It can be demeaning for a “patient” to call a practitioner “Dr.” if the doctor calls the client by their first name—especially if the practitioner is considerably younger than the person seeking help. This hierarchy often intimidates clients to such a degree that they become discouraged from being active in their own healing process.

Holistic practitioners who use the word “patient” have, to some extent, adopted the hierarchical allopathic medical model. (Did they adopt this paradigm because they want to be accepted and professionally validated by the dominant medical community?) However, by embracing this divisive terminology, holistic practitioners incorporate some of the allopathic mindset. This conflicts with what holistic and natural healing are all about. In a true holistic model, providers of any physical, mental, emotional or spiritual healing art would be wise to discard this outdated hierarchical model and use “client” instead of “patient.” “Client” signifies a customer for whom a service is being provided. It indicates respect, *as an equal*, for those seeking help.

That said, there may be times when only “patient” will suffice—not because of the practitioner’s preference, but because of the client’s. Sometimes people really want to be “patients.” They feel more secure with hierarchical roles because they lack confidence in their ability to learn, to make informed choices, and to heal themselves. They believe that if *they* cannot fix what’s wrong, then as long as they call themselves “patients,” *the doctor* will be able to cure them—because these roles, by definition, make practitioners more knowledgeable and powerful than they (the clients) are. For such people, the wellness provider should try to present a “doctorly” manner because this is exactly what the “patient” needs.

Yet another possibility is this: Sometimes the client simply need a little assistance to actualize his or her potential. It’s amazing what inner resources of self-healing can develop when the practitioner, in the role of authoritative “doctor,” offers some gentle encouragement and information on self-care—thus helping the “patient” to become a confident “client.”

If it were only a matter of “exposing” ourselves to different assumptions, we would have replaced the dominant paradigm long ago with a holistic one. But think of all the obstacles that we allow to hold us back: fear of the unknown, fear of not knowing what to do, fear of not knowing who to trust. Fear of being wrong, ridiculed, abandoned, alone, unloved. It’s important to acknowledge our fears. But what do we do once they’re acknowledged?

Fear can help us or it can hold us back. If I want to walk across a crowded intersection against the traffic light, the justified fear of being hit by a car helps me reconsider my course. But if I’m afraid to leave my house because of the unlikely chance that a car might jump the curb and injure me, this fear is no longer helpful and becomes crippling. What will I allow to guide me? Irrational emotions? Or a lucid, reasoning mind, along with a compassionate heart?

So far, I have discussed ways in which people forget to use their mental faculties and are driven by their fears. Now I will explore how to release or transmute those fears. In order to do this, it will help to envision the world in a way to which some of us may not be accustomed. Let’s take a look at some remarkable discoveries.

Research Outside the Box

In the last century, some extraordinary scientific research has emerged that shows how intimately connected we are to each other. This understanding is not new. What is new is the use of sophisticated experiments to confirm these relationships. The studies that follow can help us improve our ability to heal ourselves and others in some unique and very deep ways.

The Interconnection of Quantum Particles

The oneness of the universe is the central component of all mystical experiences. This has been taught in many ancient cultures, from the people of India to the Chinese to Native peoples all over the world. The interconnection of all life is also one of the most important revelations of modern physics.

This revelation, from a modern physics standpoint, was illustrated by an experiment conducted in 1935 by physicists Albert Einstein, Nathan Rosen and Boris Podolsky. They mathematically computed that if you examined two quantum particles, a change in the spin of the first particle would simultaneously affect the other, even if they were separated. It didn’t matter where these particles were. They could be placed next to each other or millions of miles apart. But there was one detail that the scientists could not resolve. If particle #2 could sense particle #1 and make an instantaneous change based on what the first one was doing, this meant that the signal

between them would have to travel faster than the speed of light. But nothing in the universe travels faster than the speed of light! Or so they thought.

Einstein felt that he simply hadn't discovered the mysterious ingredient that allows this instantaneous communication to take place. Even if he had, in his view this experiment had very little to do with the so-called real world. As it turns out, even the great Einstein could be wrong.

The energy instantaneously connecting two or more particles remained a mystery until the late John S. Bell devised a very complex mathematical proof in 1964 that became known as Bell's Theorem. In quantum physics, if a premise can be mathematically proven, it means that the answer is more than simply a hypothesis or speculation. *It is the truth because mathematics represents reality.* Thus, scientists who understood the importance of the math were very excited about this new knowledge. Bell's theorem essentially proved that despite the inability of quantum theory to predict instant connections between particles, the connections are still there, and they are *non-local*.

"Nonlocality," explains Lynne McTaggart in *The Field*, "refers to the ability of a quantum entity such as an individual electron to influence another quantum particle instantaneously over any distance despite there being no exchange of force or energy. . . . Quantum particles once in contact retain a connection even when separated, so that the actions of one will always influence the other, no matter how far they get separated."⁴⁹

Bell's Theorem was further confirmed in a 1972 experiment by Berkeley professor John Clauser and his associate Stuart Freedman (and in later experiments by other researchers), using an elaborate system involving photons, calcite crystals, and photo multiplier tubes. Without a doubt, one particle "knew" what the other particle was doing. However, the medium of transmission was not light. The late David Bohm (who had been an associate of Einstein and was one of the most respected theoretical physicists at Birbeck College, University of London) stated that because it's impossible, according to the theory of special relativity, for anything to travel faster than the speed of light, what connected two particles could not be energy on the electromagnetic spectrum. Rather, the bond between the particles appeared to be some kind of *information* that transcended space and time as we know it. This information could also be transmitted via *thought*. Although Bohm hadn't yet been able to

identify that energy, these experiments revealed a new way of viewing the universe. In her review of discoveries in the quantum field, McTaggart writes:

Matter could no longer be considered separate. Actions did not have to have an observable cause over an observable space. . . . Subatomic particles had no meaning in isolation but could only be understood in their relationships. The world, at its most basic, existed as a complex web of interdependent relationships, forever indivisible.⁵⁰

The Human as Hologram

Bohm gifted us with another important insight. All information in the entire universe, he said, is contained in each of its parts, like a hologram. A *hologram* is a three-dimensional photograph that's so complete, any piece we cut from it and illuminate with coherent light provides an image of the *entire* hologram. It might be a different view, but all the information is present. Thus, said Bohm, the entire universe had to be understood as a single, undivided, interconnected whole. Furthermore, human beings, as part of that hologram, innately possess the ability of holographic perception.

In the paragraphs below, McTaggart discusses how individuals actually *create* their hologram, or a holographic experience. Note her reference to scalar waves, and to the so-called Zero Point Field from which matter is seen to emerge. (As the ancient Greek Plato taught, energy precedes matter.)

We must cure the current system, which is so seriously ill that a few dozen aggressive and competitive men have the power to destroy all life on Earth.

—Tadatoshi Akiba
mayor of Hiroshima, Japan:
at a peace demonstration in
New York City's Central Park
May 1, 2005

"Scalar" waves . . . are not electromagnetic and . . . don't have direction or spin. These waves can travel far faster than the speed of light. . . . It is scalar waves that encode the information of space and time into a timeless, spaceless quantum shorthand of interference patterns. This bottom-rung level of the Zero Point Field—the mother of all fields—provides the ultimate holographic blueprint of the world for all time, past and future. It is this that we tap into when we see into the past or future. . . .⁵¹

Quantum physicists also point out that *space and time are constructs that can vary*, depending on who is doing the perceiving.

Pure energy as it exists at the quantum level does not have time or space, but exists as a vast continuum of fluctuating charge. We, in a sense, are time and space. When we bring energy to

conscious awareness through the act of perception, we create separate objects that exist in space through a measured continuum. By creating time and space, we create our own separateness.

This suggests a model not unlike the implicate order of British physicist David Bohm.... [His] model viewed time as part of a larger reality, which could project many sequences or moments into consciousness, not necessarily in a linear order. He argued that as . . . space and time are relative and in effect a single entity (space-time), and if quantum theory stipulates that elements that are separated in space are connected and projections of a higher-dimensional reality, it follows that moments separated in time are also projections of this larger reality.⁵²

The ramifications of tapping into this vast holographic sea—over which time and space have no dominion—with thoughts that are faster than the speed of light, are mind-boggling. The ramifications of actually *existing* in this holographic universe are equally astounding. Anything and everything that anyone has ever thought is transmitted, and may even potentially manifest as matter, “someplace.”

Furthermore, within this holographic model, healing—and the potential to impart it—assume entirely new meanings. Following are some unorthodox ways to heal.

The Power of Prayer

One powerful way of transmitting healing beyond time and space is *prayer*. I regard prayer as heartfelt, focused intention of well-being, so this bypasses any specific religious beliefs. Medical doctor Larry Dossey has written extensively about scientific studies that show the curative power of prayer. I find these studies fascinating because they prove what can be achieved by intention—which, like everything else in the universe, is comprised of palpable energy.

Dossey cites studies in which groups of volunteers were given the names of people who were ill and lived long distances away. Then the volunteers were instructed to pray for their healing. A control group consisted of people who were ill, but were not sent any prayers. Those to whom prayers were sent recovered much more rapidly than those to whom prayers were not sent.

One experiment called the MANTRA study—short for “Monitor and Actualization of Noetic TRainings”—was conducted at Duke University, headed by cardiologist Dr. Mitchell Krucoff and nurse practitioner Susan Craven. Heart condition clients who agreed to be part of the study did not know whether or not they received prayer. Their first names were divided randomly into two groups, and were then emailed to Buddhists in Nepal, Jews in Israel, Hindus in India, Catholic nuns, Protestants in North Carolina in the US, and to the spiritual organization

Unity Village in Missouri, also in the US. At the end of the test, subjects receiving prayer had 50% to 100% fewer unwanted (“side”) effects from medications than subjects who did not receive prayer.⁵³ Interestingly, Dossey discovered that when prayer groups are told what kind of illness the person has, the prayers aren’t as effective as those sent by a prayer group that does *not* know the person’s illness. Perhaps the human mind is currently so limited that any outcome we try to predict or control is limited, too.

The Unified Field is built upon dimensionalized sets of scalar standing-wave points, wave strata formed of units of consciousness [whose] . . . energetic relationship . . . form the basis . . . through which the Hologram of Manifestation can be perceived.

—A’shayana Deane

Healing System™, 1999

The Power of Long Distance Healing

According to the recently deceased psychiatrist Elizabeth Targ (who had directed the Complementary Medicine Research Institute, affiliated with the University of California School of Medicine), in the last 40 years over two-thirds of more than 150 formal, controlled studies showed statistically significant positive effects from distance healing. Along with three colleagues, Targ reported the results of two experiments in a 1998 article. Experienced healers from various traditions sent energy to 10 people diagnosed with AIDS (in the first experiment) and 20 people diagnosed with AIDS (in the second experiment) over a 10 week period for one hour a day, six days a week. The average age of the healers was 47. The religious backgrounds of the healers included Buddhism, Christianity, and Judaism. Among the professionals were medical doctors, nurses, psychologists, a Baptist minister, a qigong master, and a Native American shaman. “A majority of healers,” Targ wrote, “reported working with chakra imagery for healings; other frequently reported modalities included prayer, visualization, and work with crystals.” For every person who was treated, there was an untreated control person diagnosed with AIDS in a similar physical condition as the treated person.

The healers worked on a rotating schedule so that each week, each patient was treated by a new healer. Thus, by the end of the study, each patient had received “healing effort” from a total of ten different healers. Each week, a head and shoulders photograph of one of the treatment patients was sent via overnight mail to a healer who was then instructed to “hold the intention for the health and well-being of the patient” for one hour a day during the time the patient was assigned to them. The healers were given the first name of the patient, the patient’s [blood] CD4 count, and two or three sentences describing active elements of their illness. Healing techniques were quite varied.⁵⁴

Targ also described the researchers’ efforts to ensure that each subject’s expectation, guess, or belief that she or he was among those being healed, played no part in the outcome. At the end of six months, the data collectors saw clearly that the participants who had received treatment:

had acquired significantly fewer new AIDS-defining diseases than people in the control group, their overall illness severity scores were significantly lower, they had significantly fewer hospitalizations, and those hospitalizations were significantly shorter. In addition, treatment patients showed significant improvement on psychological status, including decreased depression, decreased anxiety, decreased anger, and increased vigor, compared to controls.⁵⁵

The Power of Group Intention

If just a few individuals can affect others over distances, imagine the power of a *group*. In Chapter 3, I cited experiments showing that when practiced regularly, the Transcendental Meditation® technique has pronounced positive effects on the body, including decreased blood pressure, decreased lactase levels in the blood, and overall better health. I also mentioned increased coherence in brain waves. What I’ll cite now are studies showing how *other people’s behavior changed when enough meditators were living in the specific area that was being examined*. Although I’m focusing on one form of group intention (meditation), and on only one form of meditation, the power of focused group intention can manifest in many forms and arenas. The Transcendental Meditation® technique is convenient and fun to cite because it has been so heavily investigated.

Combined, the researchers and professors who conducted the following studies have degrees in biophysics, sociology, government administration, and physics. They

Plants Recognize Their Siblings

Researchers at McMaster University in Hamilton, Canada, have found that plants get fiercely competitive when they’re forced to share their pot with strangers of the same species, but they’re accommodating when potted with their siblings.

“The ability to [recognize] and favour kin is common in animals, but this is the first time it has been shown in plants,” said Susan Dudley, associate professor of biology at McMaster University. “When plants share their pots, they get competitive and start growing more roots, which allows them to grab water and mineral nutrients before their neighbours get them. It appears, though, that they only do this when sharing a pot with unrelated plants. When they share a pot with family, they don’t increase their root growth. . . . Plants from the same mother may be more compatible with each other than with plants of the same species that had different mothers.”

—Nexus, September–October 2007

published the results in well-known scientific, legal, and medical journals. The following are summaries of just a few studies, from earlier ones to more recent:

- ◆ A 1981 study, published in the *Journal of Criminal Justice*, focused on cities with populations larger than 10,000. “The years 1967 to 1972 served as the preintervention period, while 1972–77 formed the postintervention period [during which people were taught the Transcendental Meditation® technique, making the number of meditators in the experimental meditating cities almost six times higher than the number of meditators in the control cities]. The primary variable of interest was the change in the crime rate over these two periods. Crime rate figures were calculated as the number of FBI Crime Index crimes per 1,000 population.” After comparing the experimental meditating cities to the control cities—which had been matched for population, average crime rate, and other factors—the crime rates in the experimental meditating cities were found to be “significantly different. A decrease in crime rate was found in experimental cities. The decrease was evident both immediately after the cities reached the 1-percent level of TM program participation and in the crime rate trend during the subsequent 5 years.”⁵⁶
- ◆ In June and July of 1993, a very interesting experiment, the National Demonstration Project to Reduce Violent Crime and Improve Governmental Effectiveness, was conducted in Washington, DC in the US. This was

an area known for its high rate of violent crime. The research team, headed by physicist and Nobel Prize nominee John Hagelin, arranged for approximately 4,000 advanced practitioners of the Transcendental Meditation® and TM-Sidhi® programs to temporarily inhabit the nation's capital. To ensure scientific accuracy, an independent 27-member Project Review Board—consisting of police department and government personnel, leading university sociologists and criminologists, and civic leaders—first approved the research protocol and then monitored the study.

At the end of the study, with all variables statistically accounted for, results showed that violent crimes (which included rape, robbery, homicide and aggravated assault) decreased by 24%. Statistically, the chances that this could occur were less than two in one billion.⁵⁷ The researchers explained that the *collective consciousness*—a pool of energy, comprised of everyone's combined consciousness—influences individual behavior. As more individuals become stressed, stress in the collective consciousness increases too, negatively affecting individuals (as demonstrated by augmented levels of violence, crime, and other negative social behaviors). However, the inverse is also true. As stress levels of individuals plummet, their combined calmness contributes beneficially to the collective consciousness, which in turn positively influences the behaviors of other individuals. The positive behaviors are characterized by increased levels of coherence and harmony in the brainwave patterns and energy fields of people (and also animals). Coherence is intelligent, Hagelin remarked; and this underlying field of intelligence was none other than the “Unified Field” or “Zero Point” field that quantum physicists have named.

- ◆ A 2005 article, “Alleviating Political Violence through Reducing Collective Tension: Impact Assessment Analyses of the Lebanon War,”⁵⁸ studied the impact of a statistically significant number of meditators, versed in the advanced TM-Sidhi® program, who were stationed in Israel for two months in 1983. Statistics, recorded and analyzed daily, showed that on days that the number of meditators was high, war deaths in neighboring Lebanon dropped by 76%. In Israel, indicators of social stress—including fires, crime,

and traffic accidents—also correlated strongly with changes in the numbers of TM® meditators. (The researchers statistically factored in other possible stressors, such as holidays and weather.) Remarkably, war-related fatalities decreased by 71%, war-related injuries dropped by 68%, and cooperation among antagonists increased by 66%.

These studies have profound applications. A population consisting of just 1% of highly focused people whose brainwave cycles are stable and serene, can calm the attitudes and behavior of those around them whose brainwaves are chaotic. This is like placing a vibrating tuning fork beside another, non-vibrating tuning fork, causing that second tuning fork to reverberate in a manner similar to the first. In physics, this phenomenon is called *entrainment*. In spiritual circles, this is known as being in resonance or in harmony with what is around you.

Freedom is not simply about winning some perceived battle against tyrants who desire to control our lives. Nor is it solely about creating the financial means to do what you want, when you want. Freedom is really about creating the life that wants to spring forth from the depths of your spirit.

freedom and privacy advocate, 2001

Healing with the Heart

A different type of explanation as to how and why prayer, long distance healing and group meditation work, has been offered after two decades of experiments by Glen Rein, Rollin McCraty, Mike Atkinson, and other investigators. Using sensitive electronic medical and laboratory equipment such as an ultraviolet absorption spectrophotometer, an electrocardiograph (ECG) to measure heart rhythms, and an electroencephalograph (EEG) to measure brain waves, the researchers studied what effects (if any) one's intentions and emotions have on others.

First, the signature of various emotional states had to be established. “Since the heart produces the strongest electromagnetic field in the body, the basis of CNI [cardioneuroimmunology] is that the heart is the master oscillator,” McCraty et al. wrote.⁵⁹ The word “master” to describe the heart is an appropriate term. The heart's electromagnetic signals—which scientists classify basically as either coherent or incoherent, according to how these signals register on the ECG—are generated throughout the entire body. Hence, the entire heart field is perceived by every cell. Twenty subjects, who were pre-tested and pre-selected for their skill (or ineptness) in accessing and controlling their emotions, were connected to brain and heart wave machines. The machines simultaneously monitored the top of the head, forehead, heart, and base of the spine on the subjects. The researchers found that:

when the heart is radiating coherent frequencies, the rest of the body's subsystems and cells, including the brain, operate within that coherent electromagnetic field. . . . Anger, frustration and worry created higher percentages of *incoherence*, while feelings of love, care or appreciation created higher percentages of *coherence*. . . . Changes in the EEG, as well as the ECG, are also seen over time as a person practices mental and emotional self-management to transform negative emotions into positive ones.⁶⁰

The above findings make sense. After all, as McTaggart remarks, "Consciousness, at its most basic, [is] coherent light."⁶¹

Before I discuss further experiments by Rein and McCraty, I want to explore the nature of water, and the research of one man whose findings were celebrated worldwide, both during his life and after his death.

The Structure of Water

The late Japanese photographer Masaru Emoto inspired people all over the world with his book *The Message from Water*. Emoto took photographs of frozen water crystals that either had organized crystalline shapes or disorganized chaotic shapes, depending on whether they came from a clear mountain spring or a contaminated industrial pipeline. Emoto's even more unusual experiments showed that the shapes of water crystals also depended on the *attitudes* and *emotional states* that the water absorbed.

When we grow plants by saying sweet things to them such as "please grow up healthy" or alternately by saying mean things such as "go on and get withered," . . . the plants show a clear difference in [how well they do]. . . .

People can become joyous and encouraged when they listen to music, all because the water contained in their bodies goes through a change. The vibrations of music and words transmitted through the air affects water more than any other element. The vibrations of music and words affect the water that is contained in plants and food. . . . Good music and kind words must exert a positive effect on water.

Is there any way to demonstrate this theory? Pictures of crystals are wonderfully effective as a method to view the effect that music and words exert on water.⁶²

Emoto and his colleagues photographed the water crystals using rigorous scientific procedure. "We selected distilled water as the base water to do our experiments on

because it has a simple crystal structure," Emoto related. First, photos were taken of the plain water crystals. Then the water was melted and subjected to music. Finally it was re-frozen, and photos were again taken. "As a result of trial and error," Emoto explained, the researchers decided to place the distilled water between two speakers and play an entire piece of music at normal volume. Interestingly, a very important part of the experiment involved tapping the bottom of the water bottle before letting it sit overnight. The bottle was tapped again the next day before the water was frozen to make crystals. Through the tapping, "information seemed to be transmitted through the water causing the crystals to activate."⁶³ Notably, homeopathic remedies are made by tapping and shaking.

The music that was played ranged from European classical to a movie soundtrack (*Seven Years in Tibet*) to rock and roll. What excited Emoto was how the crystal patterns seemed to visually reflect the musical themes. The works of Beethoven, Mozart and Bach formed complete and gorgeous crystals—although some "Bach water" crystals seemed endless, one sprouting from another, much like the composer's repeating and interwoven musical themes. Chopin's "Farewell Song" showed tiny crystals that were distinctly separated. The water crystal embodying a Korean folk song about two lovers who became separated crossing a mountain pass displayed an otherwise perfect hexagon with a chaotic center and a split in one side. A Kawachi folk dance produced a flower-like crystal, apparently confirming Emoto's comment that "for hundreds of years, this music has been cherished and sung by many people and because of this, it may have some healing power."⁶⁴ Recordings of the new age performing artist Enya, as well as Hado (Japanese healing music), likewise produced crystals that were pleasing to the eye.

As you might guess, different music produced very different shapes. A hit song by a popular Japanese group

If the healing facilitator can feel love, reverence, respect and honor for the Divinity within themselves, they will also transmit these qualities . . . to the client. The quality of love brought into the healing facilitation experience will directly affect the success of healing assistance given. Love the self, and know that all beings possess an unalienable worth and value as a living part of the Divine. Begin to cultivate this awareness within your personal life and you will greatly increase your effectiveness as a healing facilitator. Love, honor and respect yourself, your feelings, your dreams and your desires, so you may better love those you wish to serve.

—A'shayana Deane
The Kathara Bio-Spiritual Healing System™, 1999

produced squares, not the usual six-sided structure into which water crystals usually form. “Hit music does not always contribute to the production of well-formed crystals,” Emoto observed. He then described his personal reaction to the water shapes produced by heavy metal music. Heavy metal (an interesting name)—which is more like random noise than music—has correspondingly disharmonious waveforms compared to most other types of music, which have harmonious waveforms. (See Appendix C, “Healing with Electromedicine and Sound Therapies,” for more information.) Not surprisingly, the water crystals from heavy metal music were artistically less beautiful. “This music,” Emoto explained, “is filled with anger and seems to be denouncing the world. Subsequently, this crystal’s basic well-formed hexagonal structure has broken into perfect pieces. The water seems to have reacted negatively to this music. We are not saying that heavy metal music is bad, only that there must have been a problem with the lyrics.”⁶⁵ These results are consistent with other experiments in which cows exposed to classical music behave in a tranquil manner and produce ample milk, whereas cows exposed to synthesized, heavy metal music clearly become agitated and produce less milk.

The last of Emoto’s experiments that I will describe involve words alone, without music. Words have impact because there is *emotion* and *intent* behind the words. “What kind of reaction does water show to words or to the sounds that words make?” Emoto asked. Even the tone of voice can make a difference. “For instance, there is a great difference between angrily yelling ‘You fool!’ and saying ‘You are a fool’ in a gentle way.”⁶⁶ Onto bottles of distilled water, Emoto and his colleagues taped pieces of paper containing various words and phrases. To maintain consistency, the messages were typed by a word processor rather than handwritten. The studies were done more than once, and the results were consistent each time. You probably can guess what happened. “Thank you,” “I love you,” “Love/Appreciation,” “Soul,” “Angel,” and “Beautiful” all produced lovely crystals that were pleasing to the eye. “You fool” (said angrily), “You make me sick; I will kill you,” “Demon,” “Devil,” and “Dirty” produced chaotic, truly ugly shapes. Significantly, “Do it” produced a hollow round interior with irregular edges, while “Let’s do it”—suggesting cooperation and connection rather than domination and hierarchy—produced a crystalline shape.

Emoto also noted the differences between the structures depicting “Thank you” in English and Japanese. The “thank you” crystal in Japanese, he remarked, is eerily similar to that produced by Bach’s Goldberg Variations. “Goldberg Variations was composed by German-born Bach to express his gratitude,” Emoto reflects. “The word ‘Thank you’ in Japanese exists to help us express gratitude. . . . English must have derived differently.”⁶⁷

The theme is crystal clear. *What we think affects us and others profoundly*. Mr. Emoto’s experiments have enormous implications for human (and animal) healing, as our bodies consist of about two-thirds water.

Changing Our DNA

Glen Rein and Rollin McCraty were used to conducting novel experiments. But what they discovered surprised even them. Human volunteers were asked to direct specific feelings and thoughts toward living DNA samples taken from a human placenta. The DNA—whose two strands are normally interwoven—had been exposed to heat to make the strands unwind. “Individuals trained in generating focused feelings of deep love showed high coherence ratios in their ECG frequency spectra, and all were able to intentionally cause a change in the conformation of the DNA,” wrote Rein and McCraty in “Modulation of DNA by Coherent Heart Frequencies.” That “change”

What many people don’t realize is how dynamic the structure of DNA is. The base pairs are always moving and vibrating, electrons are migrating, holes are opening up and closing through the center of the DNA. Nothing stays still for more than a femtosecond here or a millisecond there.

—Jacqueline K. Barton,
professor of chemistry, California
Institute of Technology
quoted in *The New York
Times*, March 2, 2004

in the DNA’s form consisted of nothing less than *the DNA rewinding back into its intact helical structure!* (DNA emits photons, or light. The winding and unwinding of the DNA is measured by how much ultraviolet light, at the wavelength of exactly 260 nanometers, it absorbs.) As might be expected, the subjects with the most coherent emissions had the strongest effect on the DNA, while those individuals “who showed low coherence ratios, although in a calm state of mind, were unable to change the conformation of the DNA.”⁶⁸

In another paper, “Local and Non-Local Effects of Coherent Heart Frequencies on Conformational Changes of DNA,” Rein and McCraty wrote about subjects who were located as much as one-half mile from the DNA, but were still able to rewind the two strands.

The results of this study indicate that the heart’s energy field can directly modulate these basic cell functions [such as the creation of proteins and enzymes], via a direct action on DNA. . . . This

energy transfer is distinctly different from the known electrical and chemical communication from the heart to the brain. . . . The unusual ability of heart energy to carry three different frequency patterns associated with different intentions suggest a non-electromagnetic information carrier [scalar waves]. . . . *Human intentionality produces effects which defy conventional laws of electromagnetism with respect to their independence of space and time. The long distance effects observed here support these observations and indicate that coherent heart energy may be a carrier for such non local effects.* The implications of this research suggest a novel mechanism for interpersonal, heart-felt communication between individuals which involves coherent heart energy. [emphasis added]⁶⁹

Thus we have scientific proof that positive emotions produce coherent heart energy; that coherent heart energy produces coherent brain waves and oscillations in the cells, which beneficially affect the entire system; and that individuals who emit coherent heart frequencies can literally heal on the cellular level.

In another paper, “Effect of Conscious Intention on Human DNA,” Rein explores in greater detail the effects of *specific* intentions. A healer named Leonard Laskow consecutively assumed five different states of consciousness, during which he focused on three Petri dishes containing DNA of tumor cells. “The growth of tumor cells in culture was chosen because it could be monitored quantitatively using state of the art biochemical techniques,” reports Rein, and because it was “highly relevant clinically.” Laskow described being in a state of “transpersonal unconditional love” in all five experiments, which “allowed him to be in resonance with the tumor cells.” The five different mental intentions that were “studied for their biological activity” are as follows:

- ◆ Returning to the natural order and harmony of the cell’s normal rate of growth, i.e. before they were transformed into tumor cells.
- ◆ Circulating the microcosmic orbit [presumably, this means that Laskow was merged with the cells at their atomic level].
- ◆ Letting God’s will flow through his hands, i.e. a transpersonal intention.
- ◆ Unconditional love, i.e. no specific direction to the energy was given.
- ◆ Dematerialization into the light and/or dematerialization into the void.⁷⁰

I sometimes ask people, “Can you be aware of your own presence? Not the thoughts that you’re having, not the emotions that you’re having, but the very presence of your very being?”

You become aware of your own presence by sensing the entire energy field in your body that is alive. And that is the totality of your presence.

—Eckhart Tolle (born 1948),
author of spiritually-oriented books,
including *The Power of Now* and *A New Earth*

Together, Rein and Laskow discovered that a *combination of heart-centered energy (love) and mind-centered energy (focused mental attention) produced the greatest results.* For instance, allowing God’s will to flow through his hands had only half the effectiveness as intending the cells to return to their natural order, the normal rate of growth. Generalized, unconditional love did not stop the growth of the tumor cells. Interestingly, when Laskow was in the “microcosmic orbit” state of consciousness, he could will the cells to either decrease or increase their rate of cancerous growth, by about the same percentage. Even more instructive, Rein points out, intention “produced the same 20% inhibitory effect as did imagery alone.” However,

when the image of few cells in the Petri dish was combined with the intention for the cells to return to their natural order, the inhibitory effect on cell growth was doubled to 40%. *These results therefore suggest that imagery and intent each contributed equally to inhibiting the growth of tumor cells in culture, and that their effect is additive when combined together.* [emphasis added]⁷¹

The data from Rein and his colleagues topple many of the concepts we’ve inherited from the Western medical model. Take the assumption that we’re doomed to repeat the illnesses of our ancestors. Physicians reinforce this mindset because for diagnostic purposes, they partly rely on health history questionnaires that reveal patterns in a family tree. So if, for example, your parents or grandparents had diabetes or heart problems or cancer, it’s assumed that your chances of developing those ailments increase. Now we know, however, that people can alter their presumably fixed genetic expressions with dietary changes, exercise, herbs—and focused intention. “It is well established in the molecular biology community, but unknown [to] most people,” comments Rein, “that the primary structure of DNA does actually change. We are therefore not [necessarily] stuck with the genetic blueprint passed down to us from our parents.”⁷²

Cellular biologist Bruce Lipton agrees. His books explaining how DNA is controlled by signals from outside the cell (including positive and negative thoughts) have been translated into several languages and are popular worldwide. Lipton's research, and the recognition that old beliefs can sabotage us and conflict with our desire for positive change, inspired Rob Williams to develop a therapeutic modality called PSYCH-K®. Through the use of certain body positions, movements, and statements (derived via muscle testing), PSYCH-K® helps both hemispheres of the brain communicate with each other. This allows the subject to access and harmonize both the conscious and subconscious minds and the left and right brain, which working together help us achieve goals pertaining to self-worth, relationship, career, prosperity, health, and more.

Some types of holistic healing do not even use herbs. For these modalities, we use ourselves as the vehicles for healing, along with our own focused intent.

Love As a Resonance

As with all thought and feeling, love itself is a resonance. Like entrained tuning forks, the frequencies of love oscillate, creating positive effects in people, animals, plants, and minerals. And, like a particle in one portion of the galaxy that "knows" what another particle is "doing," the frequencies of love oscillate through space and time.

Love is, of course, a vital component of healing, regardless of whether the facilitator is a medical professional (establishment or holistic), a counselor, an energy worker—or you. A'shayana Deane, who teaches courses in physics and spirituality, writes:

In terms of universal physics, love is an energy reality, a state of vibrational harmonization, or co-resonance of frequency that allows an energetic bridge to build between individuals. It is through this energetic bridge of frequency that one can assist in running healing energies that will facilitate the healing process of others. Without the *sentiment and frequency of genuine love*, one cannot energetically facilitate the healing of another. *Love is the essential ingredient in healing* . . . it allows the opening of facilitator and client's bio-energetic fields to the universal frequencies of the interdimensional [scalar wave] spectrum. Cultivating the ability to embrace and hold the frequencies of Universal or Omni-Love is the responsibility of any true healing facilitator. The emotionally experienced reality of the *frequency*

of love takes many forms. In healing facilitation it is important to assess the most appropriate form of love to engage with each individual client.⁷³

Deane discusses three form of love. The first, soft love,

[is] the kind, gentle, nurturing, soothing love often displayed by mothers comforting their infants. Soft Love works well with clients who possess some degree of spiritual maturity and who have cultivated the ability to hold some degree of a love frequency within themselves. . . . [and who can] accept personal responsibility for . . . their actions and their emotional reaction patterns, and who do not attempt to manipulate, drain energies from or place blame on others. . . .

Soft Love is a vulnerable love . . . [requiring] one to show the self as it is, honestly expressing personal feelings tempered with kindness. Soft Love is not *approval seeking* . . . [but] genuine, honest and *self-generated*. . . . It is understood that personal value is implied by the fact of existence and is not determined by the approval or validation of others outside of the self and the personal relationship to the Divine.⁷⁴

Tough love is very different from soft love.

Certain clients who come to a facilitator for healing assistance bring with them a great need for . . . spiritual maturity. They may demonstrate demanding, arrogant or pushy attitudes and refuse to accept responsibility for their personal actions and resulting consequences. . . . Because they are *wounded within*, they have not yet developed the self-control or maturity necessary to treat themselves or others with kindness, respect or love.

Individuals who display unreasonable behaviors or attitudes pose quite a challenge to the love-based healing facilitator. [Facilitators who use] Soft Love . . . will often find themselves as a scapegoat for the individual's personal problems, may have their energies and time excessively *drained* by such clients, and might possibly be subjected to outright verbal or physical *abuse*. Clients exhibiting such personality traits are struggling within themselves to *gain control* over the various *conflicting portions* of their personal energies, and they tend to objectify this internal conflict . . . in the form of *power struggle* with others.

Personalities trapped within cycles of subconscious self or other-abusive attitude patterns need *love* more than anyone, but most

often their behaviors push others away. . . . Often such personality traits effectively keep the individual from seeing themselves and the inner pain and conflict from which they attempt to hide. To facilitate healing in such individuals without succumbing to their manipulation, aggression or abuse requires that the facilitator adopt a posture of Tough Love. In Tough Love the facilitator clearly establishes *personal boundaries* . . . as to what treatment they will and will not accept. If the client crosses those boundaries, the facilitator *assertively addresses the issue* with the client, requests that the offensive behavior cease, and provides *clear consequences* as to what will occur if the offense continues. . . . The facilitator recognizes that they are only assisting the client to continue with the self-destructive patterns by condoning or allowing offensive behavior, and chooses to *love the client enough to confront the pattern* so that it may begin to release. In *lovingly, calmly, but firmly confronting* poor behavior, and *setting clear boundaries and consequences*, the facilitator assists such clients to temporarily find a new pattern of action because the old one does not work. . . . The Tough Love approach frequently requires facilitators to demonstrate that they hold their own power, even in the face of client disapproval.⁷⁵

What Deane calls omni-love appears to correspond to what many meditators refer to as the Unified Field, and quantum physicists call the Zero Point field.

a state of full frequency resonance with *everything existing* in the many universes. . . . It is a *transcendent love* that is attached to no thing but is *at one with all things*. . . . The self is known as an *extension of God*, or the *Divine Source*. . . . All things and beings are known as *simultaneous expressions* of the *one-self* that is God-Source. From this state of transcendence in love, all activity is understood to exist within the reality of *love*, and all conflict and strife are viewed as the *One-Self progressively expanding the ability of its expressions to carry the frequencies of energy that constitute One-Love*, a state of *total vibrational frequency co-resonance with the cosmos*. . . .

Omni-Love is soft, tough, and enduring, honoring Self, Other, and the Divine

simultaneously. . . . Strive to bring Omni-Love into your life, and [into your] personal and client healing facilitation. . . . Omni-Love is the *natural structure* of reality. Awareness of Omni-Love is cultivated through *intention* and appropriate use of *personal free will choice* in congruence with the *natural laws* of the *Unified Field Physics of Consciousness and Creation*.⁷⁶

As the electronic equipment utilized in experiments by Rein, McCraty and others showed, rigidity, intolerance, fear, hatred and judgment are counterproductive to the healing process. The experiments also showed that, as Deane states:

Your task is not to seek love, but merely to seek and find all the barriers within yourself that you have built against it.

—Jalal ad-Din Rumi
Persian poet and mystic
(1207–1273)

Judgment and love cannot transmit through the human body at the same time. Judgment creates an *energy reality* of separation or *non-resonant frequencies* of energy, whereas love creates the *co-resonance of frequencies* needed for open flow of universal energies for healing facilitation.

If one can realize that *love is the only constant* and that all conditions of judgment change, it is easier to cultivate the innate ability to fully hold the frequency of love. Though assessment of conditions, actions or attitudes is useful and necessary, such assessment can be rendered through “separating the person from the action.” You can judge the effectiveness or value of the *action or idea* without assigning a value judgment to the *person* to which it is attached.⁷⁷

The principles outlined by Deane are sometimes taught to mental health professionals in training (albeit in another form). However, these concepts appear to be mostly imparted to professionals as a method of treatment (if they’re taught at all)—rather than to the general population as a way to become more self-aware. These concepts could be applied to, and used by, anyone.

It cannot be repeated enough: *Love is a frequency*. We can train ourselves to be more loving, appreciative, and respectful of all life. As we become more coherent—*loving*—we will learn to *be* our own rife machines. Instead of plugging an external device into an electrical socket, we will tap into our innate abilities to heal and be healed.

Self-healing always benefits others. In striving to be the very best of who we can be, we can help the world in positive ways, some of which we haven’t even begun to imagine.

The Buddha of Oakland

Dan Stevenson is neither a Buddhist nor a follower of any organized religion. The . . . resident in Oakland's Eastlake neighborhood was simply feeling hopeful in 2009 when he . . . purchased a 2-foot-high stone Buddha and installed it on a median strip in a residential area . . . He hoped that just maybe his small gesture would bring tranquility to a neighborhood marred by crime: dumping, graffiti, drug dealing, prostitution, robberies, aggravated assault and burglaries.

What happened next was nothing short of stunning. Area residents began to leave offerings at the base of the Buddha: flowers, food, candles. A group of Vietnamese women in prayer robes began to gather at the statue to pray.

And the neighborhood changed. People stopped dumping garbage. They stopped vandalizing walls with graffiti. And the drug dealers stopped using that area to deal. The prostitutes went away. . . .

Since 2012, when worshipers began showing up for daily prayers, overall year-to-date crime has dropped by 82 percent. Robbery reports went from 14 to three, aggravated assaults from five to zero, burglaries from eight to four, narcotics from three to none, and prostitution from three to none. . . .

To this day, every morning at 7, worshipers ring a chime, clang a bell and play soft music as they chant morning prayers. The original statue is now part of an elaborate shrine that includes a wooden structure standing 10 feet tall and holding [more] religious statues, portraits, food and fruit offerings surrounded by incense-scented air. . . . On weekends, the worshipers include more than a dozen people: black folks, white folks, all folks . . . Two weeks ago, a group of German tourists visited the shrine. . . .

Soon after its installation, a would-be thief tried to pry the statue from its perch, but Stevenson had secured him with reinforced iron bar and "\$35 worth" of a powerful epoxy—and Buddha didn't budge. . . . The Buddha has withstood two attempts to remove him from his watch, one criminal and one governmental. Neither has worked. . . .

In 2012, after a resident's complaint, the city's Public Works Department tried to remove the statue but received such passionate blowback from neighbors that city officials decided to table and "study" the issue. Two years later, the administrative effort is long forgotten, and Buddha is still there. . . .

—excerpted from Chip Johnson,
"Buddha seems to bring tranquility
to Oakland neighborhood,"
SF Gate, September 15, 2014

Self-Empowerment Equals Spiritual Maturity

Holism is more than just another, or merely different, system of healing. It's the deepest level of healing. It requires a radical change in one's world view, with a whole-hearted commitment to treating our fellow human beings, the animals and plants with whom we share this planet, and the planet itself, with esteem and appreciation. A holistic approach also means understanding that healing takes place on many different levels: physical, mental, emotional, and spiritual.

Around the time that Royal Rife was seeing living microorganisms through his Universal Microscope, Wilhelm Reich was telling whoever would listen that our natural state as self-regulating organisms is love rather than fear. Love equals expansion and fear equals contraction. Expansion means actualizing our divine needs for love and community. Contraction means feeding hatred and greed. If we lived our lives in resonance with what was truly important—love—would theft, torture, or murder exist? Would genetically engineered organisms or toxic pesticides exist? Would we allow our natural resources to be depleted? Would governments be permitted to suppress solar powered and "free energy" inventions (unless people it liked benefited financially from them)? Would governments have the power to force populations to be medicated against their will? Would people who believe differently from those in power be thrown in jail? Would governments wage war and use biological and nuclear weapons? And would people be taught to hate and fear what they don't understand?

Sometimes in the rush to improve themselves, people grab onto the latest technique or product like just any other consumer item. If we treat holistic healing in this manner, it will become just like mechanized allopathic medicine—dressed in a gentler and prettier package perhaps, but still contaminated by an approach to consumption that is the opposite of holism. Is it not greed, a lack of connection, and a deprivation mentality that made us sick in the first place?

We can't afford to keep doing what we have been doing. People are becoming sicker rather than better. Can we clear any and all emotions that don't resonate with the frequency of love? And are we willing to take the intellectual, emotional, and spiritual risks—each in our own way, of course—to help us return to a healed state? Royal Rife took gargantuan risks. Can we each take one? Think of the quality of life we could have by sustaining a culture that supports health instead of illness, expansion instead of contraction, and life instead of death. Right now, the old paradigm mainstream culture is focused on death. A. Van Beveren writes:

The language we use always shapes our concepts, especially of disease. . . . In this patriarchal, hierarchical era we view the body as a battle field in which an (in)efficient bungling soldier slugs it out with a battalion of powerful, invisible “beasties” and, with the help of our trusty hypodermic, manages to survive all odds. So thick is the arena with military metaphors that we have fostered an attitude that every person is a victim unable to trust Mother Nature, or their own mind-body system and thus their own healing power (spirit). Never mind that the pathogenic role of bacteria, fungi and viruses has been grossly exaggerated by the medical profession. Never mind that these organisms fulfill an important biological duty and we would be unable to complete our biological cycles without their continuous presence. But because we allowed the soil, the terrain to become contaminated with man-made toxins, and opted for a (Feel Better Faster) antibiotic lifestyle, we think we need “immunity.” What we really need is immunity from coercion, immunity from interference and immunity from governmental “education.”⁷⁸

For the average person, education consists of what is hidden as much as what is actually taught. It amazes me sometimes how many people erroneously believe that “energy medicine” is some kind of fictitious voodoo. How ironic that people malign it—but then, our educational system does not teach us about the energetic nature of the universe, unless one studies at advanced universities specializing in quantum physics. All life on this planet grew and developed through exposure to certain wavelengths. Doesn’t it make sense that if we’re out of balance, these life-giving frequencies can help us heal?

Rife Therapy is connected to the many other frequency therapies that we are just beginning to appreciate: homeopathy, visible spectrum color healing, far infrared radiation (FIR) and ultraviolet (UV) treatments, sound, magnetic fields, and more. At this stage in our collective development, it’s folly to deny the abundant fields and energy bodies that comprise who we are.

To truly embrace electromedicine requires a fundamental understanding of the energetic nature of life. Once we grasp that we are not simply a collection of atoms that lose energy and eventually drift off into nothingness, all sorts of possibilities open before us. What may have begun as a belief that we are small and insignificant can transform into a deeply-felt recognition that we are, in fact, magnificent. Instead of feeling helpless, we can become empowered.

Intimacy and Power

Authentic power is being fully engaged in the present moment. It is being creative without limitation. It is enjoying the company of all life. It is caring and being cared for. It is being aware of everything that you are feeling, all of the time. It is living in joy. It is being so powerful that the idea of showing power through the use of force is not even a part of your consciousness. . . . Some individuals . . . see others as threats, opportunities, targets, resources, or the answers to their prayers. [But] . . . Intimacy is not the perception of immediate family, close friends, or dearest relatives as allies, sources of strength, and shelters against the storms that blow. Intimacy is trusting that the Universe will provide what you need, when you need it, and in the manner most appropriate for you. . . .

Intimacy is natural for us. We long to experience intimacy, and we are designed to be intimate—caring, sensitive, and loving toward one another. When you are intimate, you are fulfilled. Every encounter is satisfying, or pregnant with potential for deeper insight and spiritual growth. When you are not caring, sensitive or loving—when intimacy is lacking—nothing fulfills. Every interaction is cold, and sometimes cruel. Vulnerability is dangerous. This is a very painful experience. You feel isolated and alone. You cannot reach others and they cannot reach you. You strive to accomplish activities and achieve goals rather than create relationships. The only relationships you seek are functional—those that help you obtain what you desire. . . . Intimacy and the pursuit of external power—the ability to manipulate and control—are incompatible. Where one exists the other cannot exist. Lack of intimacy and the pursuit of authentic power . . . are also mutually exclusive. When you naturally create harmony, cooperation, sharing, and reverence for Life, you cannot suffer from lack of intimacy.

The pursuit of external power . . . creates only violence and destruction. Honoring the preferences of others creates harmony, sharing, and cooperation. It reveres Life. . . .

Faster aircraft, space colonies, the internet, and increased agricultural efficiency have no power to make us compassionate and wise. Neither do larger homes or more cars. Compassion and wisdom are the products of spiritual growth. They cannot be centrally planned, mass-produced, or globally distributed. They do not depend upon economies of scale, advertising, and cheap labor. They are not matters of policy but of personal intention. . . .

—excerpted from *The Heart of the Soul*
by Gary Zukav and Linda Francis (2001)

From the day we are born, we are put into school for a couple of decades and told, not taught, how the world works, what path to take, why to follow it, and how to fit in and become a “productive” member of society. This basically means we have to spend a large majority of our lives . . . to qualify to work long hours and subsequently earn the right to live. . . . No matter how little sleep we get or what problems we are having at home, mental blockages and other things that can arise during the human experience, we are and always have been told that we must be at work on time, ready to go without excuses. . . . [However,] food, clothing, shelter and more should not require little pieces of paper along with a bits of our soul to receive it . . . [As Josh Jones writes,] “Why must only the wealthy have access to leisure, aesthetic pleasure, self-actualization?” . . .

All of us are simply working for a small group of elite people that, through the corporations they run, basically control almost all aspects of our lives. Their idea of “globalisation” or a “New World Order” is one that requires our participation, and our consent. This type of system, one in which basically all of us are economic slaves, is one that we’ve become accustomed to. . . . [Moreover,] we’ve remained complacent, and simply accepted the human experience for what it is . . .

While we blindly continue to follow others, the world has experienced something it has never really experienced before. A massive paradigm shift is happening, a shift in the way we view, feel, and perceive our world and the current human experience. . . .

Something new needs to be created, a new way of life . . . Just imagine, if human beings created an experience where all of our needs were provided for. . . . What would we do with our time? It’s simple, we would explore, contemplate and discover. After all, that’s our natural state from birth, until we are told how the world works and what we are to do in it. . . . It’s really time to create a human experience that resonates with all of us, and what we and all life are meant to do, and that’s thrive. . . . There are so many wonderful creations and ideas out there that make a utopian society possible, it’s so simple that most people have a hard time believing it. . . .

[Buckminster] Fuller said: “You never change things by fighting the existing reality. To change something, build a new model that makes the existing model obsolete.”

—excerpted from Arjun Walia

“Why We Were Born To Do More Than Just Fit Into the System, Go to School, Work, Pay Bills and Die”

Collective Evolution, May 31, 2018

I see humanity precariously wavering between two paths. One path is that of the dominator paradigm. It promotes a soulless, mechanized view of the universe, which encourages hatred, mistrust, fear, and repression. Its health care model is allopathic medicine, which is disrespectful and rigid. Allopathic medicine sees people as a bunch of fragmented parts, and it uses drugs and surgery to mask symptoms and numb the body. This doesn’t address or repair underlying problems, but merely unbalances the body even more.

The other path is that of the connection paradigm. It promotes a spiritual view of the universe, which encourages love, creativity, joy, and expression. Its health care model is holism, which is respectful and flexible. Holistic healing recognizes that people are comprised of complex, interlinked energies and systems, and it uses substances and energy patterns that support, nourish, and awaken. Holistic methods also emphasize frequency therapies that employ both externally created devices and the healing that we generate from within our own bodies, minds, hearts, and spirits.

Whichever frequency therapy we choose—whether it’s ancient, new, or has yet to be discovered—by selecting a modality that resonates with who we really are, our structural integrity will remain intact rather than become dis-integrated. We are not integrated when the methods we use are invasive and unloving. The modality with the greatest potential for true healing seems obvious. We *can* choose it!

Throughout my life, I have done my best to act wisely. When I make mistakes, I try to forgive myself and learn from those mistakes so that I can make better choices in the future. My purpose for writing this book is to help you make better choices too. What we think and feel, and how we act, can make the difference between illness and wellness, fear and love, showing the worst of ourselves or living life with divine freedom and grace.

We are intricately connected to each other, in deeper ways than perhaps many of us ever dreamed. The choices that we make as individuals affect us all. May we all choose wisely. For everyone’s sake.

APPENDIX A

Resources

Most people live, whether physically, intellectually or morally, in a very restricted circle of their potential being. They make use of a very small portion of their possible consciousness, and of their soul's resources in general, much like a man who, out of his whole bodily organism, should get into a habit of using and moving only his little finger. Great emergencies and crises show us how much greater our vital resources are than we had supposed.

—WILLIAM JAMES, AMERICAN PHILOSOPHER,
PSYCHOLOGIST AND WRITER (1842–1910)

Unless otherwise specified, all addresses are in the United States.

AIR PURIFICATION

Plant Air Purifier®
138 Maple Hill Drive
Kingston, New York 12401
phone: 855-247-9900
website: plantairpurifier.com

Based on research of NASA scientist Dr. B.C. Wolverton, the Plant Air Purifier® uses a common houseplant—along with a small, built-in electric fan in a specially equipped planter—to purify indoor air. The system includes activated carbon (to attract toxin particles from the air) and washed ceramic media (instead of soil) to hold the plant. While microorganisms naturally living on plant roots consume toxins and convert them into nutrients for the plant, the fan circulates air through the roots and into the room. This ingenious system cleans up to 100 times more air than a regular plant, and requires only water and occasional plant food.

BODY-MIND THERAPIES

Emotional Freedom Techniques (EFT™)
website: emofree.com

Whenever physical or emotional trauma occurs, our acupuncture meridians become unbalanced, which can lead to mental and physical health problems. EFT™, developed by engineer Gary Craig, is used to manage the effects of abuse, restoring the integrity of the short-circuited meridians without drugs or equipment. It alleviates or eliminates entirely: addictive cravings, anxiety, depression, fears, grief and phobias, as well as physical pain, breathing difficulties, headaches and overweight. EFT™ (also known as “tapping”) is self-administered and easily learned. It's effective for children, adults and even animals, with a clinical effectiveness of over 80%. Mr. Craig's website offers a free, downloadable EFT™ manual. Other people who learned EFT™ from Craig have created modalities that resemble EFT™, but Craig's method of teaching may yield the safest and most comprehensive results. Mr. Craig also offers an EFT™ practitioner certification course.

CANCER TREATMENTS, HOLISTIC

These groups provide information on alternatives to surgery, chemo and radiation for all types of cancer. They may also refer speakers, hold events, offer recommendations to doctors and clinics, and/or provide customized cancer protocols.

Cancer Control Society
2043 North Berendo Street
Los Angeles, California 90027
contact: Lorraine Rosenthal
phone: 323-663-7801

COLOR THERAPY

Dinshah Health Society (Spectro-Chrome) PO Box 707

Malaga, New Jersey 08328

contact: Darius Dinshah, president

phone: 856-692-4686

website: dinshahhealth.org

For Spectro-Chrome Color Therapy, transparent plastic sheets imbued with specific colors are placed on bare skin (see Chapter 3). Included in membership are DVD, newsletters, and protocol manual explaining where to obtain the correct frequency color transparencies and how to do the therapy. Do an Internet search for "Roscolene Filters" for authorized dealers who sell larger size sheets that cover the entire body.

Irlen Institute 5380 East Village Road Long Beach, California 90808

phone: 800-55-IRLEN (toll-free)

562-496-2550 (local and international)

website: irlen.com

The Irlen Method was devised to help with reading problems, headaches, light sensitivity, autism, ADD / ADHD, dyslexia, and other conditions by addressing the brain's inability to process visual information. Special colored transparent overlays, called "Irlen Spectral Filters" or "Irlen Lenses," help correct the visual processing centers of the brain. Website contains a list of specialists all over the world as well as the color transparencies for purchase. Note: the color filters sold here are *not* the same as those from Spectro-Chrome. They are completely different systems!

DETOXIFICATION

PureBeing, Inc. 11015-9 Olson Drive Rancho Cordova, California 95670

contact: Daniel Root, CEO & Senior Detoxinician

phone: 916-366-0999

website: getdetoxinated.com

Based on a protocol further developed by distinguished medical doctor David Root, this is without question the fastest, and perhaps safest, method of eliminating toxic metals, noxious chemicals, and even drug residues from the body. The protocol requires the ingestion of niacin and other nutritional supplements, along with polyunsaturated oils, combined with exercise (or a substitute) to get the circulation moving, and sauna therapy. Clients report enormous benefits after only two weeks.

ELECTROMEDICINE THERAPIES (not Rife), equipment that runs on electrical power

Quantum Energetics (Biofeedback)

I.M.A.E.T.
5631 W. Genesee Street
Camillus, New York 13031
contact: Bernard Straile, DC
phone: 315-430-4211
website: imaet.com

The I.M.A.E.T. consists of software, a harness that attaches to the body, and other accessories for additional contact. The computerized database contains thousands of frequencies for allergens, emotional stressors, diseases, microbes, nutrients, herbs, meridians, homeopathic and Ayurvedic remedies, the spine, organs, glands, and much more. The practitioner makes corrections using the energy signatures of selected items in the database, allowing the unit to communicate with the subject on a quantum level. The machine can also work via subspace.

Pulsed Technologies Romania
phone, global (inquiries, sales, technical):
+40-722-643-640
websites: pulsedtech.com
pulsedtechresearch.com

The VitaSet Generator (VSG) emits all five of the Schumann Resonances of the Earth’s magnetic field. Humans and animals evolved to the Schumann Resonances, which are essential for proper DNA signaling and many metabolic processes. However, abnormally high, competing, concentrated electrical stimulation—from high voltage power lines to WiFi—interfere with the body’s ability to tap into, and be nourished by, the natural frequencies of the Earth. In fact, in most places these resonances are virtually non-existent due to the invasion of millions of harmful EM fields all around us. The VSG’s emissions, restoring what is not easily available to us, helps normalize the body’s biological functions and help heal.

L.I.F.E. App

website: <https://app.cell-wellbeing.com/EZwater>

Used similarly to the Hydration App (page 905), the photonic frequencies used by the L.I.F.E. App are designed to help the body protect itself against electrosmog.

Websites (Informational)

magdahavas.com (general public)

magdahavas.org (academic)

phone: 705-748-1011, ext. 7882

Magda Havas, PhD, is a leading authority on the dangers of electrosmog that's produced by cell phones, WiFi, motors, wind turbines, power lines, antennas, and electrical towers. Her websites contain information on health issues, links to EMF organizations, products, and more.

www.powerwatch.org.uk

This non-profit independent organization, which has been researching the effects of EMFs for over two decades, promotes policies for a safer environment and provides a wealth of information on its website.

ENERGY and TECHNOLOGY INFO

Borderland Sciences

PO Box 6250

Eureka, California 95502

phone: 707-497-6911

website: borderlandsciences.org

Sells videos, books and other materials on science, medicine and futuristic technology, including the contributions of Nikola Tesla and Royal Raymond Rife.

Institute of HeartMath

14700 West Park Avenue

Boulder Creek, California 95006

phone: 800-711-6221 (toll-free)

831-338-8500 (local and international)

website: heartmath.org

Engaging and synchronizing the heart and brain rhythms causes neural and biochemical shifts that reverse stress, boost cognition, and encourage vitality and performance. The Institute also conducts research on the relationship between people and the Earth's magnetic fields and other aspects of the natural world. The techniques—scientifically validated to reduce anger, anxiety, depression, hostility and risky behavior, and to accelerate learning, optimal performance and positive social behaviors—are used globally in private homes, universities, hospitals, businesses, government institutions, prisons, the military, and schools.

**International Society for the Study of Subtle
Energies and Energy Medicine (ISSSEEM)**
PO Box 297

Bolivar, Missouri 65613

phone: 888-272-6109

website: issseem.org

International, non-profit interdisciplinary organization dedicated to exploring and applying subtle energies pertaining to consciousness, healing, and human potential. Bridges many disciplines including quantum physics and psychology. Sponsors conferences, seminars, and workshops. Publishes *Bridges*, a quarterly magazine, and *Subtle Energies & Energy Medicine*, a peer-reviewed, scientific journal.

**HEALTH / FOOD / NUTRITION / CHEMICALS
INFORMATION and POLITICAL ACTION**

Alliance for Natural Health (United States)

website: www.anh-usa.org

Alliance for Natural Health

(outside the United States)

website: anhinternational.org

This outstanding organization provides education on the dangers of pharmaceuticals, EMF and environmental pollution, genetically modified organisms, fluoride, etc. For a long time, ANH has initiated legal action against governmental agencies, corporations and individuals to protect the right of natural health providers to practice, to allow consumers to choose their own health care, and to protect our access to nutritional supplements.

America's Frontline Doctors

websites: americasfrontlinedocs.com

americasfrontlinedoctors.org/treatments

The first website, founded by noted doctor Simone Gold, contains references and articles that address the misinformation on Covid-19 that is peddled by mainstream media. The second, companion site discusses how hydroxychloroquine, ivermectin and budesonide (relatively safe pharmaceuticals), along with some natural substances, can be used to cure Covid-19, with links to doctors who can prescribe the pharmaceuticals.

Brix

website: biomedx.com/education/index.html

Educates about many important topics including BRIX foods, and provides information on how to obtain BRIX materials, including refractometers.

Buhner Healing Lyme

website: buhnerhealinglyme.com

Award-winning author of over twenty books on herbal medicine, Stephen Harrod Buhner's comprehensive educational website is one of the most valuable resources for people with Lyme and co-infections.

Cancer Tutor Library

website: cancertutor.com

Books, eBooks, courses, and videos.

Dr. Joseph Mercola

website: mercola.com

Comprehensive and popular holistic health site.

Dr. Mathias Rath

website: dr-rath-foundation.org

Dedicated to protecting the right to choose one's health care. Articles on natural health in 17 languages.

Fluoride Action Network (FAN)

website: fluoridealert.org

Current information on fluoride toxicity. Monitors actions that impact the public's exposure to fluoride.

Green Medicine Info

website: greenmedinfo.com

Sayer Ji's groundbreaking site contains accessible and interesting information not found elsewhere. This is a must for both serious researchers and the general public.

Lifesite News

website: lifesitenews.com/

Presents cutting-edge research, news, videos and opinion pieces concerning health and medical politics that are distinctly in opposition to mainstream medicine and the political status quo. The petitions it offers have a decidedly Christian orientation.

National Health Federation

website: thenhf.com

A grassroots organization working to guarantee your right to use the doctor, nutrition, or therapy of your choice.

Natural Health News

website: naturalnews.com

Cutting-edge information related to health and health politics, founded by Mike Adams. TruthWiki was created to counteract the medical propaganda on Wikipedia.

Organic Consumers Association

6771 South Silver Hill Drive

Finland, Minnesota 55603

phone: 218-226-4164

website: organicconsumers.org

Public interest, grassroots organization promotes worldwide food safety, organic farming and sustainable agriculture. Addresses food adulteration of all kinds, including genetic engineering. Promotes honest food labeling, USDA food standards and more, through education, activism, boycotts, lobbying, media relations and litigation.

Pesticide Action Network North America

2000 Allston Way, PO Box 521

Berkeley, California 94704

phone: 510-788-9020

website: panna.org

Provides information on chemicals, agriculture, food, and alternatives to pesticides, conducts political actions (including lawsuits), and offers petitions.

Price-Pottenger Nutrition Foundation

7890 Broadway

Lemon Grove, California 91945

phone: 800-366-3748 (toll-free)

619-462-7600 (local and international)

website: price-pottenger.org

Based on the work of Weston Price and Frances Pottenger, provides information on healthy lifestyle, ecology, nutrition, alternative medicine, farming, and organic gardening.

www.StephanieSeneff.Net

MIT Senior Research Scientist Stephanie Seneff, PhD, specializes in the effects of glyphosate and how it destroys the health of humans, animals, and the environment.

Truth in Labeling Campaign

website: truthinlabeling.org

Information on MSG, artificial sweeteners, food coloring, and related issues.

The Weston A. Price Foundation

PMB 106-380

4200 Wisconsin Avenue, NW

Washington, DC 20016

phone: 202-363-4394

website: westonaprice.org

Disseminates the work of Weston A. Price, who documented native diets that prevent tooth decay and maintain health. Publishes an outstanding journal and other literature on food and healing.

FREQUENCY DATABASES

CAFL

website: electroherbalism.com/Bioelectronics/FrequenciesandAnecdotes/CAFL.htm

FREX

website: rife.de/frex-frequency_database.html

Free interactive downloadable database available from Australian rife and massage therapist Ken Uzzell. Upgrade for a very modest fee. This system is used worldwide with speakers, headphones, electrodes and even plasma tubes.

HOLISTIC MEDICINE *and* DENTISTRY: PRACTITIONER DATABASES & EDUCATION

These organizations provide educational materials and databases of practitioners. Some may offer conferences and review courses for professionals, and monitor legislation relevant to practitioners.

MEDITATION

Natural Stress Relief®

natural-stress-relief.com

“How to Create Your Own Mantra and Learn to Meditate”

nenahsilver.com/how-to-meditate.html

This download offers, for free, the principles and “how to” instructions of a famous mantra-based course that costs many hundreds of dollars.

MICROSCOPES

Grayfield Optical Inc.

Freiburger Str. 17

50859 Cologne

Germany

phone: UK +44 20 8133 4321

Europe +49 221 20046970

United States 702-425-7775

website: grayfieldoptical.com

Ergonom microscopes have a higher resolution ability and greater depth of field than even Rife's best microscope (while being much easier to use). All Grayfield instruments feature variable depth of field—independent of magnification—as well as extended working distance and full contrast in true color, without any need for staining or oil-immersion. These features allow for the observation of living organisms.

NUTRITIONAL SUPPLEMENTS (*unique or hard to find*)

Aloe

IED Limited

222 SW 2nd Street, Suite 203

Grand Prairie, Texas 75051

phone: 972-262-1446

This company, operated by the son-in-law of Dr. Ivan Danof—the “Father of Aloe” (see Chapter 1)—formulates and distributes high quality aloe vera products made from the inner leaf only. Practitioners may purchase wholesale.

Clay

Jason Eyton's Clay Website

eytonsearth.org

Comprehensive, one-of-a-kind website explores the world of natural healing clays, pelotherapy, and balneology. Information, accounts of recoveries, and instructions on how to use clays of many types: illite, bentonite, montmorillonite, terramin. Information, forum, and excellent quality clays (powder and rehydrated) available for purchase.

Essential Oils

New Directions Aromatics

newdirectionsaromatics.com

Essential oils are becoming big business as the world discovers their healing and uplifting properties. Many businesses (especially multilevel marketing companies) claim that their oils are the best, especially if they're organic; but the organic market worldwide is supplied by only a few sources, so don't rely on brand name hype. It's also less expensive to buy in bulk and make your own blends.

Pine Oil (Naturally Derived Turpentine)

Diamond G Forest Products, LLC

Patterson, Georgia 31557

phone: 912-647-7463

website: diamondgforestproducts.com

Pure gum spirits of turpentine is a powerful essential oil made from pine tree sap—not at all the same product as the chemically synthesized turpentine used to clean artists' brushes. The pine oil is sold as a clear essence, as pine gum rosin, and in soap. See Chapter 1 for more information on the history and therapeutic uses of real turpentine.

Salt

Consolidated Midland Corporation (CMC)

20 Main Street

Brewster, New York 10509

phone: 845-279-6108

The 1-gram sodium chloride USP tablets should be ordered through your local pharmacy. Although not a prescription drug, salt tablets are not usually stocked, and must be special ordered. The NDC number of the CMC salt pills is 0223-1760-01.

Celtic Sea Salt

United States

phone: 800-867-7258 (toll-free, US)

website: elinanaturally.com

The source of several grades of high-quality sea salt with all its minerals intact, gathered off the French coast on government protected lands. Celtic salt is also sold in many natural grocery stores around the world.

Vitamin-Mineral Supplement

VitalMinz

website: healthvitalminz.com

phone: 605-453-2777

There are so many vitamin and mineral supplements on the market today that not only the average consumer, but even seasoned health professionals often feel overwhelmed by the choice and variety. With very few exceptions, nutritional supplements contain additives, fillers and allergens. Even the majority of presumably high quality products marketed to health professionals contain ingredients I would never ingest. Also, people who are ill or over 40 years of age absorb only a fraction of what tablets or capsules offer, so the benefits of taking solid supplements are decreased and money is wasted. VitalMinz liquid supplement is unique in several ways. It's a complete supplement, containing all vitamins and minerals (including trace minerals). All of the nutrients are "cell ready"—which means either in ionic or liposomal form, which makes this supplement 100% absorbable the moment it reaches your mouth. Furthermore, there are no fillers (including useless sugar-rich fruit juices) that most other liquid supplements contain. This means that the daily suggested amount is only one tablespoon. Some people take even less when they feel themselves start to detox. The liquid can be taken straight or diluted in a beverage. People report experiencing a steady energy that gets them through the day, a lessening of aches and pains, and an overall feeling of improved well-being.

Water

Willard's Water

website: willardswater.com

phone: 800-447-4793 (toll-free, US)

Catalyst Altered Water (CAW), developed in the 1960s by chemist John Willard Sr., is an alkaline water containing several added minerals and sulfated castor oil, and which is imbued with an electrical charge. When added to ordinary water, CAW changes the structure of all the surrounding molecules, making the fluid "wetter." Ingested, the new water catalyzes and enhances the body's own processes, including its ability to absorb nutrients. Used externally, the water heals wounds. It also helps plants grow faster. CAW had 21 patents. Some of them pertained to treating damaged and infected tissue, relieving stress and shock, reducing infectious disease and even lessening anti-social behavior in humans and animals. Just a few are: "Method of Reducing the Incidence of Infectious Diseases and Relieving Stress in Livestock"; "The Incidence of Infectious Disease in Poultry is Reduced and/or Anti-Social Behavior (Cannibalism) is Reduced"; and "Therapeutically Treating Damaged and/or Infected Tissue in Warm Blooded Animals and Relieving Stress and Shock in Warm Blooded Animals." Be aware that some companies sell an adulterated diluted version, which doesn't possess the beneficial properties of the original formula. To obtain the exact recipe that Dr. Willard created, buy from the above site.

PAIN PATCHES, FREQUENCY-INFUSED (energy, non-electrical)

See Appendix C, "Healing with Electromedicine and Sound Therapies," for details on this non-pharmaceutical modality.

Tuning Element™

1440 State Highway 248, Suite Q, BOX 435

Branson, Missouri 65616

contact: Sean Martinez, founder and director

phone: 417-973-0000

website: tunedpatch.com

PERSONAL CARE and HOUSEHOLD CLEANING PRODUCTS

See Appendix F on dangerous chemicals and Appendix G on safe substitutes and how to use Enviro-One for many types of cleaning.

Enviro-One

contact: Allen Victor

phone: 800-953-2630 (toll-free, US and Canada)

website: enviro-one.com

This colloidal micelle soap—specially formulated for the chemically sensitive and immune-compromised—is non-toxic, biodegradable, hypoallergenic, non-fuming, non-reactive, fragrance free; and it doesn't leave any residue on the skin. Ingredients: fatty acids, vegetable- and plant-based enzymes and minerals, organic alcohol, coconut oil, folic acid, vanilla, and purified water. There's no risk of chemical reaction with other ingredients because it works mechanically (due to its molecular shape and electrical charge). This fluid will clean any washable material: metal, plastic, fabric, wood, tile, glass, concrete, even foods—and yes, humans and animals too. It's sold in concentrate form, so you don't pay for shipping water (different dilutions perform different functions). It disables bacteria, viruses and fungi, so it has many applications, depending on the dilution used. This can be used as a shampoo for lice; and farmers and gardeners are even using it to repel harmful insect pests (note that it doesn't harm beneficial ones such as ladybugs). Private labeling is offered.

RIFE-RELATED MEDIA (BOOKS, DVDs)

BioMed Publishing Group

PO Box 550531

South Lake Tahoe, California 96155

phone: 530-573-0190

website: lymebook.com

This publishing company offers a wide range of unique health-related books and DVDs. Topics range from Lyme and mold-related illness to autonomic response testing and amalgams. Bryan Rosner's very informative books—including *Lyme Disease and Rife Machines*, *The Top 10 Lyme Disease Treatments*, and his newest, *Freedom From Lyme Disease*—are also available. Recommended by laypersons and practitioners.

CAFL

website: electroherbalism.com/Bioelectronics/FrequenciesandAnecdotes/CAFL.htm

Internet-based Consolidated Annotated Frequency List (CAFL) from United States rife Brian McInturff.

Film: "Symbiosis or Parasitism"

website: grayfieldoptical.com/symbiosis-or-parasitism.html

German naturopath Bernhard Muschlien, in conjunction with Kurt Olbrich, inventor of the Ergonom microscope, has created this film that shows the pleomorphic nature of some microorganisms. This site also has many articles, all free.

KE Enterprise

phone: 866-757-9375 (toll free, North America)

website: rifevideos.com

"The Royal Rife Story" is an in-depth look at the life and inventions of Rife, including old footage of Rife's 1936 lab and accounts of bacteriological discoveries in Rife's own voice. "Royal Rife—In His Own Words" was made from an hour-long audio recording by Rife in the 1950's, in response to requests by colleagues to explain his work in bacteriology and how he found the cancer virus.

Rife Frequency Therapy, Electromedicine, and Holistic Health: a comprehensive course for both laypersons and practitioners

website: nenahsilver.com

This 14-hour DVD set of the 2016 Phoenix, Arizona conference is a complete in-depth course. Includes the history and principles of Rife Therapy; how to administer rife sessions; complementary modalities; special protocols

for dealing with Lyme, co-infections and *Candida*; electromedicine technicals and terms (to avoid being misled by false claims by equipment manufacturers); sauna therapy and other electromedical devices; advances in cellular research; and the bioelectrical properties of cells. Featured speakers are Nenah Sylver, PhD; neurologist and clinical nutritionist Steve Haltiwanger, MD, CCN; scientist Jimmie Holman of Pulsed Technologies (the US and Romania); Edna Tunney of Resonant Light Technology (Canada); and Paddy McAlister of Magnetex (the US). The device manufacturers discuss their equipment, and there are Q&A sessions on both days. Also, Dr. Steve Haltiwanger demonstrates muscle testing (kinesiology) and Nenah Sylver leads an exercise on how to tune in more accurately to your body.

RIFE FREQUENCY EQUIPMENT

BCX Ultra

Subtle Light & Sound Technology United States

contact: Roger Whitman

phone: 530-623-1935

Transmits frequencies via hand-held gas-filled tubes with 45 KHz RF carrier wave, hand-held metal electrodes and foot plates, a coiled freestanding plasma tube, or LEDs. Functions include customizable gate, duty cycle, and varied waveforms. In addition to 1236 preprogrammed channels, up to 255 frequencies can be manually programmed. Frequency range is up to 100,000 Hz. Warrantee and 30–60 day buy-back guarantee. The manufacturer does not maintain a website, instead preferring that customers do an Internet search for distributors. For your search, use the phrase "BXC Ultra."

BioWave 77 and BioWave 21 LCD

Bio Frequenz-Center Pfarrer-Bodden-Str. 20 50181 Bedburg Germany

contact: Peter Schmalzl

phone: + 49-02272-90 51 58

website: bio-frequenz-center.de

These devices, certified in Europe for medical use, have a frequency range of 1 Hz–1 MHz. The professional BioWave 77 for therapists can be programmed with up to 30 frequencies—either manually, or from database chip cards containing frequencies taken from the databases of Royal Rife, Hulda Clark, and others. Master chip cards can store individual programs that can be used either on this

equipment or on the BioWave 21 LCD. The BioWave 21 LCD, which is for home use, can run pre-programmed chip cards for many conditions—as well as the master chip cards that have been programmed on the BioWave 77. Note that as of this writing, the names of the equipment might have changed. The company may be undergoing restructuring and other companies may also be selling this or similar units; so periodically do an Internet search.

EM+ Resonant Radiant Plasma Systems

Bruce K. Stenulson

PO Box 69

Fairplay, Colorado 80440

phone: 719-836-2489

website: stenulson.net/althealth

Plasma systems with selectable power output levels that can run multiple plasma tubes. Most EM+ systems have both an internal frequency generator and the ability to interface with a wide variety of frequency generating software or external frequency synthesizers. Also sells colloidal silver making accessories, pulsed magnetic research equipment, and a two-chamber footbath system utilizing nontoxic carbon electrodes and resonant frequencies.

F-Scan

TB-Electronics GmbH (Europe / World)

Bahnhofstrasse 3

CH-9443 Widnau

Switzerland

contact: info@fscan.com

phone: +41 71 7225255

website: fscan.com

Health Balances (North and South America)

10814 206th Street E

Graham, Washington 98338

contact: Richard Loyd, PhD

phone: 206-883-1900

website: royalrife.com

There are two sizes: the portable F-Scan 2 and the even smaller Compact (which comes in two models and will fit in a pocket). The F-Scan 2, which ranges from 1 Hz to 15 MHz, can be controlled by a computer using the included software, or it can be used by itself. It can transmit frequencies via electrodes or for radiant plasma devices. In the DIRP mode, it scans the body for pathogen frequencies and then applies them. The Compact model with DIRP capabilities scans from 80,000 Hz to 560,000 Hz. Both Compacts can produce frequencies of up to 5 million Hz. All F-Scan units produce sine, square, and pulsed DC waves (like a zipper).

GB-4000

AAA Production Inc.

PO Box 277

Moroni, Utah 84646

phone: 888-486-4420 (toll free, North America)
435-436-5235

website: gbgenerators.com

GB-4000 reaches up to 20 MHz, has a 2.4 MHz carrier frequency, and can output up to eight frequencies simultaneously to 40,000 Hz on its programmable channels. It does regular sweeps, converge sweeps and gating, and runs sine and square waves. One year parts and labor warranty. The manufacturers regard the GB-4000 as test equipment, and make no medical claims for the device. The M.O.P.A. plasma tube is sold by a separate company. Some customers who purchased the plasma unit reported having to sign a disclaimer that absolves the manufacturer of liability if the radio frequency carrier wave interferes with TVs and other electrical equipment within a certain radius.

Life Frequencies

BZtronics

Salt Lake City and Las Vegas, Nevada

phone: 801-738-3490

website: bztronics.com

The owner's foundation in software design, together with an interest in health, led him to develop a different type of frequency conveyance: sound, using headphones and speakers. The software can be downloaded instantly, and is less expensive than more conventional "rife" equipment.

PERL M+

Resonant Light Technology Inc.

4875 North Island Highway

Courtenay, British Columbia V9N 5Y9

Canada

contact: Edna Tunney

phone: 877-338-4949 (toll-free)

250-338-4949 (local and international)

website: resonantlight.com

The PERL M+, about 12 pounds and 12.5" x 5.5" x 17.5", is equipped with a glass tube filled with 100% argon gas. It emits frequencies (up to four signals simultaneously) over a 27.125 MHz carrier. Frequency selection is from 1.000 Hz to 3,100,000 Hz. The selectable waveform (square, sine, or triangle) has a range of up to 30 feet. The customer can either program frequencies into the unit or use one of over 2,000 sets of pre-programmed protocols. It comes with the ProGen 3, which drives the unit and has over eight thousand channels. Optional accessories include contact electrodes and LEDs.

PFG 2Z (Precision Function Generator) and P3 (Precision Pulsed Plasma) Equipment

websites: pulsedtech.com
pulsedtechresearch.com

PFG Series 2 machines emit complex waveforms via company supplied software and a user supplied personal computer. PFG2 units operate with either electrodes or plasma tubes. P3 tube units are controlled by the PFG series generators. Optional accessories, such as an immersible electrode and colloidal silver attachment, are also available. Software for all equipment can import frequencies from other sources.

RIFE FREQUENCY FINDING and CUSTOM PROGRAM SERVICES

For frequencies that are not in this book, consult a source below. Ms. Boehm earned a patent for her unique proprietary system of frequency calculation. Dr. Sutherland calculates frequencies and works remotely with clients. Dr. Monahan works with clients in person and remotely, and finds and uses frequencies as needed.

RIFE WEBSITES and INTERNET SUPPORT GROUPS

There are dozens of websites devoted to Royal Rife and modern-day devices inspired by his original Beam Ray. Some of the groups focus on particular health issues. Below are some of the most popular sites.

Rife Research, Europe
website: rife.de
webmaster: Peter Walker

www.rifeforum.com
webmaster: Peter Walker

Huge website of historical documents, photos, and its own discussion forum on the latest Rife studies from researchers and organizations, many based in Europe. Research includes a scientific placebo study on the use of a Rife pad device to treat arthritis. Information is constantly being added to this site, so view it often.

www.rife.org
webmaster: Stanley Truman, Jr.

The most complete known collection of Rife historical records: scientific papers; letters to and from Rife; newspaper, magazine and journal articles; Rife's lab notes; photos of Rife, his wife, colleagues and lab equipment; slides of specimens seen through the Universal Microscope.

<https://groups.rifeforum.com/>
webmaster: Peter Walker

Peter Walker, who over the course of two decades has been responsible almost single-handedly for building and maintaining the Rife Research community, hosts an enormous amount of information and various rife- and health-related groups on his server. Below are just some of the groups he hosts. See the main group, the Rife Forum, for a complete list with links to join the other groups.

<https://groups.rifeforum.com/electroherbalism.php>

https://groups.rifeforum.com/lyme_rife.php

<https://groups.rifeforum.com/rife.php>

<https://groups.rifeforum.com/rifeforum.php>

<https://groups.rifeforum.com/rifers.php>

<https://groups.rifeforum.com/rife-list.php>

SAUNAS

For detailed information on body heating and the benefits of sauna therapy, see *The Holistic Handbook of Sauna Therapy* by Nenah Sylver.

Arrowhead Health Works

PO Box 3668

Crestline, California 92325

contact: Carolyn Bormann, ND, owner & director

phone: 909-338-3533

website: arrowheadhealthworks.com

This health center sells the Bio-Spectra™ Far Infrared ozone-compatible, portable carbon dome dry sauna with Clean Power Technology™. In this sauna cabinet, the person lies down. There are no toxic glues or adhesives used in the construction of the sauna. The wiring is shielded to neutralize any harmful electrosmog that normally might be emitted by the heater. The sauna can also be equipped with LEDs, a negative ion generator, and/or PEMF (pulsed electromagnetic field) mat options.

Clearlight Far Infrared Sauna Technology, Co.

1077 Eastshore Highway

Berkeley, California 94710

phone: 800-798-1779 (toll-free)

510-601-1775 (local and international)

website: infraredsauna.com

All far infrared saunas are made according to the specifications of chiropractor Raleigh Duncan. No toxic glues or adhesives are used in the construction of the saunas. Cedar wood, which is naturally antifungal and antibacterial, can be used for the saunas; but for people who are allergic to or intolerant of the aromatic compounds in cedar, other hypoallergenic options such as basswood are available. The heaters are made of both carbon and ceramic, and emit many different wavelengths to ensure penetration of heat into the body. Most important, cancellation of harmful electromagnetic fields is accomplished in the following ways: The electrical wires run through metal conduit; the wires are twisted; all electronics are protected with foil shielding; and carbonized fishnet mesh covers the heaters for extra grounding and neutralization of the electrosmog.

SAUNA - NIACIN THERAPY PROTOCOL

PureBeing, Inc.

11015-9 Olson Drive

Rancho Cordova, California 95670

contact: Daniel Root, CEO & Senior Detoxinician

phone: 916-366-0999

website: getdetoxinated.com

Sweating out toxins, in conjunction with niacin which releases debris from the fat cells, the sauna-niacin protocol is probably the fastest—and safest—method of eliminating toxic metals, noxious chemicals, and even drug residues from the body. Along with daily sauna sessions, the protocol requires the ingestion of niacin (in increasing 100-mg amounts, either every day or every few days), along with polyunsaturated oils and activated charcoal, combined with exercise (or a substitute) to get the circulation moving. Supplementation with all vitamins and minerals (to replace electrolytes lost through sweating) is also mandatory. Many people report enormous benefits after only two weeks. Dan Root also offers long-distance coaching. If you have a sauna in your home, you can do the protocol.

TRANSCRANIAL DIRECT CURRENT STIMULATION (TDCS)

This deceptively simple (and gentle) Pulsed Technologies brain stimulation apparatus is applied with barely perceived electrodes. It's used to facilitate or inhibit neural activity in different portions of the brain, thus affecting a variety of behaviors, perceptions and brain processes. Improvements include: better memory; the ability to plan, make decisions and be motivated; better motor skills and learning (which includes math, music and other creative abilities); more focused attention; and insight. Athletes, musicians, artists, academicians, and people with Alzheimer's and Parkinson's use tDCS. Depending on where the electrodes are placed, this equipment also addresses pain management, depression, unwise risk-taking behavior (impulse control), and cravings. It is used for fibromyalgia, learning disabilities, migraines, insomnia, emotional problems, and even strokes. The company issues an enormous workbook, with hundreds of scientific references, that shows electrode placement and explains how and why the technology works.

For Pulsed Technologies contact information, see page 908.

I am writing to you on behalf of myself and my 6-month-old son. Up until about one week ago, we were completely and totally misinformed on the topic of vaccinations. Being a 21-year-old first time mom, I unfortunately was easily persuaded into vaccinating my healthy, 8 lb. 9 oz. son, once at birth, then again at two months, and again at four months. I was never once informed of any of the risks or negative outcomes of these shots, presumably because I am fairly young and the doctors see me as vulnerable and uneducated. I can only thank God above for protecting my son from the poisons that were injected into his clean, healthy body.

It literally makes me sick to think of how these medical "professionals" whisked my son away at the hospital when he was only one day old to give him his first dose of the hepatitis B vaccine. A short while later, he was then taken to have his heel pricked for a blood sample, and all the while the nurses falsely informed me it was California state law and that it was required for them to do so (absolutely not true), thus taking advantage of an innocent newborn and an exhausted, unaware mother. It scares me to death to imagine what could have happened to my precious son had I not come across this website.

After a lot of deep thought and concern regarding vaccinations, I began researching the topic via the Internet. To my shock . . . [most] sites promoted vaccinations and their "benefits." Intrigued, I thoroughly investigated your website and, without hesitation, began informing myself of my legal rights. I realized that vaccinations are just another way for the government to try and control and dominate our lives. Intimidation is their only weapon. If it weren't for the information you have provided me, I would be ignorantly taking my son in for his next set of shots, this week to be exact. However, this will not be the case. My husband, his sister, his father, and grandmother, etc., were never vaccinated . . . [and] they are some of the healthiest people I know. . . .

I ordered a copy of my state's laws and also a sample affidavit. To my pleasant surprise, I received the materials promptly [from you] within 48 hours, along with a catalog of other resources which will provide me with more information on this frightening subject. . . . I also strongly admire your unbiased view . . . It did not surprise me to read the angry letters from those uneducated people who oppose our views. . . . my son and I would really like to thank you from the bottom of our hearts. . . . What you are doing is truly a remarkable thing, and may God look down on you and continue to bless you with the strength and courage to keep us informed.

—Letter posted on Think Twice Global Vaccine Institute
www.thinktwice.com/love.htm

VACCINE INFORMATION

These organizations offer comprehensive educational materials on the genuine science behind vaccines and what's really contributing to global illness; negative immunization reactions in children and adults; how to identify individuals who are at great risk if vaccinated; parental rights vs. government interference; practitioners who respect one's right not to vaccinate; natural and holistic immunity protocols; and how to fight for one's right not to vaccinate amidst repressive vaccine legislation. Parents who do not want their children vaccinated may also find medical or religious exemption forms on the websites. Some groups produce conferences and offer resources for countries outside the United States.

Children's Health Defense

website: childrenshealthdefense.org

This fantastic non-profit advocacy group is founded and led by attorney Robert F. Kennedy, Jr. From the website: "Its mission is to end childhood health epidemics by working aggressively to eliminate harmful exposures, hold those responsible accountable, and to establish safeguards so this never happens again."

Global Vaccine Awareness League

website: gval.com

Informed Consent Action Network (ICAN)

website: icandecide.org

National Vaccine Information Center

21525 Ridgetop Circle, Suite 100

Sterling, Virginia 20166

phone: 703-938-0342

fax: 571-313-1268

website: nvic.org

This consumer-led organization advocates for vaccine safety and informed consent protections, doing public education in the hope of preventing vaccine injuries and deaths. The website states: "We support the availability of all preventive health care options, including vaccines, and the right of consumers to make educated, voluntary health care choices."

Think Twice Global Vaccine Institute

PO Box 9638

Santa Fe, New Mexico 87504

website: thinktwice.com

Vaccination Liberation**Ingri Cassel, Director****PO Box 235****Hayden, Idaho 83835***website:* vaclib.org

The website states that the goals of this group are “To reveal the myth that vaccines are necessary, safe and effective; To expand our awareness of alternatives in healthcare; To preserve our right to abstain; To repeal all compulsory vaccination laws nationwide.”

WATER PURIFICATION / TREATMENT**AquaTru™, LLC****1392 Sarah Place, Suite B****Ontario, California 91761***phone:* 800-993-9651

800-220-6570 (customer service)

website: aquatruwater.com

This portable reverse osmosis unit removes fluoride as well as other contaminants. It wastes far less water than other RO units, and the water tastes sweet.

Tuning Element™©**1440 State Highway 248, Suite Q, BOX 435****Branson, Missouri 65616***contact:* Sean Martinez, founder and director*phone:* 417-973-0000*website:* tunedbottle.com

No matter what electromedical modalities or nutritional supplements you take, body tissues that are dehydrated will not be in optimal health. This company makes unique water bottles (glass or stainless steel) that are permanently imprinted with frequencies, and will structure any water poured inside of them in just one minute. “Before” and “after” photos of water (using Masaru Emoto’s methods) indicate that it is indeed structured: amorphously shaped water molecules assume lovely crystalline shapes. The water not only tastes better and sweeter, but if left in the containers for even a few days, it will not spoil or smell rancid.

Cell Wellbeing Hydration App*website:* <https://app.cell-wellbeing.com/EZwater>

In today’s world, the majority of people own mobile (cell) phones. Although convenient, these phones emit high levels of dangerous electrosmog. Therefore, imagine using your phone to emit frequencies that heal, rather than harm, “by harnessing quantum-mechanic technologies with biophotonic frequencies” according to the Cell Wellbeing website. Made for all makes and models of cell phones, the Hydration App utilizes proprietary cutting-edge technology that essentially turns your phone into a portable frequency unit. Administered through the flashlight function on the phone, the hydration app structures water and any other liquid. In structured liquids, the angles of the hydrogen and oxygen molecules are changed and the water becomes “wetter.” It enters and leaves the cells and tissues more easily, thus better hydrating the system and assisting in waste removal. This structuring is evidenced with “before” and “after” photos (similar to those shown from the experiments of Masaru Emoto), in which amorphously shaped water molecules assume lovely crystalline shapes—with corresponding healing properties of absorption and hydration. Per research from Dr. Gerald Pollack, bulk water becomes “EZ” (exclusion zone) water. Water, coffee, juice, tea, and other liquids become smoother and have a sweeter taste. Put into a spray, the water energizes one’s energy field and body; put into a face cream, the product energizes the skin, improves absorbability, and may even help prevent wrinkles (discussed in more detail in Appendix C). Also see pages 901 and 952 for information on the electrosmog-harmonizing L.I.F.E. App.

WEB and INTERNET TOOLS

The world wide web was created about fifty years ago by the United States government to allow scientists and researchers to communicate and share data with each other. No one expected the Internet to become so popular that one-third of the world now uses it regularly. However, the Internet is neither uncontrolled, uncensored, nor private. Browsers, search engines, and Internet providers track the locations of computers, track websites that people visit, and track items that consumers purchase—only to provide this data to third parties, including governments. Chrome, a browser created by the company Google, scans the documents of whatever computer uses it. Google (among other search engines) is extremely biased in its search parameters, offering websites that further its own agendas. This heavily impacts on holistic health, because when someone conducts a search for holistic protocols, Google selectively displays websites unfavorable to holistic medicine and provides websites favorable to establishment medicine. Moreover, Google and Microsoft sell user information and provide data to third parties.

Social media is no better because it’s all governed by “big tech.” Facebook, Twitter, and other sites instantly remove comments they don’t want to hear and remove entire accounts, under the guise of preventing “hate speech” and protecting the public from “false information.” YouTube (a popular video site owned by Google) is also heavily involved in censorship, demonetizing channels or eliminating entirely the accounts of those with whom it disagrees.

All of the above media follow similar agendas: Disempower people by limiting access to information; encourage everyone to think the same by punishing dissenting views; and control people by forcing them to rely on one centralized authority.

Below are alternatives to what many people are accustomed to using. The browsers, egroups, search engines, social media, and video channels were created by teams of computer experts who value privacy and have generously gifted the world with their products. Be aware, however, that in today's rapidly changing world, what was private and truly independent may change; so keep up to date by doing your own research.

Browsers (secure)

www.epicbrowser.com

The website states that this "private and secure web browser blocks ads, trackers, fingerprinting, cryptomining, ultrasound signaling and more. Stop 600+ tracking attempts in an average browsing session. Turn on network privacy with our free VPN (servers in 8 countries). We believe what you browse & search online should always be private. In incognito mode, you're still being tracked. Join over one million users who've chosen privacy. For Mac & PC."

www.brave.com

From the website: "Three times faster than Chrome. Better privacy by default than Firefox. Uses 35% less battery on mobile!" It blocks ads and trackers and lets you know how many have been blocked to date, along with how many minutes have been saved due to higher computer efficiency.

eGroup Hosting (secure)

www.groups.io

As of this writing, groups.io was the only available egroup host that offers a modicum of privacy. However, the owner has made a few stipulations regarding allowable content, and there is a bias stated toward those who are "anti-vaccine." I have personally found that messages in private groups that contain information will probably be posted as long as a perceived "anti-vaccine" message is not stated in the header.

www.signal.org

This doubles as a private group hosting platform and a private social media site. Encrypted voice/video calls can be made using Signal. Users can also set messages to self delete.

www.brave.com

Brave is a browser, but it also doubles as a search engine if you type keywords into the space at the top of the page.

Email (secure)

www.preveil.com

www.protonmail.com

Based in Switzerland, ProtonMail is a free, open source, encrypted email service founded in 2014 at the CERN research facility by Andy Yen, Jason Stockman, and Wei Sun. They write: "We are scientists, engineers, and developers drawn together by a shared vision of protecting civil liberties online. Our goal is to build an internet that respects privacy and is secure against cyberattacks." ProtonMail uses client-side encryption to protect email contents and user data, in contrast to other common email providers such as Gmail (from Google) and Outlook.com.

www.hushmail.com

www.tutanota.com

Search Engines (secure)

www.duckduckgo.com

www.dogpile.com

www.startpage.com (looks like Google but isn't)

Social Media (not censored)

www.brighteon.social

www.telegram.com

Video Channels (not censored)

YouTube, Facebook, and other high-profile Internet media are banning public figures in the field of alternative health, politics, and other fields that criticize and dismantle mainstream lies. In response to this censorship, Mike Adams of Natural News created an alternative, BrightEon, to give a voice to people with different points of view (you can apply for a channel). You may disagree with the viewpoints of some of the contributors; but if you want to respectfully share yours, Adams won't prevent you from voicing it. The other platforms have voiced similar goals.

Legal Implications of Rife Sessions

*It is no measure of health to be well adjusted
to a profoundly sick society.*

—J. KRISHNAMURTI, PHILOSOPHER AND SCIENTIST (1895–1986)

NOT FOR MEDICAL USE, PERIOD

Of all the questions that I have been asked about Rife Therapy, one answer that involves considerable elaboration is why it's not legal to provide Rife Therapy to others. This Appendix has been written for licensed health practitioners, people in the healing arts field who are unlicensed or who are not required to be licensed, and laypersons who want to share Rife Therapy with others. Please understand that I am not a lawyer. To write this, I did consult an experienced attorney and a manufacturer of frequency equipment who is versed in the law. However, what follows are only some *general concepts*. Legal matters can be complex, and laws differ from place to place. Therefore, I urge you to do your own research, and if necessary consult an attorney about the laws pertaining to where you live and work. I will be mainly discussing the legal climate in the United States. If you live outside the US this information may not apply to you, so please seek advice from a legal expert in your own country or municipality. Also, laws can change. What follows is the legal situation in the US at the time of this writing.

The foremost point to remember is that Royal Rife's technology was never approved for medical purposes. This means that *Rife Therapy is illegal to use for treating or curing any disease or medical condition*.

YOU CANNOT BE A "RIFE THERAPIST"

It's against the law to provide Rife Therapy for other people if you're using a rife machine to treat, manage, handle, reverse, cure, or otherwise deal with a disease or a medical condition. This is true whether you are a licensed health practitioner, an unlicensed person in the health field, or a layperson.

Some people who offer Rife Therapy to sick people—for the purpose of treating, managing, handling, reversing, curing, or otherwise dealing with a disease or a medical condition—believe that it's legal to charge for these services, or even give them away for free, if they make the disclaimer that they are not medical doctors and are not diagnosing, treating, or prescribing for a disease. They also believe that if a client signs a disclaimer, this absolves them from liability. *This isn't true*. If you are offering sessions to treat or cure a disease or medical condition, *even if you're not charging for it*, you are breaking the law. Take medicine out of the equation! Practicing medicine without a license is against the law.

A licensed health care provider who offers Rife Therapy as a medical treatment is in danger of being censured or fined by their medical licensing board. They are also in danger of losing their license to practice medicine. This is discussed more fully on page 915.

It's not legal to use Rife Therapy for medical purposes.

How Medical Licensing Started

In the so-called civilized world, laws restricting or regulating health care treatment arose with the existence of “special interest” groups that wanted ownership and dominion of treatment. In pre-industrial Europe, health care practitioners were mostly women who were herbalists, midwives, and counselors. In the 12th century, allopathic medicine was established with the help of universities. The peasant healers were seen as competitors to the male doctors, even though these rural practitioners were often the only health care providers for poor people who couldn’t afford the fees charged by the growing allopathic medicine business.

As the medieval Church rose to power, its money and psychological clout, combined with the money and military power of royalty, created the witch hunts that lasted for centuries. The witches were accused “not only of murdering and poisoning, sex crimes and conspiracy,” write the authors of *Witches, Midwives, and Nurses: A History of Women Healers*, “but”—in an eerie forecast of what would occur centuries later—“of helping and healing.” They quote a leading British witch hunter of the time:

For this must always be remembered . . . that by witches we understand not only those which kill and torment, but all Diviners, Charmers, Jugglers, all Wizards . . . which do not spoil and destroy, but save and deliver . . . It were a thousand times better . . . if all Witches, but especially the blessing Witch, might suffer death.¹

The ruling powers didn’t just persecute the healers from the lower peasant classes. In 1322, a literate and trained woman named Jacoba Felicie was brought to trial by the Faculty of Medicine at the University of Paris for “illegal practice.” Despite the appearance at her trial of six clients who swore that she had cured them after the state-sanctioned doctors had failed, Felicie was charged with a crime. There were many similar trials of other healers, mostly women.

The parallel today is striking. “Alternative” doctors treat thousands for so-called terminal illnesses using methods not approved by the licensing boards, and then despite (or rather because of) their excellent track record they are prosecuted for the crime of helping people get well. In the middle ages, the rationale for witch hunts was based on religious dogma. In modern times, the rationale is said to be based on science. In reality, it’s all based on hysteria. This is how our health care system has come to be based on hierarchy and domination. Today, the strongly entrenched power elite still tries to prevent people from making their own decisions about what kind of health care to use.

NO EXCUSES, IT’S AGAINST THE LAW

Licensed Health Care Providers

Whether you are a medical doctor, a dentist, naturopath, chiropractor, osteopath, massage therapist, psychologist, acupuncturist, nurse, or other practitioner, if you use Rife Therapy to treat a medical condition, it’s against the law. *This applies whether you charge for sessions or offer them for free.* Even if you provide services “off hours,” you still have a medical license. You must obey the rules of your licensing board at all times, or risk losing your license.

That said, there are several exceptions. One is from the FDA itself: You are allowed to use laboratory equipment and modify it for your practice, *as long as the use is responsible and is not being offered for medical purposes.* A frequency generator is standard laboratory equipment! See Chapter 4, page 588, for more details. Other exceptions are discussed on page 917.

Unlicensed Persons in the Health Field

Whether you are an unlicensed or de-licensed physician, a doctor from foreign shores who can’t use their degree elsewhere, a Reiki master, Life Coach, chakra balancer, or other “alternative” practitioner, if you use Rife Therapy to treat a medical condition, *it’s against the law. This applies whether you charge for sessions or offer them for free.* If, however, you state that you are “balancing the chakras” of your client, you *might* be able to offer sessions (see **How Did We Get Into This Mess?**, next page). It depends, sometimes on arbitrary law enforcement standards, and sometimes on whether or not you are considered a threat to the medical establishment.

Keep in mind that it’s irresponsible, unethical, and harmful to see clients with serious medical conditions such as cancer or Lyme. In such cases, rifting could actually make them worse. People with cancer should rife every day or else the cancer may mutate and spread. They should be medically supervised. And they should have their own frequency equipment so they can give themselves sessions as needed. Don’t play doctor. Be appropriate.

If you do decide to offer Rife Therapy to others at no charge, *you must not advertise that the sessions are for a medical condition*, because then you will be breaking the law.

Laypersons

Whether you are charging money for your time or offering sessions for free, all of the rules for unlicensed persons in the health field apply. Please read them carefully.

HOW DID WE GET INTO THIS MESS?

America (which was colonized after the British stole the land from the Natives who lived there) obtained its legal system from British law. British law sprang from the “divine rights” of kings, who exercised absolute dominion over everyone else. In Britain, there were two kinds of courts: the King’s courts, or courts of law, and the Church’s courts, which were referred to as courts of equity and had under their jurisdiction whatever the King decided he did not want under his own domain.

The King’s word was the stronger of the two courts. Any behavior was legal except for what the law (the King) explicitly stated was illegal. Therefore, if the King proclaimed “you must not do this,” whatever he proclaimed one must not do, was by definition a crime. What the King called crimes were any acts that directly affected him, such as not paying taxes to the Crown.

The courts of the Church governed all acts that were not expressly forbidden by the King. These acts were not considered crimes, even though they might negatively affect people. If two men had a fistfight, this was between the parties involved and did not involve the King. Thus their behavior came under the Church’s jurisdiction. That is why it was equity law instead of criminal law.

In the United States, what had been the King’s courts in England were now the criminal courts. When charges are brought against someone in a criminal court, the documents always read “The state versus so-and-so [a person].” What had been the Church’s equity courts were now the civil courts. When charges are brought against someone in a civil court, the documents always read “so-and-so [a person, corporation, organization, government, etc.] versus so-and-so [a person, corporation, organization, government, etc.]”

There are other differences between criminal and civil law. Under criminal law, if someone commits a crime, s/he is innocent until tried by a jury of peers and proven guilty. Under civil law, one may be ordered by a judge to refrain from certain behavior until the trial. For example, if a midwife has been accused of practicing medicine without a license, a judge has the right to forbid her from further helping women give birth until she has her trial and receives a verdict.

When the US was formed, each state was like a separate country within the larger umbrella of the federal government. The federal government was formed for three purposes only: to provide for the common defense, regulate interstate commerce, and oversee the minting of money. Even though the federal government has become much more powerful than the founders intended, the remnant of individual statehood can still be seen today in

the lack of consistency in different states’ laws on the same issues, from divorce to local voting to medical licensing.

All of the recognized health care professions such as medicine, chiropractic, massage therapy, surgery, etc., are regulated by professional boards that are given power by their particular state to monitor and control their respective professions. The state boards operate legally in an area somewhere between criminal law and civil law.

The rules of one board can differ from the rules of another, depending on the states in which they operate. However, all state boards regulate the content of professional education. The boards set the rules under which the professionals may practice their duties. The boards issue licenses that allow the health care provider to practice in that particular state. And the boards have the power to *revoke* those licenses if they think that the professionals are behaving in a manner that the licenses don’t permit.

As long as a health care provider upholds for all patients a certain *standard of care* that has been determined by the state board, s/he is allowed to keep the license. When that standard of care is no longer upheld, the license is revoked. The rationale for this cancellation is that by deviating from licensing requirements, the professional is changing the standard of care for all *other* health professionals, and is thus *endangering the profession as a whole*.

State boards wield considerable power. They are allowed to revoke someone’s license without a jury trial anytime they want. The notion “innocent until proven guilty” does not pertain to a state board. Once someone’s license is revoked, the health care professional can no longer work in that field.

What constitutes standard of care? Health care licensing regulations vary, depending on the state. For instance, in the US, only licensed medical doctors are permitted to diagnose, treat, and prescribe for illness considered pathogen-based, such as malaria or scarlet fever. But the laws can vary greatly. In some states, nurse practitioners can diagnose, treat, and prescribe for certain illnesses. In some states, chiropractors may legally diagnose and treat skeletal and muscular disorders because these disorders are considered within their professional expertise—even though other states might disagree and impose strict limitations on *their* chiropractors. Similarly, in some states licensed massage therapists are forbidden to promote massage as improving “range of motion” (even though it often accomplishes this) because legally, only physical therapists are allowed to use this phrase. From a holistic viewpoint, these independent categories prevent quality care. Of course one would not want a physical therapist performing surgery—that’s what surgeons are trained to do—but much more healing would occur if practitioners

After the 1800s: AMA Influence

The American Medical Association (AMA) was founded in 1847 around two propositions: one, all doctors should have a “suitable education” and two, a “uniform elevated standard of requirements for the degree of MD should be adopted by all medical schools in the US.” In the days of its founding, AMA was much more open—at its conferences and in its publications—about its real goal: building a government-enforced monopoly for the purpose of dramatically increasing physician incomes. It eventually succeeded, becoming the most formidable labor union on the face of the Earth.

AMA’s initial drive to increase physician incomes was motivated by increasing competition from homeopaths (AMA allopaths use treatments—usually synthetic—that produce effects different from the diseases being treated while homeopaths use treatments—usually natural—that produce effects similar to those of the disease being treated). This competition did serious damage to the incomes of AMA allopaths. In the year before AMA’s founding, the *New York Journal of Medicine* stated that competition with homeopathy caused “a large pecuniary loss” to allopaths. In the same issue, the dean of the school of medicine at the University of Michigan railed against competition because it made treating sickness “arduous and un-remunerative.” Apart from reversing rapidly declining incomes, allopaths also wanted to rescue their public reputations, which quite reasonably suffered given their proficiency in killing patients through such crude practices as bloodletting (“exsanguination”) or mercury injections (poisoning). . . . The Massachusetts Medical Society opined in 1848 that physicians should be “looked upon by the mass of mankind with a veneration almost superstitious.”

“The curse of medical education is the excessive number of schools” [was said by] Abraham Flexner [in] 1910. To accomplish the twin goals of artificially elevated incomes and worship by patients, AMA formulated a two-pronged strategy for the labor market for physicians. First, use the coercive power of the state to limit the practices of physician competitors such as homeopaths, pharmacists, midwives, nurses, and later, chiropractors. Second, significantly restrict entrance to the profession by restricting the number of approved medical schools

in operation and thus the number of students admitted to those approved schools yearly.

AMA created its Council on Medical Education in 1904 with the goal of shutting down more than half of all medical schools in existence. . . . In six years the Council managed to close down 35 schools and its secretary N.P. Colwell engineered what came to be known as the Flexner Report of 1910. The Report was supposedly written by Abraham Flexner, the former owner of a bankrupt prep school who was neither a doctor nor a recognized authority on medical education. Years later Flexner admitted that he knew little about medicine or how to differentiate between different qualities of medical education. Regardless, state medical boards used the Report as a basis for closing 25 medical schools in three years and reducing the number of students by 50% at remaining schools.

Since AMA’s creation of the Council a century ago, the US population (75 million in 1900, 288 million in 2002) has increased in size by 284%, yet the number of medical schools has declined by 26% to 123. In terms of admissions limits, the peak year for applicants at US schools was 1996 at 47,000 applications with a limit of 16,500 accepted. This works out to roughly 64% of applications rejected. . . . AMA would likely argue that there’s nothing necessarily wrong with very high rejection rates. This is correct, except for the fact that these rates are being applied to pools of candidates who are cream-of-the-crop in quality and have put themselves through a very costly admissions process. . . .

AMA has built an impressive edifice, one that has completely insulated physicians from recessionary (“cyclical”) and until recently, technological (“structural”) unemployment. While decade in, decade out, recessions, depressions, consolidations, and (recently) outsourcing have dislocated millions of blue-collar, engineering, computer programming, and middle management employees from jobs and forced permanent career changes, physicians as a class have been almost completely immune. Unlike workers in most other industries, a competent, licensed physician with a clean record who remains unemployed despite months and months of search for work is unheard of in the US.

—Dale Steinreich, “100 Years of Medical Robbery”
Townsend Letter, October 2004

could become more interdisciplinary. However, laws circumscribe practitioners into their own tight niches.

The professionals who have the most leeway to practice in many areas, with no or minimal training, are medical doctors. This was highlighted by the case of a doctor in the state of Arizona who was, by law, allowed to perform cosmetic surgery on clients without training. Unfortunately, his lack of special training in performing surgery on the face cost several people their lives. On the other hand, most medical doctors are highly regulated as to what procedures they are allowed to offer for cancer. In the US, laws concerning cancer care are quite restrictive. Doctors can lose their licenses for treating cancer with anything other than chemo, radiation, and surgery. This leads us directly to a discussion about Rife Therapy.

Generally, in the US no health professional is allowed by a state board to use Rife Therapy for treating disease because the technology is not approved by the Food and Drug Administration. Should a doctor use it, s/he is performing a service that other doctors don't perform, and is therefore altering what the state medical board has determined is the standard of care. According to the state board, the doctor is now endangering the practice of other doctors. Because the doctor has violated the agreement with the state board that issued the license, the doctor has no protection in civil court if he or she is sued: the law has been broken, end of discussion. Thus the state board can revoke the doctor's license. And the board *will* revoke the license even if no legal action has been taken against a doctor by a client—and even if the person in fact wants, likes, has benefited from, or needs the treatment.

Remember the “hypocritical” doctor described in Chapter 6? Fear of having his license revoked may be why he received chelation therapy himself while telling his client that it was no good. This may explain why many doctors are quite secretive about their sympathy with (and participation in) modalities that are not FDA-approved. As long as state licensing boards so tightly control what health care providers can and can't do, as well as what they can and can't *say*, health professionals will be limited in their ability to help their clients.

Now you know why doctors, chiropractors, etc., don't administer rife frequency therapy. They may want to. They may in fact use it in their own homes for themselves, their families, and their pets. However, they dare not mention it to their paying clients—or even clients who aren't paying.

What about legal ramifications for the layperson? If, *for a fee*, a layperson performs a material service for someone else that makes them *feel better*—whether it's giving advice to take a relaxing hot bath to calm their nerves, selling them supplements, or even offering a glass of

water—*this may be construed as practicing medicine without a license*. Practicing medicine without a license is against the law and therefore a crime. (“Feeling better” has wide implications, but this is the law as it now exists.) Even if the layperson uses words like “support” and “restore balance,” these can still be *interpreted to mean healing of some sort*, which is practicing medicine without a license. Thus, various forms of “energy” work like chakra balancing or Rife Therapy—which are not approved for medical purposes—are legally forbidden. (Exceptions are discussed below.)

Laws that restrict the offering of services are not limited to payment. A suggested donation of any monetary amount, or even a non-cash donation such as a chicken or pair of free movie vouchers, is considered a fee. To give another scenario, in the state of Georgia, even if you don't accept payment, having a room in your home or office where people visit to receive (construed) “medical” services might cause trouble. Each state has different laws.

Someone upset by “practicing medicine without a license” might report someone. It's unlikely that the authorities would consider a chakra balancer threatening. This is because a chakra balancer is unlikely to earn enough money (or become famous enough) to threaten the livelihood of a physician. But if that chakra balancer successfully made people with “terminal” illnesses well, and was snatching business from disgruntled doctors, the authorities might be more inclined to arrest that person.

Not all laws are enforced all the time, and some laws are not enforced even most of the time. To my knowledge (using an above example), not many people have been arrested for accepting chickens in exchange for giving rife sessions. However, if the legal authorities wanted to, they *could* make arrests. One attorney told me that if all the laws on the books were enforced, over half the population would be in jail.

EXCEPTIONS

Some laws are unreasonable or impractical to enforce. For instance, some states forbid certain sexual contact between husband and wife. No one knows whether or not these laws are being broken unless a spy is in the bedroom or the couple tattles—and even then, it's doubtful that law enforcement would feel a need to prosecute. With laws that don't hurt others, when enough people routinely disobey them, they're eventually changed to reflect reality. This has happened in some states with the posted speed limit. When enough people drove 10 miles above the speed limit, the signs were changed to reflect the reality.

Under a few conditions (which vary between states), innovative learning or healing modalities may be legal. For instance, a religious organization might be created whose tenets (to use one example) involve the use of vibrational healing. Or, an educational foundation might be created to teach the theory and practice of vibrational healing. *However, such organizations must operate within the law.* There may be different criteria as to what constitutes *bona fide* educational, religious, or spiritual organizations. It's beyond the scope of this book to advise how that is done; and besides, laws vary. Consult a qualified attorney.

Now I want to focus on the legal aspects of offering Rife Therapy to others. It's *not* against the law for you to use rife equipment to experiment on yourself, on laboratory animals, and on microorganisms. There is also nothing illegal about a layperson sharing rife equipment with others *as long as s/he does not accept payment for it.* (If a licensed health care professional shares rife equipment with others—even if it's *not* for a fee—and the licensing board discovers this, the board can always say that the professional has violated professional licensing credentials. It's not as though the health care professional can remove the license as one removes a coat: s/he remains licensed at all times, even if s/he isn't formally conducting business.)

It's also *not* against the law to give talks or write about any aspects of Rife history technology. (The dissemination of information is protected by the First Amendment, which guarantees freedom of speech.)

What, then, are the chances that Rife Therapy will be legally approved for medical use in the US? Two major changes would have to take place. The FDA (or another agency) would have to approve it. And health care licensing boards would have to include rifting as part of their standard care. Meanwhile, if people want access to the technology, they can either receive treatment in countries where Rife Therapy is legal, they can borrow a machine belonging to a friend, or they can purchase their own unit.

People who are financially secure can easily buy a rife machine. But the average consumer—given the lack of government approval, media blackout, and the muzzling of sympathetic doctors by state licensing boards—may not know enough to even consider the technology. Here is the crux of the challenge. How can people feel comfortable with the technology unless they hear about it often, and in a positive way? And how can they gain repeated favorable exposure to the technology if a government agency doesn't approve it? In our culture, FDA approval is equated with effectiveness and safety—even though, as discussed in Chapter 1, legal sanction and effectiveness usually have nothing to do with each other.

Advertising consists of bombarding people with a message about a product so often, that once the message becomes entrenched in everyday awareness, the product is accepted as worthwhile or at least innocuous. Repetition works on the nervous system of human beings like a horse-drawn carriage traveling on a dirt road: the wheels create grooves in the road, so by the time other carriages come along, their wheels follow the same grooves because it's the path of least resistance. Continually receiving the same input restimulates and reinforces the original nerve pathways—and along with them, the original message. Then, what was once only an idea among many becomes the norm, something that's accepted without question.

When a healing modality is legalized, it becomes *safe by default*. Once it is legalized, it becomes familiar. As a familiar modality, it then becomes the *only* modality—and thus is considered the only *safe* one, regardless of its merit. Rife Therapy has not received much press compared to drugs or surgery. Thus, its lack of publicity automatically makes people doubt its safety. This in turn makes it harder to legalize. The fact that providing rife sessions for a fee is not legal also adds to the doubts about its safety. This generates more unfavorable publicity, or suppresses mention of the technology altogether in mainstream outlets. Thus the cycle continues.

There have been small victories, though. The California Health Freedom bill, in effect since January 1, 2003, made it legal to practice any unlicensed non-invasive therapy (including homeopathy) in California as long as certain guidelines are followed. One guideline requires the practitioner to inform the client of his or her background, and obtain the client's permission to use the therapy. In Arizona, anyone with a license in homeopathy is legally permitted to use Rife Therapy, which is considered an acceptable standard of care. Laws vary between states.

One way to help electromedical healing modalities gain medical, social, and political acceptance—and thus become legal—is to publicize them within the limits of the law. This *Rife Handbook* is my attempt to help in that wave of awareness.

ENDNOTES

Healing with Electromedicine and Sound Therapies

The universe is wider than our views of it.

—HENRY DAVID THOREAU, AMERICAN NATURALIST AND AUTHOR (1817–1862)

INTRODUCTION

In the 1960s, counterculture hippies were urging us to give peace a chance (great advice). To expedite that process, it was helpful to have “good vibrations”—considered so important that the Beach Boys wrote a catchy song with this title. It was easy to tell who had good vibes and who didn’t. An optimistic, considerate person was considered “high frequency,” while a pessimistic, disagreeable individual was “low frequency.” Not surprisingly, everyone wanted to be around the folks who had good vibes.

Colloquialism aside, saying that someone is “high frequency” is based on legitimate science. Every molecule, cell, living body, and object is comprised of energy that manifests as physical matter. Some of that energy is detectible as frequencies that belong to one or more radiation bands in the electromagnetic spectrum. And these frequencies correspond to biochemical and biological processes in the body.

In the healing arts, there are different ways to affect matter. With conventional medical care, the chemical, functional, and/or structural change in organs, glands, and other tissues are created either through biochemical manipulation (drugs) or physical manipulation (such as surgery). With electromedical therapies, healing is achieved by working with the electromagnetic radiation

(emissions) and related energy fields that form, and are emitted by, physical matter. Basically, electromedical devices produce and focus specific frequencies that can be in the form of electromagnetic fields, electrical current, magnetism, visible light, heat, or other energy.

Although electromedicine is widely used in Europe, it is less known in the United States. Few people in developed countries would question the use of the ubiquitous transcutaneous electrical nerve stimulation (TENS) unit, which emits small amounts of electrical current to manage pain. And magnets embedded in the insoles of shoes, also for pain management, are now a regular item in consumer catalogues. But electricity and magnetism are still primarily used diagnostically—such as with the standard electrocardiogram (EKG or ECG) to assess the health of the heart, and with magnetic resonance imaging (MRI) to show the inside of the body. Most medical professionals, as well as the lay public, are not inclined to take advantage of less familiar electromedical devices because they don’t understand how they work. And those who do use the equipment might talk about “frequencies” or “energy” without fully understanding what these terms mean or knowing the science behind the technology.

Fortunately, receptivity to electromedicine is increasing. Health professionals are expanding their practice (and their success rate) with safe, holistic technologies. And the public is beginning to recognize

and request electromedicine as an effective and valid treatment modality. In this review, I'll explain what "frequency" and other terms mean as applied to the electromagnetic spectrum. I will explain electromagnetic energy in living systems, explore several types of electromedical modalities, and discuss the related modality of sound therapy.

ELECTROMEDICINE THROUGHOUT HISTORY

Healing with electromedicine is an ancient practice. Before we learned how to manufacture magnets of ceramic and metal, our ancestors discovered that magnetite, a mineral (which they called *lodestone*), emitted a magnetic charge. Placing it on the body reduced pain. We also harnessed naturally-occurring electricity for healing. Egyptian texts dated 2750 BC described deliberate exposure to electric eels and torpedo rays, ocean animals that could administer electric shocks. The shocks could be therapeutic, providing they didn't cause serious damage first. In addition to static electricity (friction) and magnetism (lodestone), we used the sun (for its far infrared and ultraviolet radiation), visible light (for its different colored wavelengths), and sound, along with other energies as well.

These early electromedical therapies may have been based on natural phenomenon, but as we learned to harness and replicate the naturally-occurring energies, they became manageable and measurable. By the 1900s, when electrical power was common in the home as well as the workplace, electrical devices invented for medical treatments were considered mainstream. In *Electrotherapy and Light Therapy with Essentials of Hydrotherapy and Mechanotherapy*, published in 1949, Richard Kovács describes an impressive array of electricity-run equipment, most of which had already been in use for half a century. Among other technologies, this equipment utilized alternating current, direct current, low frequencies, high frequencies, static electricity, diathermy, infrared rays, ultraviolet rays, and ultrasonics. Modern electromedicine practitioners will recognize some of these devices as forerunners of those used today—if not *the* machines still being used, as some devices haven't changed much in a hundred years. Some of this equipment included Georges Lakhovsky's multi-wave oscillator, the Violet Ray (which utilized Nikola Tesla's coil), and Edgar Cayce's Wet Cell. Dr. John Harvey Kellogg's Electric Light Bath (or Electric Light Cabinet)—which used light bulbs invented by his friend Thomas Edison—was a very popular forerunner of our modern far infrared sauna.

The conditions that these devices were used to manage or eradicate were virtually unlimited: muscular aches and pains, skin conditions, gynecological problems, some heart conditions, respiratory ailments, gastrointestinal disorders, acute and chronic infections, and degenerative diseases.

Given the variety of such equipment almost a century ago, what seems remarkable today is not the abundance and range of devices, but the resistance to electromedicine by both the public and the medical profession. Of course, the vilification of these therapies by the medical mainstream—and laws passed to suppress the use of such devices—drove these modalities out of the public's immediate consciousness. Electromedicine as a valid treatment modality has met with derision and skepticism from practitioners and laypeople alike. However, the body clearly responds to electromagnetic energies. If all sorts of electrical, thermal, magnetic, and sound-based devices are used for testing, why can't they be used for healing?

As might be expected, the pharmaceutical industry has taken advantage of people's ignorance and resistance to any modality that seems new and strange, for if the benefits and track record of electromedical devices were widely publicized, drug companies would lose billions of dollars each year. Likewise, mainstream media doesn't make an effort to educate consumers because it depends on considerable advertising revenues from drug companies.

Unlike a drug, which can be used just once by one person, and is intended for a single condition, the electromedical modalities that have emerged in the last century:

- ◆ Are non-invasive.
- ◆ Support the body's innate ability to heal, instead of substituting for its natural functions.
- ◆ Are fairly easy to use, by laypeople as well as health professionals.
- ◆ Can be utilized over the course of a lifetime (because they address many conditions).
- ◆ Can be used for more than one person.
- ◆ Are relatively inexpensive, considering their range and scope.

How and why do electromedical devices work? Whether you're a health care provider or a seeker of health services, understanding the science behind electromedicine can make the difference between discerning good vibrations from bad. The best place to start is with an overview of discussion of the EM spectrum and its related component, sound.

THE ELECTROMAGNETIC SPECTRUM

Figure 1: The Electromagnetic Spectrum

THE ELECTROMAGNETIC SPECTRUM

Defined by Its Effects

The electromagnetic spectrum (or EM spectrum, sometimes also called EM waves) is the term used for many of the different energy oscillations that comprise our known universe. As shown on the chart of the EM spectrum (see Figure 1, previous page), we can create these different oscillations with various electrical devices and some non-electrical (passive) materials, and produce tangible physical phenomena. For example, we access frequencies on the radio spectrum with an antenna, which transmits and receives radio broadcasts. We do something similar for TV broadcasts. An X-ray machine utilizes certain radiation on the X-ray band, which allows us to see inside the body. We use specific portions of the infrared band for heating saunas, and so on.

Frequency, Wavelength, and Amplitude

All the energies in the EM spectrum have different frequencies. The term *frequency* pertains to the number of cycles per second (CPS) at which a wave vibrates or moves. (The term “CPS” is considered archaic and has now been replaced with hertz, abbreviated Hz, named after 19th century German physicist Heinrich Hertz who worked with electromagnetic waves.) Waves also have different sizes or lengths, with various terms such as *micron*, *angstrom*, *nanometer*, and *meter* used to measure the length. See Figure 2, below. (The waves shown here are sine waves; different shaped waves will be discussed later.)

Wave is a *movement of energy* along a directional axis.

Frequency is a *rate of oscillation* measured by the number of wave cycles per unit time (usually in hertz).

Wavelength is the *length* or *distance* between two identical points on the wave (which comprises one complete wave cycle). The size of the wave determines what term of measurement is used.

Amplitude is the highest point on the wave. This corresponds to the *maximum intensity* of the signal, comparable to turning up the volume on a radio.

Figure 2: Key EM Wave Definition

Now see Figure 3. The peak of the wave is the highest point on top. The trough of the wave is the lowest point on bottom. The length of a wave is often measured peak to peak (see arrows). Technically, however, any portion of the wave can be used as a reference point, as long as the measurement assesses one complete cycle (peak to peak, trough to trough, etc.).

Figure 3: Length of One Wave Cycle

As the number of waves within a given space—in other words, their *frequency*—increases in number per second, their size becomes *smaller*. And as the number of waves *decreases* in number per second, their size becomes *larger*. Put another way, the *higher the frequency* or oscillation rate of a wave, the *smaller the wavelength*. The *lower the frequency* or oscillation rate of a wave, the *larger the wavelength*. “A homely comparison to visualize this,” Kovács analogizes, “may be a motley army of giants and dwarfs, all under orders to reach the same goal simultaneously; in order to do so the giants step out leisurely, while the dwarfs run and take hundreds of steps for each one of the giants.”¹

In Figure 4, the frequency of the top wave is higher than the frequency of the bottom wave, because the distance is shorter between the peaks of the waves. The waveforms in this example are simple *sine* waves.

Figure 4: Comparing Two Frequencies

In order from slower-moving to faster-moving, frequencies in the EM spectrum include radio waves, microwaves, infrared light, visible light, ultraviolet light, X-rays, and gamma rays.

EM Radiation vs. EM Fields

So far, I have been discussing electromagnetic radiation from the EM spectrum. Electromagnetic *radiation* (radiant energy) and electromagnetic *fields* (non-radiant spaces in which energy exists) operate somewhat differently. Both come from electromagnetic sources. However, energy that *radiates* exists separately from its source. It travels away from its source, and it continues to exist even if the source is turned off. EM *fields* are not projected out into space. They no longer exist when the energy source is turned off.

Now let's take a look at the EM spectrum's offspring, electric fields and magnetic fields.

Electric Fields and Magnetic Fields

The existence of an EM field includes both electric and magnetic fields. Electrical and magnetic fields can be separated from EM fields as their own distinct energies. You might consider electricity and magnetism to be subsets of electromagnetic energy. An EM field has certain properties, electrical fields have other properties, and magnetic fields possess yet others.

Electricity and magnetism share a complex and intimate relationship with each other. An oscillating electric field generates an oscillating magnetic field, and an oscillating magnetic field generates an oscillating electric field. Each exists at right angles to the other. When *movement* is introduced to *either* a stationary electrical field *or* a stationary magnetic field, the emissions induce *electromagnetic* fields in biological organisms (humans or animals) that are exposed to such fields. I'll elaborate on this shortly, as it's an important point when discussing various electromedical devices.

Electricity

For the purposes of this discussion, we can define electricity as a flow of electrons around a circuit. The charged particles involved in electricity are called *electrons*. They move through a network of *conductors*, or channels that conduct or move them. Electricity has several forms. It can build up in one place as static electricity, for example when you run your feet over a carpet. More commonly, electricity flows from one place to another as current, like water flowing in a river.

Electrical charge can flow in a continuous smooth line, or back and forth. With direct current (DC), the electrons always flow in the same direction, from a point of origin to the final destination. With household alternating current (AC), the electrons reverse direction about 50–60 times each second. All electrons move back and forth very short

distances, pushing against adjacent electrons and causing them to move. This “back and forth” AC movement of electrons generates electricity much more efficiently than the “straight line” DC movement of electrons, but it's very jarring to the nervous system. Most of the world's electricity runs on AC, rather than DC. Batteries provide direct current. Some electromedical devices convert the AC to DC. Most electromedical equipment runs on AC, but their therapeutic properties far overshadow the effects of the AC that powers them.

Magnetism

All magnets possess two sides or distinct fields, to which we give the names *north pole* and *south pole*. As with electrical charges, unlike poles (north and south) attract each other, and like poles (north-north or south-south) repel each other. If even a sliver is sliced off a magnet, there will still be a south and a north pole at either end. Earlier I discussed how magnetism and electricity are related. The authors of *Magnet Therapy* address the movement of electrons in magnets:

Magnetism is not a characteristic confined to iron, or even to metals. It refers to electrons that are orbiting around their atoms. Electrons have a property called spin, which makes them act like miniature magnets with a north and south pole. If you force a lot of neighboring electrons in anything to spin so that their poles are aligned in the same direction, you can make it magnetic. Iron is very easy to magnetize because it has lots of surplus electrons hanging around that will readily line up any way you want them to.²

Briefly, what's commonly called the north pole of a magnet sedates; and what's commonly called the south pole of a magnet stimulates. I'll address this later when focusing on therapies.

Sound

The EM spectrum is often compared to sound, since the two phenomena share many of the same features. Sound is comprised of *mechanical pressure waves* in a compressible medium such as air or water. Put another way, sound is created when an object moves with enough force to displace (compress) the surrounding air (or other medium capable of carrying these waves). We hear many of these waves (air currents) as audible frequencies (sound), because after the air reaches the ear, it minutely moves the eardrum—a delicate drum-like membrane—and sends the oscillations to the brain, where they are

then decoded into traffic noise, music, spoken words, the barking of a dog, and so on. The waves of sound could be created by a pen dropping on a desk, someone's vocal cords moving during speech, or a violin string being plucked.

The frequency of a wave (expressed as cycles per second) that applies to the EM spectrum also applies to music, a subset of sound. The pitch of a note depends on its frequency. A *lower frequency*, or an oscillation rate of *fewer* Hz, is *slower-moving* and produces a *lower tone*. A *higher frequency*, or an oscillation rate of *more* Hz, is *faster-moving* and produces a *higher tone*.

The waveforms of *music* on an oscilloscope show organization, with obvious patterns.

The waveforms of *noise* on an oscilloscope show disorganization, with no discernable pattern.

Music = Symmetry

1. **Tuning Fork.** Very pure sound; prongs vibrate regularly.
2. **Violin.** Bright sound, angular waveform. Same pitch as tuning fork: peaks of the waves are the same distance apart and pass at the same rate as those produced by the tuning fork.
3. **Flute.** Playing same note as first two. Purer sound than that of the violin, so its waveform is more rounded.

Noise = Asymmetry

4. **Cymbal.** Irregular patterns and jagged, random waveforms, no discernible pitch. No regular pattern of peaks and troughs.

Dorling Kindersley Encyclopedia

Figure 5: Comparing Music and Noise Waveforms on an Oscilloscope

Frequency can be more easily understood and perceived with music than with random sound (noise). Noise—as well as some harsh electronic music—is comprised of *disorganized waveforms*. This disorganization manifests acoustically as indistinct, muddy pitches. Music, on the other hand, is comprised of *organized waveforms*. This organization manifests acoustically as distinct, discernible pitches. The difference between music and noise can be seen on an oscilloscope—a testing device that shows visually what we hear acoustically—with real-time pictures of waveforms; see Figure 5. In the examples of music, all instruments are playing the same note.

Noise or random sound on the oscilloscope appears as irregular waveforms, while music or pure tones appear as regular waveforms. For most people, the acoustic and the visual correlate: music is more pleasing than noise to the ear, and regular waveforms are more pleasing than irregular waveforms to the eye.

Different Shapes of Waves

As illustrated in the diagram of notes played by various instruments, waveforms have different *shapes*. Figure 6 shows some common ones in their simplest form.

Figure 6: Waveforms.

(A) Sine; (B) Triangle; (C) Sawtooth; (D) Square

More complex organisms contain more frequencies and possess more complex waveforms. A useful analogy between simple and complex forms is the difference between plucking a single string (which represents a simple organism like an amoeba) and playing an entire orchestra (which represents a complex organism like a human being).

The various shaped waves also have different functions. Using the analogy of music, the sine wave is a simple, single tone, whereas the square wave contains many harmonics. A *harmonic* is an additional wave pattern produced by the fundamental or main frequency. As secondary wave patterns, harmonics are not as strong as the fundamental frequency that produces them. Harmonics are created similar to the way ripples are produced when you drop a pebble into a pond. The fundamental frequency is the

indentation in the water where you dropped the pebble. The water rippling out in circles is the harmonics. The lines produced by the original pebble toss get fainter and fainter, as do the harmonics.

There's a finite amount of energy with any given signal. Harmonics utilize energy. The power available in harmonics decreases as the multiplication factor increases, just as the ripples closest to the pebble are strongest, and fainter on the periphery. Each harmonic drops off in amplitude (power) as the wave travels away from the main signal. So, since there's a fixed amount of energy for both the fundamental frequency and its harmonics, the signal is dissipated.

Harmonics can be useful in certain therapeutic applications. Depending on the electromedical device being used and the particular effect desired, one might decide to use a square wave, which is rich in harmonics, or a sine wave, which is a stronger, single tone.

Symmetry and Asymmetry: The Language of Math and Music

The symmetry of music and the asymmetry of noise can also be described *mathematically*. Mathematically, sound is comprised of random frequencies that have *little or no relationship* to each other. Mathematically, tones or music are comprised of frequencies that *do* have relationships to each other. (A single, true tone will naturally be in symmetry with itself.) The absence of certain mathematical relationships in sound and the presence of those relationships in music explain why sound can irritate the nerves and music can calm them.

Although EM fields and sound transmit frequencies in different ways, the mathematical measurements representing the relationship between electromagnetic frequencies are the same as for music. Put another way, the harmonic relationships of each system are governed by identical mathematics. The frequencies of musical tones and the EM spectrum exist in octaves, higher harmonics, and lower harmonics of each other. Both musical tones and EM spectrum frequencies have mathematical relationships to some of the other frequencies that are higher or lower. For example, a frequency that is multiplied or divided by two produces a higher or lower *octave* of itself.

Like sound, EM fields possess symmetry and asymmetry. Various electromedical devices can detect the equivalent of either noise or music in the oscillations of cells and tissues in the body. When the oscillations are *not mathematically harmonious* (which corresponds to noise), there is *disease and degeneration*. When the oscillations are *mathematically harmonious* (which corresponds to music), *the cells function optimally and correctly*.

Pulsed Magnetic Field / PMF

Some equipment induces *movement* in a stationary magnetic field for therapeutic purposes. The magnetic field is created by the movement of electrons through a wire. When this current flow is regularly interrupted, it's referred to as *pulsed*. This is where the phrase *pulsed magnetic field* comes from, commonly abbreviated *PMF*.

Pulsing a wave means that the signal is on for a given period, then off, then on, then off, etc. In Figure 7, the bottom line shows a “lag time,” or interval when the wave is at rest, before it resumes its upward-moving cycle.

Figure 7: Wave Lag Time

Figure 8 shows two waves in succession. Here, the “lag time” or rest (or pause) interval between the waves is easily seen. (The trough of the wave has been truncated.)

Figure 8: Two Waves

How close the waves are to each other—along with the lag time between each wave—represents the frequencies that you're creating. For example, say you want the frequency 35 Hz. This means that in your PMF machine, the electrical current pulses the magnetic field on and off 35 times a second. For 2127 Hz, the magnetic field is pulsed on and off 2127 times a second. In this second example, the flat lines between the waves would be much shorter than with 35 Hz. Theoretically, any frequency can be created by pulsing a magnetic field.

These pulsed magnetic fields, or PMFs, can produce highly therapeutic results. Some electromedical devices using PMFs will be discussed shortly.

THE ELECTROMAGNETIC BODY

Energy in Living Systems

Historically, most cultures have erroneously regarded the body solely as a mechanical and biochemical organism. However, every cell in the body is a transmitter and receiver of electromagnetic information. The following are examples of how animals, plants, and human beings receive, hold, transmit, and respond to EM fields:

- ◆ During migration, monarch butterflies, locusts, and even blindfolded birds navigate flawlessly. Salamanders and turtles also use magnetic fields to navigate. We now know that magnetite, a highly magnetic mineral, is found in the tissue and brains of insects, birds, reptiles, and amphibians.
- ◆ Bacteria use their magnetic sense to burrow deeper into the mud. We now know that magnetite is also present in bacteria and protozoa.
- ◆ Many kinds of fish are able to follow each other in organized formations (“schools”) due to the magnetic fields generated by the magnetite in their bodies.
- ◆ The whiskers of dogs, cats, and other animals are now recognized to function as antennas, due to their sensitivity to electromagnetic fields.
- ◆ In plants, the sharp points of leaves, as well as pine needles and the blades of some species of grass, act as antennas for electrical signals.
- ◆ Stingrays find food with their ability to detect normal, minute amounts of electrical discharge or magnetic fields emanating from their prey.
- ◆ Fish, dolphins, and whales use the Earth’s magnetic fields and sonar (sound) for navigation.
- ◆ The behavior of some animals has been used to forecast earthquakes for a long time. Cattle stampede, birds sing at the wrong time of day, mother cats move their kittens, snakes seek shelter. B. Blake Levitt writes: “It is now thought that [the animals] are reacting to changes in the Earth’s magnetic field, as well as to electrostatic charges in the air—long before the quake actually occurs or registers on even the most sensitive instruments.”³
- ◆ In humans, the sinuses, some other facial bones, the brain, and some bodily tissues contain magnetite.
- ◆ Melatonin, a hormone that (among many functions) helps induce sleep, is produced by the pineal gland only in darkness. We now know that the pineal, deep inside the brain in the skull, is exquisitely sensitive to light.

Both electric and magnetic fields applied to the body create biological changes. In his article “The Electrical Properties of Cancer Cells,”⁴ medical doctor Steve Haltiwanger describes how the body partly functions as a living electrical circuit. Various cells and tissues are conductors (allow for electron flow), insulators (inhibit electron flow), semiconductors (allow for electron flow in only one direction), capacitors (accumulate and store charge, later to release that charge), and so on. Cells transmit and receive energy, and each has its very own frequency with which it oscillates.

Not only is every cell in the body a transmitter and receiver of electromagnetic information, it is these various *electromagnetic frequencies that correspond to—and in fact, precede—biochemical functions*. For example, healthy cells oscillate at higher frequencies than do unhealthy cells such as cancer cells. The lower frequency of cancer both causes, and is reflected by, the aberrant biochemical reactions within the cell. Put another way, the biochemical differences between normal healthy cells and cancer cells correspond to the differences in the electrical properties of each. The same holds true for magnetic fields. Magnetic fields correspond to biological activity. A change in the magnetic field means a change in the cells, either beneficial or harmful.

Harmful Effects of EM Radiation and EM Fields

In the last century, medical doctor and stress pioneer Hans Selye observed that when bodily tissues are subjected to repeated, intense, negative input—whether chemical (environmental pollutants, adrenal “fight-or-flight” hormones) or mechanical pressure (bruising)—the body perceives it as stress. It responds by tightening the envelope of membranous fascia that surrounds the muscles. This, in turn, causes significant biochemical malfunctions, not the least of which is the disruption of the cell membrane. Other stressors that can disrupt cell integrity include the actual puncturing of the cell membrane, and microbial infection. Cell permeability for the proper materials is key. If glucose, other nutrients, and beneficial hormones cannot efficiently enter the cell, and if wastes cannot completely exit, pathogens proliferate and degenerative disease occurs.

To Selye’s list of stressors, I would add destructive EM radiation and EM fields. It has been known for decades that electrical fields can damage cells. B. Blake Levitt writes:

Direct current (DC) is the steady flow of electrons in one direction. Alternating current (AC) is an electron flow that changes strength and alters direction within a certain cycle;

the AC field collapses and reappears with its poles reversed every time the current changes direction. . . . Direct current creates a steady magnetic field. But with alternating current, each time the direction of the electrons is reversed, or flipped, a powerful magnetic field is created that fluctuates at the same frequency.⁵

Another reason these fields are dangerous is that the waves are *coherent*. Although the sun constantly transmits naturally-occurring radio frequencies, microwaves and other EM fields, this radiation is generally *diffuse*, whereas alternating current is *concentrated*. *Concentrated radiation is not natural*. For example, you need to purposely harness, focus, augment, and direct a bombardment of electrons to turn on a light bulb. These highly coherent, synthetic EM fields interfere with the body's signaling processes because they literally alter the DNA in harmful ways. Levitt points out:

The human race has never before in its evolutionary history been exposed to such fields on a continuous basis, and there are serious and mounting concerns about the effects not just on individuals but on our entire ecosystem. Since the turn of the [20th] century . . . we have surrounded ourselves with a veritable sea of artificially produced electromagnetic fields, all with a presumption of safety that . . . should never have been made.⁶

The harmful effects of some EM fields are many and varied. Jacqueline Krohn and colleagues point out numerous studies showing that electrical industry workers

have a higher risk of brain tumors. The incidence of childhood leukemia is higher in children who live near power lines that carry high voltage. Power-line exposure has also been associated with an increased incidence of suicide.

These studies support the hypothesis that ELF [extremely low frequencies] act as a cancer promoter. ELF fields interact with the cell membrane and can affect hormones, calcium exchange, and tissue growth. It is postulated that the ELFs suppress the production of melatonin, a cancer inhibitor, by the pineal gland.⁷

The effects of ELF fields is more than mere "postulation," as other researchers have corroborated. In *Electromagnetic Man: Health and Hazard in the Electrical Environment*, the authors cite formal published studies

linking the following maladies to extremely low frequency, electromagnetic fields:

- ◆ Allergies
- ◆ Autoimmune disorders such as lupus erythematosus and multiple sclerosis
- ◆ Birth defects, lowered fertility, miscarriages and pregnancy problems, including stillborn children
- ◆ Blood sugar disorders
- ◆ Cancers, including brain tumors and leukemia
- ◆ Digestive problems, including poor absorption of food, leaky gut, nausea and vomiting
- ◆ Emotional disturbances: anxiety, mood changes, panic attacks and a higher percentage of suicides
- ◆ Ear problems, including tinnitus
- ◆ Eyestrain and headaches
- ◆ Fatigue and sleep disturbances
- ◆ Heart attacks and other cardiovascular issues
- ◆ Hormonal abnormalities, including adrenal stress
- ◆ Immune malfunction and an increase in infections
- ◆ Nervous system disorders, including confusion, convulsions, dizziness, hyperactivity, and memory loss
- ◆ Respiratory ailments
- ◆ Skin problems, such as burning, rashes, tingling, pain
- ◆ Stress increase and intolerance⁸

The damage from harmful EM radiation also depends on its nearness to a person, animal, or plant. A *milligauss* is a unit of measurement of the strength of an electromagnetic field. According to tables from the Environmental Protection Agency reprinted in Levitt's book, a blender from six inches away emits between 30 and 100 milligauss; an electric can opener six inches away emits between 500 and 1500 milligauss; a hair dryer six inches away emits between 1 and 700 milligauss; and a ceiling fan twelve inches away emits between 3 and 50 milligauss.⁹ Some sources maintain that even 2 milligauss is enough to disrupt a person's biological functions, and that the absolute maximum emission a person can safely absorb is only 1 milligauss. This is why there's a high rate of illness among people living near major power lines, cell phone towers, electrical generators, and similar disruptors.

Healing Effects of EM Radiation and EM Fields

Considering how much artificially created, non-beneficial EM radiation surrounds us, alongside the triggers of poor diet, pathogens and chemical pollutants, it's not surprising that so many people are ill. The good news is, if frequencies can harm, they can also be used to heal. Cells have the ability to positively and healthfully respond to minute electromagnetic stimulus as long as certain criteria are met. The stimulus must be from the correct region of the EM spectrum. It must be further refined (if necessary) to an exact frequency, or combination of frequencies, on that EM band. It must be the correct intensity. It must have the correct shape wave or wave packet. It must be administered in the correct amounts. And it must be accurately and precisely aimed at the target.

In electronics, the term *inductive coupling* refers to the transfer of energy from one component to another through a shared magnetic field. An analogy of inductive coupling might be made with two tuning forks that are inherently tuned to the same pitch. One tuning fork is vibrating and the other is not. When the still tuning fork is placed next to the one that is vibrating, it too begins to vibrate.

In electromedicine, the response of living cells to some form of beneficial EM radiation is also known as inductive coupling. Once the EM fields inside a cell are exposed to the correct form and delivery system of EM radiation, the fields within the cell start to move and the corresponding biochemical responses are activated. This includes the movement of electrolytes through a cell membrane, the excretion of wastes, and the release of appropriate biochemicals.

Many beneficial electromedical devices use *pulsed magnetic fields* (or *PMF*). Pulsing a magnetic field elicits movement of the electromagnetic radiation (and its corresponding biochemical reactions) inside living tissues. It does more than induce movement, though. Because pulsing, by definition, means that there's an "off" period to the signal, it ensures that the human or animal receiving the signal does not become resistant to its effects. A good analogy is someone tapping your arm. At first you pay attention, but after awhile, as long as there's no danger, the body becomes impervious to the sensation so it can focus on other stimuli. This is one reason for the high rate of effectiveness of electromedical devices that utilize PMF for therapeutic purposes. Note that PMF is often called "PEMF." This can be confusing, as I'll discuss shortly (Sidebar, page 938).

Correctly employed, frequency therapies can increase cell energy, normalize membrane conductivity, lessen oxidative stress, reduce the amounts of inflammatory chemicals in the blood, improve protein synthesis, boost

feel-good endorphin levels, restore depleted adrenal function, and enhance immune function. The restoration of these metabolic processes lead to the regeneration of tissue as well as resistance to disease.

"Bigger is better" and "More is better" are prominent in the Western mindset, illustrated by the use of megadoses of toxic drugs and the routine practice of invasive "prophylactic" surgery. A more humane and biocompatible—but to some people, counterintuitive—edict, "Less is more," reflects what the body usually needs. The exquisite sensitivity of cells to electric, magnetic and electromagnetic fields explains why electromedical devices work—and why the more gentle ones work the best. Low power energies might not be easily perceived subjectively, but they're the most compatible with living systems precisely because of their lower power.

Electromedicine therapies may use many portions of the EM spectrum: electrical current, magnetism, visible light (either full spectrum or monochromatic wavelengths), far infrared (FIR), ultraviolet (UV), or heat (in the form of specific FIR wavelengths). In the following sections, I'll discuss some therapies that use various EM wavelengths and explore two uses of sound for therapeutic purposes.

ELECTROMEDICINE: ELECTRICAL CURRENT

TENS, the Establishment Standard

Most people are familiar with TENS—short for *Transcutaneous Electrical Nerve Stimulation*—which uses electrical current to control pain. The subject applies to the body, via electrodes, frequencies that can range from 1 Hz to 150 Hz (depending on the unit).

Conventional medicine admits to not understanding completely how TENS works. We do know that it hijacks the usual ways in which the many complex parts of the nervous system record, transmit, and manage pain. In fact, the nervous system is kept so abnormally unbalanced that *the transmission and perception of pain is blocked*. However, the actual cause of the pain is never addressed. Numbness, of course, only masks pain; it doesn't eliminate it.

To be fair, there are times that TENS does eliminate pain on a long-term or permanent basis. This may be due to the deliberate or accidental application of electrode patches on key acupuncture points, which can increase levels of the anti-aging, steroid hormone DHEA (dehydroepiandrosterone), which is produced by the body.

Nevertheless, TENS is not the best modality to use because suppressing body awareness doesn't give the body

a chance to correct itself. This explains why the effects of TENS sessions are usually temporary, limited to the period that the unit is active and attached to the body. Because TENS numbs nerve cells, many people who use it eventually become completely impervious to its signal—yet another reason for the limited success with TENS. A colleague observed that some people become addicted to using TENS units because its hyperstimulation of the muscles causes an overproduction of lactic acid, which causes more pain and induces people to use the unit more.

TENS units produce wave forms that are asymmetrical and irregular. In comparison, holistic electromedical devices produce symmetrical wave forms. The *amperage*—a measure of the *amount of electron flow* (or current)—is radically different with the two modalities as well. TENS operates on *milliamps*, at levels high enough to cause electrode burns on the skin. In contrast, medical devices that transmit electrical current and are genuinely healing to the body, emit *microamps*. One thousand microamps equal one milliamp.

The human body operates on microamps, not milliamps, and thus needs a gentler signal than what TENS is designed to provide (“less is more”). Truly therapeutic electromedical devices restore the body’s awareness—unlike TENS units, which prevent the proper signals from being transmitted. The body can heal only when the correct signals are transmitted in the correct way.

Avazzia™ Devices

Portable electromedical devices that emit small amounts of current in the microamp range have become popular in the past decade. One example is the hand-held biofeedback unit Avazzia™ (made by the company also known as Avazzia, which manufactures the Tennant Biomodulator® as well).

The predecessor of this style of instrument is the Scenar, an acronym for *Self-Controlled Energo Neuro Adaptive Regulator*. The Scenar was developed by Russian scientists in the 1970s to address an unexpected problem with their space program: the forced feeding of antibiotics to all cosmonauts, whether they were ill or well. If one crew member got sick and took antibiotics, all the crew members would end up with the drug in their system because in space, urine is recycled into the shared drinking water. Creating an electromedical device to treat cosmonauts in space would eliminate the “need” to administer antibiotics. This device, about the size of a remote control, was aptly nicknamed the “Star Trek Device” by the press.

According to Russian clinical studies, the Scenar proved effective in 80% of all cases. Of those cases, two-thirds enjoyed full recovery while the remainder

still experienced significant healing. Over fifty thousand successful outcomes were reported for circulatory, endocrine, respiratory, gastrointestinal, neurological, muscular, skeletal, genital, and urinary problems.

In 2004, Texas-based engineer Tim Smith developed an easier-to-use version of the Russian invention. Later, Dr. Jerry Tennant (also in Texas) used the Avazzia™ as the foundation of his private label units. The Avazzia™ and the Tennant Biomodulator® devices work similarly and are intended for comparable healing applications, although Dr. Tennant has stated that his units contain proprietary frequencies and some contain additional features.

All the Avazzia-made models, which are powered by two AA batteries, work on a biofeedback principle. Whether the instrument is moved across the body or resting still on a particular area, the biofeedback feature operates by sending out a series of precisely modulated electrical currents to the skin, measuring the body’s response, and then emitting different signals in response to the changes recorded by the skin. This continually customized, ever-changing approach ensures that the body doesn’t habituate or acclimate to the signal. The therapy is drug-free, non-invasive, safe, pain-free, and inexpensive (considering the number of conditions for which it can be used). In general, subjects not only feel positive effects after the first session, but the effects are long-lasting.

Many stressors can trigger the fight-or-flight response (sympathetic nervous system) and keep it on: pain, trauma, real or imagined danger, constant fear, an unbalanced pH, and even food allergies. With the sympathetic nervous system working overtime, the parasympathetic nervous system—which regulates digestion, sleep, hormone secretion and immunity—no longer functions properly. Being sympathetic-on for long periods creates chronic fatigue and eventually chronic disease. Once the body starts to malfunction, it becomes accustomed to existing in a pathological state and can remain stuck. Avazzia™ units stimulate the healing process by normalizing the sympathetic and the parasympathetic nervous systems. People report relief from pain, swelling and inflammation; faster a healing of wounds; improvement in circulation; and easier recovery from infections. The units are often used for muscle pain and injuries, but they’re also being clinically studied for the improvement or complete elimination of symptoms of arthritis, tendonitis, hypertension, hearing loss, and asthma.

The Avazzia™ stimulates a special type of nerve tissue called *C-fibers*. C-fibers, present in 85% of all nerves in the body, produce and release healing *neuropeptides*, small protein-like molecules that communicate with each other and are involved in many types of brain functions. One job

of these chemical messengers is to reestablish the body's normal physiology and catalyze healing. Neuropeptides can last for several hours, which means that the healing process continues after the treatment is over.

All of Avazzia's units balance the autonomic (automatic) nervous system. This allows the glands and immune cells to rest and recover. The gut is supported, too, so it absorbs nutrients more efficiently. And these units help restore voltage to the cells. A malfunctioning cell cannot metabolize properly. Once the voltage to organs and other bodily tissues is normalized, cellular toxins can be eliminated and water imbalances can be corrected.

To treat, the practitioner first asks the subject the location of the pain, discomfort or dysfunction. If there is clear symptomatology, the practitioner goes to the problem area. However, the spine and abdomen are also key areas to address, even though they might not seem to directly relate to the stated symptoms. Problem areas are perceived by the practitioner as a difference in the sound emitted by the device and by a feeling of "stickiness," a magnetic-like pull that prevents the unit from easily moving across the area. The session is over when the "drag" is eliminated and the client relaxes. Often, the skin around the treated area reddens due to increased circulation.

Avazzia™ units come with optional attachments that can treat on smaller skin areas, on acupuncture points, through hair, and wrapped around limbs. The devices are also FDA-cleared Class II, for symptomatic relief and management of chronic, intractable pain, and adjunctive treatment in the management of post-surgical and post-traumatic pain. Licensed health care practitioners may use it in their practice. However, it's not necessary to see a professional if you need treatment. Laypersons who want a unit can obtain a prescription from their physician.

Frequency Specific Microcurrent

Frequency Specific Microcurrent (FSM) was first used in the early 1900s by physicians and osteopaths in the form of equipment that delivered DC current. In 1987, the device used for FSM was developed by an engineer named Glen Smith. Eight years later, chiropractors Carolyn McMakin and George Douglas discovered some frequencies used in a 1920s electromedical device and began applying them in their practice.

FSM treats nerve, muscle and fascia pain by using frequencies ranging from 3 Hz to 970 Hz. Compared to a TENS unit, which overwhelms the system with easily felt current in the milliamp range, FSM is usually not perceived (although its effects are), as its output is in the

microamp range—imitating what's naturally produced by the body. FSM is painless, safe, non-invasive, and effective.

As with the other equipment discussed here that utilizes electrical current, FSM follows holistic principles. Its ability to alleviate or eliminate pain entirely is due to its restoration of cell function and not simply the masking of symptoms. For example, TENS decreases cell energy (ATP production) by about 50%, protein synthesis by 50%, and cell membrane transport by up to 40%. In contrast, with FSM (using fewer than 500 microamps and not milliamps), ATP production increases (rat studies show by 500%), as does amino acid transport into the cell. This aids in waste product removal and protein synthesis. Studies also suggest that FSM helps insulin bind with its receptor sites on cell membranes, and activates the secretion of collagen and other beneficial substances in and around living cells.

Unit sizes range from about 18" x 9.5" x 6.5" to the "home care" portable unit that's about the size of a large thick cell phone and is operated by one 9-volt battery. All come with various electrode attachments. The use of frequencies isn't regulated by the FDA (so is neither approved nor disallowed), but the devices that provide the current—the Precision Microcurrent machine and the FSM Auto Care and Sports Care unit—are permitted to be used in a medical setting, by prescription. The FDA has approved all microcurrent devices for sale in the category of TENS devices, despite the differences in amperage and biocompatibility of the two modalities.

Conditions suitable for this therapy include arthritis, chronic low back pain, fibromyalgia (especially associated with neck injury), diabetes-related and other neuropathic pains, and myofascial pain (from trigger points in the head, neck, face, and lower back). People with asthma, liver dysfunction, kidney stones, shingles, endometriosis, and irritable bowel syndrome also benefit, although Dr. McMakin reports, "Most cases of post herpetic neuralgia improve with five to six treatments but require the frequencies for scar tissue and inflammation in the nerves damaged by the virus."¹⁰ Practitioners know how difficult it can be to manage (let alone cure) fibromyalgia. After FSM treatments, people diagnosed with fibromyalgia no longer meet the diagnostic criteria for fibromyalgia as set by the American College of Rheumatology.

Injuries from accidents or surgeries, especially if treated within four hours, are found to yield reduced pain and greatly accelerated healing. Symptom relief includes reduced inflammation, increased range of motion, improved visceral organ function, and more manageable emotional states. There are frequencies for over 200 conditions, including inflammation, scar tissue, and even excess mineral deposits and toxicity.

“Body tissues,” says McMakin, “respond to frequencies through the principles of biological resonance, responding to the signals like a radio responds to frequencies from a radio station.”¹¹ Because there’s no biofeedback component to this technology—just a needle on the instrument indicating whether or not the current is flowing—the operator must be trained to recognize, diagnose and treat the most common complaints that involve pain.

Laypersons are not permitted to receiving training in FSM or purchase units, so the therapy is available only from licensed health practitioners. However, some highly sensitive people who don’t respond well to other electrical current units tolerate FSM—probably because the power on FSM equipment is much lower than on other units, and therefore the signal isn’t strong enough to stimulate sensory nerves. Thus FSM may be the optimal treatment for some people, despite dependence on a practitioner.

ELECTROMEDICINE: MAGNETIC FIELDS

Stationary Magnetic Fields

Although many professionals in mainstream science and allopathic medicine do their best to malign magnet therapy, their open-minded colleagues are finding that one or more magnets, properly placed, provide considerable benefits. The magnets come in many forms: as tiny round dots of about 3mm, intended for leaving on painful areas and on acupuncture points (attached to the body with adhesive strips); built into cloth straps for the back, elbow, knee or wrist; as shoe inserts; in pillows and mattresses; and in bracelets, necklaces and other jewelry. Loose magnets (often square) of all sizes are placed on the body when the person is resting, and even configured to treat water. The magnets are made of metal, ceramic, or rare earth. It’s best to tape (or place) magnets on the bare skin; otherwise, they’ll have no effect. Even with a very strong magnet, the field is lost when it’s even a foot (about one-third of a meter) away from the body.

We commonly refer to the two poles of a magnet as the “north” and “south” poles. This has understandably caused confusion for some people, write the authors of *Magnet Therapy*:

All magnets have both a north and south pole by definition. These can be readily identified by allowing the magnet to swing freely in a horizontal plane, and determining which ends point north, or by seeing which end of the compass is attracted to it. “Positive” and “negative” are also misleading and inaccurate terms that

originated with the British Admiralty’s efforts to improve the compass. They had created a freely floating magnetic needle mounted over a card containing markings to indicate gradations in direction based on the orientation of the needle when it pointed to the geographical North Pole. The end of the needle that pointed north was called the north or positive pole of the magnet. Actually, it should have been called the “north-seeking” pole, which would have meant that it was actually negative rather than positive. By the time this error was recognized, the terminology had become so ingrained that it was too late to correct it. [emphasis added]¹²

In the last decade or so, double-blind studies have been conducted on people afflicted by degenerative joints and discs, arthritis, polio, sports injuries, muscle and tendon tears, and other conditions. Compared to control groups who received fake magnets, those who were given real ones enjoyed a significant reduction or total elimination of inflammation and pain, along with an increase in cellular oxygen. These results aren’t due to magic: a strategically placed magnet can increase levels of beta-endorphins, the body’s natural painkillers. Also, as described by one team of researchers, “acute static magnetic field (SMF) exposure can have a modulatory influence on the microvasculature, acting to normalize vascular function.”¹³ In other words, the microvasculature—otherwise known as the *microcirculation* (as discussed in the BEMER® section on page 934)—relaxes. Whenever the microcirculation relaxes, there’s a reduction of inflammation and pain.

A 2008 experiment, “Acute exposure to a moderate strength static magnetic field reduces edema formation in rats,” illustrated this principle very well. We can’t attribute the results of magnet therapy to a placebo effect because the subjects of the study were rats. The animals were injected with inflammatory agents that caused swelling, water retention, redness, heat, and pain. (One of the inflammatory agents was histamine, which contracts most smooth muscle tissue and is often produced by the body in response to irritants. The other agent was carrageenan, a manufactured artificial extract from seaweed that causes extreme allergic responses but which the food industry nevertheless insists on including in thousands of products.) The application of magnets produced a 20%–50% reduction of symptoms. This same response occurs in humans as well, although the researchers did point out that the benefits are much more likely to occur if magnets are applied within 30 minutes of the inflammatory response. However, magnets did lower inflammation more efficiently than ice.¹⁴ Other

PROPERTIES OF MAGNETS	
North Pole	South Pole
<i>Calms, Soothes and Sedates</i>	<i>Energizes, Excites and Activates</i>
Slows growth, cellular activity and maturation	Stimulates growth, cellular activity and maturation
Controls infection by slowing microbial reproduction	Promotes infection by stimulating microbial reproduction
Increases alkalinity; reduces acidity	Increases acidity; reduces alkalinity
Can relieve or entirely eliminate pain (which is believed to be a condition of too much systemic acidic waste)	May increase pain (which is believed to be a condition of too much systemic acidic waste)
Reduces inflammation	May increase inflammation
Slows metabolism	Speeds metabolism
Stops tumor growth	Stimulates tumor growth
Causes muscle contraction	Allows muscle relaxation
Stops bleeding	Increases bleeding
Slows cardiac activity and pulse	Speeds cardiac activity and pulse
Increases blood pressure	Decreases blood pressure
Encourages sleepiness	Encourages wakefulness

Figure 10: Properties of magnets

favorable studies include “Randomised controlled trial of magnetic bracelets for relieving pain in osteoarthritis of the hip and knee,”¹⁵ “Effects of static magnets on chronic knee pain and physical function: a double-blind study,”¹⁶ and “Response of pain to static magnetic fields in postpolio patients: A double-blind pilot study.”¹⁷

Because magnetic therapy is a small field, there’s no standard for magnet intensity, which is measured in *gauss* (or the newer term, *tesla*; a single tesla equals 10,000 gauss). A minimum strength of 500 gauss is recommended for chronic illnesses. Magnets are generally classified:

- ◆ Weak, less than 10 gauss
- ◆ Medium, 10–500 gauss
- ◆ Strong, 500–2000 gauss
- ◆ Very Strong, over 2000 gauss

Generally, the two poles of a magnet have opposite properties (see Figure 10). People who need pain relief and tissue restoration use the north pole side. The south pole, which has been documented to cause tumor growth, can also be used—albeit very carefully, and only for conditions of very low energy such as numbness, weak muscles or paralysis, where infection is not a prominent factor. The south pole is also useful for farmers. Exposing the dampened seeds overnight to south pole energy will cause them to rapidly sprout, and the next morning there will be plants to put into the earth. Always remember, though, that south pole energy will stimulate cancer cells to grow. This is why the north pole is generally much safer to use. If both fields are equally strong on a magnet (which they might be, depending on the magnet’s configuration),

the magnet can be safely used for about a week, and resumed after a brief interval. Consult a professional. The three major placements for magnets are at the area of pain, the area of *referred* pain (which is away from the apparent source of the pain), and acupuncture points.

We know *what* the characteristics of the two poles are. But *how* do they work? The *Magnet Therapy* authors write that in a static magnetic field,

there is a constant invisible motion of ions as they pass in and out of cells, and a good reason to believe that this is where “the action” is—in both static and electromagnetic fields . . .

An ion is an atom or group of atoms with a positive or negative charge. Sodium, calcium, potassium, and magnesium are positive; chloride and phosphate are negative. Like magnets, opposite ions are attracted to each other, which is why we have, for example, sodium chloride, or salt. Positive ions like potassium and calcium compete with sodium to get hooked up to something negative. Electrical activity results because of the motion of these charged particles, which in turn are affected by magnetic fields.

. . . The ability of magnetic fields to provide so many diverse clinical benefits suggests their *modus operandi* is at a very basic level of cellular function. This appears to be confirmed by research studies demonstrating that they alter the dynamics of calcium, potassium, sodium, and other ion transport across cell membranes. In turn, these can have profound effects on essential enzyme systems that influence ATP [adenosine

triphosphate] formation [the source of energy for all cellular activities]. . . . both electromagnetic and permanent magnet fields can influence ATP activities . . .¹⁸

Our knowledge of electricity and electromagnetism suggests that more functions may be involved, but this is a good start.

According to some sources, the low or moderate intensity magnets, compared to the highest strength magnets, work better. Often the high strength magnets don't even work at all. This follows the "less is more" principle of biocompatible energies.

Now that we understand the basics of static magnets, let's examine more dynamic equipment that uses magnets for therapeutic purposes.

Oscillating Magnetic Fields: Dr. Henry Lai's Malaria Treatment

Up to 2.7 million people die of malaria every year—one million of whom are children—according to the World Health Organization. In addition to fever, head and joint aches and shivering, malaria often causes seizures and death, if infected blood cells block the blood vessels leading to the brain. *Plasmodium falciparum*, the parasite that causes malaria, has become increasingly resistant to pharmaceuticals. However, bioengineering professor Henry Lai and three University of Washington colleagues have discovered a way to eliminate malaria using very weak, rotating magnetic fields.

Dr. Lai's treatment is simple and elegant. *Plasmodium* becomes weak and dies when exposed to oscillating magnetic fields. While the death throes of the parasite may sound similar to what happens to other microorganisms when exposed to frequencies emitted by rife-style frequency devices, in this case, the magnetic field does not emit variable frequencies.

The principle behind Lai's magnetic device is based on the parasite's unique metabolism. After the person is bitten by the mosquito that carries *Plasmodium*, the parasite first penetrates the liver and then re-enters the bloodstream to feed off the hemoglobin in red blood cells. *Plasmodium* eats the globin portion of the hemoglobin molecule, but it lacks the enzyme needed to break down the iron-containing heme in the hemoglobin. Because free heme molecules can cause membrane damage, *Plasmodium* protects itself by arranging the heme molecules into long stacks—like "tiny bar magnets."¹⁹ Lai believes that the oscillating magnetic field affects the parasite in two possible ways. Either the heme molecules cannot form stacks and are free to move in the parasite and cause harm. Or, the stacks spin as a

result of the magnetic field and mechanically injure the parasite. Both scenarios cause damage and death to the parasite. Although there is only a minute amount of iron in a heme stack, it is enough to be affected by magnetic fields.

Some experiments show 33% to 70% fewer parasites in exposed than unexposed samples, indicating a significant slowing of the parasite's metabolic functions and thus sufficient to manage the disease. It's unlikely, says Lai, that *Plasmodium* would develop a resistance to magnetic fields. He also believes this treatment will not harm the human host: "It's a very weak magnetic field, just a little stronger than the Earth's. The difference is that it is oscillating."²⁰ "I think," he adds, "it should be safe for short-term (hours) exposure."²¹ Other researchers have continued this line of research, such as in the 2018 article, "Growth of *Plasmodium falciparum* in response to a rotating magnetic field."²² Results are promising.

Magnetic Vortex: the Magnetex®

Much of the available research in magnetic therapy consists of studies using a single pole of stationary magnets. However, as we have just seen with Dr. Henry Lai's technology, magnetism combined with movement can be extraordinarily powerful. In a 2012 article, "Rotating Magnets Produce a Prompt Analgesia Effect in Rats," the authors stated that while pain relief can be obtained from a static magnetic field, a rotating magnetic field (RMF) produces more immediate and long-lasting results. The "spin-magnetic field generator" that the experimenters designed was basically a disc holding magnetic bars, which was attached to a motor and spun rapidly. The authors suggested further exploration of this and similar equipment to develop "a non-pharmacological approach of anesthesia."²³

It's unknown if research on RMFs was continued, as it can take several years for an article to be published. However, given the promise of magnet therapy in general, it's not surprising that in 2012, the Magnetex® was developed. The 4-pound hand-held unit derives its power from a magnetic vortex created by four rapidly spinning neodymium magnets. The Magnetex® is reported to do one thing only: pull dangerous, toxic debris from the cells and tissues of the body. This includes biofilms (the dense sticky mass that houses and protects bacteria, fungi and parasites); wastes produced by the body (such as hormones and acids); heavy metals; microbial wastes; and even nanoparticles. Once cell-clogging material is pulled into the bloodstream for removal by the body, the cells can metabolize properly, eliminate waste, and function again.

People report using the Magnetex® quite successfully for:

- ◆ Allergies and chemical sensitivities
- ◆ Anxiety, brain fog, poor concentration / memory
- ◆ Digestive issues
- ◆ Fatigue
- ◆ Headaches and migraines
- ◆ Lung and sinus congestion
- ◆ Pain in back, joints, and muscles
- ◆ Skin problems

The flat, 4.25" diameter head of the Magnetex® is lightly placed on or just over the area that needs attention (the field extends about one foot, or one-third meter, after it's turned on). Some people rest the equipment on the liver or abdominal region for detoxification purposes, although a more common use is for pain on areas such as an arthritic hand, a knee joint, the foot, or the neck. To address the back, it's helpful to have someone else run the unit down the spine, stopping at the neck/shoulder area, middle back, or lower back for perhaps 30 seconds to allow the vibrations from the unit to do their job. The Magnetex® imparts strong continual pulsations—reminiscent of the vibrations from a massager—that are relieving and pleasant from a mechanical standpoint. However, its deeper work and greater value are from the magnetic vortex that draws out debris from the tissues.

Before and after live blood analysis has shown that after a 15-minute session, the bloodstream is littered with waste. Rather than becoming alarmed, we should remember that the unit is merely doing its job, and that the body will eliminate the debris. The company suggests drinking plenty of water to help flush the wastes from the system, either immediately before or after the session.

Magnetex® users typically report feeling mentally clearer, more flexible, more relaxed, and freer from pain. One astonished practitioner reported that after administering two 10-minute sessions each to two elderly clients (on the neck near the ears), the clients threw away their hearing aids because they no longer needed them.

With this machine, simple in appearance and easy to use with its one setting—an “on-off” switch—it's tempting to overdo the amount of time spent in a single session. The company is careful to warn customers to avoid the Western mindset “more is better.” In this case, more is definitely *not* better. In fact, a typical session should be fewer than 15 minutes; and four shorter sessions (for instance, 10 minutes each) are preferable to three longer sessions (for instance, 15 minutes each). You don't want to overload the system. Generally, the Magnetex® provides such rapid results that more time isn't necessary.

As with all instruments that emit a strong magnetic field, don't place the Magnetex® directly over the heart. This unit is experimental, customers use it at their own risk, and no medical claims are being made, states the company website. So far, though, results have been impressive. “As far as we know, our use of spinning both positive and negative poles, along with the added feature of [mechanical] vibration, is unique in the energy medicine arena. We have seen both rapid and profound results that we believe can be attributed to the torroidal energy field that the Magnetex® creates.”²⁴ Knowing that waste adversely affects cell function—and thus can cause or contribute to any illness—it's easy to understand why customers may achieve dramatic results.

In December of 2020, inoculations (misleadingly labeled “Covid vaccines”) began to be distributed worldwide. Some medical researchers, viewing these experimental concoctions under a microscope, observed technology they called “nanobots.” The researchers also saw paramagnetic particles that look and act like graphene. (Consisting of thin layers of carbon in a lattice, graphene is used in biocircuitry that's powered by artificial intelligence.) Because these non-vaccine technologies possess organizing, transmitting and receiving capabilities, they can be used for data recording, tracking, and even body and brain manipulation. In addition, alarmed people began reporting that their bodies became magnetic after being jabbed (magnets actually gripped the skin!). Preliminary research shows that the Magnetex® may scramble or deactivate the programming, and break up the structure, of these highly invasive neuromodulation technologies.

Pulsed Magnetic Fields: the BEMER®

Compared to some electromedical equipment, BEMER®—an acronym for *Bio-Electro-Magnetic-Energy-Regulation*—is simple to use and operate. It consists of a mat (containing coils) on which subjects lie; a small control box connected to the mat that plugs into the wall, with various settings that regulate the intensity of the device's signal; and some optional accessories such as a small applicator for concentrated treatment over a small area. Approved for medical purposes in the European Union, this patented Swiss-made device uses a pulsed magnetic field to improve circulation in the tiny blood vessels.

Those accustomed to thinking of the heart and larger blood vessels as “the circulatory system” might not regard the BEMER's function as impressive or unique. However, three-quarters of the body's circulatory apparatus is comprised of blood vessels that are much smaller than arteries and veins—a vast network whose flow is called the *microcirculation*. Arteries carry blood directly away from the heart and veins carry blood directly back to

it, but it's the smaller vessels that do the major work. *Capillaries*, whose walls are just one cell thick, are next to every cell in the body. When placed end to end, the capillaries in just one body would circle the Earth twice. *Arterioles*, smaller than arteries, carry oxygenated blood from the organ tissues to the capillaries. *Venules*, which are small and quite narrow, receive blood from capillary beds and eventually form the larger veins. Combined, these tiny blood vessels deliver oxygen and nutrients to the cells and remove carbon dioxide and other wastes. Each day, the red blood cells supply and clean an area of more than 75,000 miles (120,000 kilometers).

The microcirculation also controls the distribution of blood to and within the body's organs and tissues. This heavily impacts blood pressure as well as swelling, which is the body's response to inflammation. Properly functioning microcirculation ensures that blood flows to areas that need it the most, such as muscles during physical exertion or the brain during intensive mental processing. Note that the tiny microcirculation channels can accommodate only one red blood cell at a time. The flow of red blood cells is regulated not by pumping, but by the pressure of fluids moving through semipermeable membranes. Even with the *macro*circulation working well, if the *micro*circulation is not—if the tiny vessel walls are not relaxed enough to release the red blood cells under pressure—then the red blood cells won't reach where they're needed and circulation will halt, stagnating the tissues and encouraging the development of degenerative conditions and infectious diseases.

Degeneration and disease equal pain—and this is when we most strongly feel the effects of malfunctioning microcirculation. The authors of *Magnet Therapy* explain the connection between pain, capillary malfunction, and electromedical therapy that restores capillary function.

Capillaries are key to understanding how magnets relieve pain via increased blood flow. The capillaries, far narrower than arteries or veins, are the regulators of blood flow. *They are turned off until there is a need for carrying oxygen in and carbon dioxide and other waste products out. Then they are activated.* Blood flow in tissue is governed by how many capillaries are flowing, just as water use in your home depends on how many faucets are opened. When their walls are relaxed, they allow the blood to flow more freely. . . .

Capillary action helps pain in another way: by speeding up fluid exchange in injured tissue, thereby flushing away the pain and inflammation chemistry at the site. These include unwanted byproducts such as lactic acid, which are major

causes of pain and inflammation. . . . In most cases, this stepping up of the metabolism not only stops pain but also stimulates the body to heal faster since *the movement of oxygen and other nutrients to the cells will increase as the capillary blood flow continues.* [emphasis added]²⁵

What “turns off” the microcirculation? Contributors include stress, poor diet, infection, inadequate sleep, and toxins—all of which unbalance blood glucose and electrolyte levels, and on a subtler level, the cellular electromagnetic charge—thus preventing red blood cells from easily diffusing out of the tiny blood vessel walls to reach their intended locations. By increasing the cellular charge, BEMER® improves circulation, oxygenation and hence, function of muscles, organs, glands, and even bone. Among many conditions, BEMER® addresses:

- ◆ Arthritis
- ◆ Burns
- ◆ Cardiovascular dysfunction (including blood clots)
- ◆ Fatigue (chronic or acute)
- ◆ Headaches and migraines
- ◆ Immunity (greater protection from infections)
- ◆ Insomnia
- ◆ Metabolic disorders
- ◆ Muscle injuries and sprains
- ◆ Nerve damage
- ◆ Respiratory disorders, including asthma
- ◆ Skeletal system: bone fractures and even osteoporosis
- ◆ Swelling
- ◆ Wounds, cuts, scrapes, skin rashes

The BEMER's settings range from low to moderate to high intensities. If you're frail or recovering from a severe or chronic illness, start slowly on the lowest setting and gradually increase the signal intensity as your energy improves. Only athletes and the very healthy should use the advanced BEMER® settings, which emit the most powerful signals. The unit times the treatments (ten minutes average) and shuts itself off when the sessions are finished. One setting will run overnight and help with sleep. Most people feel very relaxed from a session. They may feel a slight tingling as blood flow improves. Dogs and other small pets generally enjoy lying on the mats. There's also a BEMER® blanket for horses.

Clearly, the health of our microcirculation is critical. “Microcirculatory effects of pulsed electromagnetic fields” appeared in a 2004 issue of *Journal of Orthopaedic Research*.²⁶ About fifty favorable scientific studies specifically about BEMER® therapy have been published. One article, appearing in a 2016 issue of *PLoS One*—“BEMER Electromagnetic Field Therapy Reduces Cancer Cell Radioresistance by Enhanced ROS Formation and Induced DNA Damage”²⁷ reported that BEMER’s normalization of microcirculation disrupts the metabolic pathways of cancerous tissue. The goal of the authors was to make cancer cells more receptive to toxic chemicals, but people choosing holistic protocols for cancer also benefit from BEMER®. This title alone, in a 2013 issue of *Journal of Complementary and Integrative Medicine*, provides an informative summary: “The effects of the ‘physical BEMER® vascular therapy,’ a method for the physical stimulation of the vasomotion of precapillary microvessels in case of impaired microcirculation, on sleep, pain and quality of life of patients with different clinical pictures on the basis of three scientifically validated scales.”²⁸

People may be discouraged by the high price of the BEMER®, which is distributed via a multilevel marketing system. However, a number of less costly mats are now appearing on the market that report circulation benefits similar to those of the BEMER®. We shall see, in time, how true those reports are.

Pulsed Magnetic Fields: the ONDAMED®

The ONDAMED®, developed by German electronics engineer Rolf Binder, uses a pulsed magnetic field that conveys frequencies. The machine consists of the base (18.5" x 14" x 4"), which weighs about 25 pounds in its heavy-duty case, and various applicators that are placed on the body or held. The software introduces various frequency patterns, times and intensities. Frequencies range from 0.1 Hz to 32,000 Hz. The pulsed magnetic field emitted by the unit covers a small but focused area. This unit is sold only to health professionals and requires some training to use; but the principles of how it works are useful to know as they apply to other equipment.

To find which protocols to use, the practitioner places an applicator around the client’s neck while holding the subject’s wrist and scrolling the machine through a range of programs. When a frequency is emitted that the body may need, a sudden change in the radial (circulatory) pulse occurs. The change in the subject’s pulse can feel like excitation (jumping or throbbing) or weakening (slower, less obvious). (This physiological response, known as the Vascular Autonomic Signal or VAS, was discovered by medical doctor Paul Nogier in 1966.) The “biofeedback”

aspect of the ONDAMED® is the person’s bodily response to the unit’s emissions. The practitioner chooses the top two patterns that caused the strongest reaction, and which will thus have the most therapeutic value. VAS is also used to find the optimal placement for treatment.

Not everyone’s pulse completely normalizes for the duration of treatment. For future tests, other areas and frequency patterns may be more useful. No more than two frequencies are administered at one time during therapy so that the body isn’t confused by too many signals.

The company isn’t allowed to make medical claims for the equipment, but does state that the biofeedback has worked well for pain management, stress relief, detoxification (waste elimination and nutrient absorption), reduction of addictive patterns (such as smoking), and weight management. People suffering from allergies, arthritis, inflammation, lymph and hormonal problems, infections, and pain report that their symptoms subside or are completely eliminated. The ONDAMED® is popular with smokers to stop nicotine addiction: a 95% effectiveness rate is reported, in an average of one to three sessions. People with other health conditions generally notice improvement in five sessions, although some people require more. The range is generally one to 20 sessions.

How does the equipment work? Medical doctor Wolf-Dieter Kessler relays a dialogue about ONDAMED® with physics professor J.B. Sharma:

Each organ has specific natural frequencies corresponding to its healthy state, to which it resonates if driven by an appropriate external frequency. . . . look at the body and its constituent parts as oscillators. In a healthy body, the ensemble of the oscillators “vibrate” in harmony with each other. . . . Under this model, disease may then be understood as a departure from a healthy synchronous vibration. The [diseased] parts of the body . . . display a lower energy or a chaotic, asynchronous vibration. The difference between an optimally functioning state and a diseased state in the human body is detectable by Nogier’s pulse feedback method . . . [during which] a very small shock is created to the cardiovascular system when a specific frequency hits a diseased site, which then evokes a tempering or “tuning” of the oscillating components through resonance. . . . The asynchronously vibrating components of the diseased body will resonate harmoniously for a brief moment when hit by the proper frequency. . . . Further treatment with the appropriate frequencies would then bring all components

back into synchronous vibration with the tendency to maintain that state of higher order.²⁹

We know that deviations from the frequencies of healthy tissue indicate energy blockages that can then lead to health problems. On the biochemical level, blockage of an area is synonymous with a static field, characterized by accumulated acids (excess hydrogen ions, or H⁺), which block the transfer of impulses the body needs for the smooth flow of information. We know that superimposing one magnetic field on another induces the flow of electrons. When the ONDAMED[®] introduces specific electromagnetic impulses into the body, the movement of electrons is induced to the organs, glands, muscles, vessels, bones, nerves, or other tissues that require a more efficient flow of information.

The ONDAMED[®] is approved by the Institutional Review Board as a non-invasive secondary therapeutic device for the alleviation of pain, discomfort, and general malaise in the treatment of various disorders. The inventor, although pleased by the reports of success, nonetheless emphasizes, “It’s very important to get the body working by itself. You don’t want to get the body dependent on a drug—or the machine, for that matter.”³⁰

ELECTROMEDICINE: PLASMA RIFE THERAPY

In 1933, the resolution power of microscopes wasn’t very high and electron microscopes were still being developed. This led American scientist Royal Raymond Rife—who wanted to examine microorganisms as small as viruses in their living state—to invent the Universal Microscope. Rife’s microscope had remarkable depth of field, and its clarity rivaled that of even later electron microscopes. The Universal Microscope held great promise in finding cures for diseases, because if you can see how living organisms respond to stimuli, you have a better chance of finding a way to destroy them.

As it turned out, the “stimuli” from Rife consisted of his next invention—the Rife Ray, an electromedical device that cured cancer and other serious diseases. Successfully used by some of the most prominent physicians of his time, the non-invasive and effective Rife Ray was driven underground, banned by the American Medical Association and FDA because it was far more effective than toxic drugs. Only in the last couple of decades has Rife’s equipment emerged again for therapeutic purposes, albeit in an altered form.

The principle of the Rife Ray’s operation was elegant. If a virus or bacterium began to oscillate in response to

a particular frequency that Rife aimed at it—and then it grew weak or destabilized—Rife knew that he had found the *resonant frequency* of the pathogen, or its *mortal oscillatory rate* (MOR). “Any object has a certain natural or resonant frequency,” explains James L. Oschman.

Strike it, bump it, pluck it, or heat it, and it will tend to vibrate at a specific frequency. This applies to a bone, a piece of wood, a molecule, an electron, or a musical instrument. . . . In the living body, each electron, atom, chemical bond, molecule, cell, tissue, organ (and the body as a whole) has its own vibratory character. . . . In terms of vibrations, the human body can be compared to a symphony orchestra. Each molecule corresponds to a particular instrument. Each bend, rotation, or stretch of a chemical bond has a certain resonant frequency, and will give off certain “notes” if it is energized. Since molecules, water, and dissolved ions are constantly bumping into each other at body temperature, all parts are constantly jiggling and absorbing and emitting energy. . . . When two objects have similar natural frequencies, they can interact without touching; their vibrations can become coupled or entrained. For electromagnetic interactions between molecules, the word “resonance” is used more often than entrainment. In the older literature you will find the term “sympathetic vibrations.”³¹

The destruction of a pathogen has often been compared to the cliché of a soprano singing a pure, focused tone that shatters a glass whose resonant frequency matches that particular tone. While this glass-shattering phenomenon is genuine, using sound to describe how Rife’s equipment worked is an imprecise analogy. A sound wave is a mechanical motion. But Rife’s units could affect microorganisms through many inches of concrete, which can absorb mechanical motion (and thus prevent it from being transferred elsewhere). Therefore, something else was responsible for the destruction of pathogens: *electroporation*, the abnormal permeability of either a microbial cell wall or a human or animal cell membrane. The permeability is most pronounced during an energy transfer, or *when there’s a match in wavelength* (frequency). The Rife Ray—through *resonance*, or the matching of wavelengths—transferred energy to the microbial cell walls. This increase in energy disturbed the electrical charge of the pathogens, causing a *change in shape and pattern*, which compromised their structural integrity. Due to this electroporation, the pathogens began to destabilize.

Which Is It? PMF? PEMF? Or Something Else?

Good electromedical devices, no matter what the delivery system, affect the body in similar ways. To varying degrees (depending on the delivery system), they increase electrical charge and balance the electromagnetic fields in the tissues. Physiologically, this can translate into ion transport, increased blood and lymph flow, and more.

Few electromedical devices cause as much confusion as those that employ a pulsed magnetic field (PMF) for healing, because PMF may be called by other names: “low field magnetic stimulation” (LFMS), “pulsed electric field” (PEF), “electricity-generated magnetic field” (EGMF), and most commonly, “pulsed electromagnetic field” (PEMF). Many researchers use these terms interchangeably. So do manufacturers of PMF equipment. These alternate terms can be misleading, because the way in which the machine delivers its signals appears to be conflated with what’s happening in the body that receives these signals.

Machines that emit a *pulsed magnetic field (PMF)* do this in one of two ways: either with a Helmholtz (or similar) coil that contains two specially aligned electromagnets, or with a wire that conveys electrons when electricity flows through it. Both of these methods provide a generalized magnetic field. To *pulse* the field, a frequency generator is used, which creates a frequency-specific signal. The speed of the pulse determines the frequency. For example, to create 35 Hz, the electrical current switches on and off 35 times a second. To create 2127 Hz, the current switches on and off 2127 times a second, and so on. Any frequency can be created by pulsing a magnetic field. Once the body receives these frequencies, movement and healing in the tissues is induced.

A journal article on healing bone fractures states: “Electromagnetic fields (EMFs) have shown a promising potential for [healing bone fractures]. . . the most important of them are direct current, capacitive coupling, inductive coupling (pulsed EMF), static and combined magnetic fields.”³² Another article states: “PEMF can be applied to biological tissues [via] . . . inductive coupling. . . the magnetic field produces an electric field that, in turn, produces a current in the conductive tissues of the body . . .”³³ The PEMF in the title apparently refers to *all* possible fields in the electromagnetic spectrum that can be created with many types of electromedical equipment.

Ask the manufacturer of your electromedical device exactly how it works: what the machine emits, and how it affects your body. Some people do better with one delivery system than another.

How were the resonances conveyed? Royal Rife’s ray equipment very likely incorporated the inventions of several other scientists—Albert Abrams’s Oscilloclast, Nikola Tesla’s plasma lamp and Georges Lakhovsky’s Multi-Wave Oscillator. However, the Rife Ray operated on different principles. It delivered frequencies in the radio frequency (RF) range by sending an electrical current through a tube filled with noble gases (mostly argon and neon). The gases would light up the tube, and the frequencies were emitted as EM radiation. It was the *EM wave*, rather than the luminescence from the light, that disabled or killed the pathogens.

Some laypersons and even equipment manufacturers erroneously refer to Rife’s technology as PEMF (short for “pulsed electromagnetic field”). But although a PEMF is being used to *create* the plasma in the noble gas-filled tube, it’s the *photonic field emitted by the plasma*, which entrains the cell membranes, that creates the desirable effects. Note, too, that plasma has some attributes that are different from those of an EM field—such as the ability of photonic emissions to pass through solid objects—so *longitudinal* or *scalar* waves were likely also present.

Rife discovered the resonant frequencies for cancer, typhus, *E. coli*, and other microorganisms. People given “terminal” diagnoses by their doctors would often become well when exposed to the Rife Ray. A pathogen’s MOR frequency administered at a low power level is harmful to the pathogen, but it doesn’t harm a larger animal or human host because the host is larger, and has a much more complex structure, than a microorganism.

Some modern frequency devices contain plasma tubes filled with noble gases, while others are equipped with hand-held, cylindrical metal electrodes or electrode patches that deliver the signal into the body via electrical current (which has entirely different properties than radiant plasma). While most plasma tubes are freestanding, one unit is equipped with long hand-held glass rods. Since Rife’s time, FCC regulations have forbidden devices from transmitting RF over long distances because they interfere with radio broadcast signals. Due to that, as well as changes in technology, today’s ray tube units transmit weaker signals at lower frequencies than the machines that Rife built. Modern machines range from mostly 1 Hz to 400,000 Hz; although some equipment, depending on how it’s constructed, can run higher frequencies. Because electrode units touch the body, they have fewer legal constraints than plasma units, and have a much wider range, typically outputting to the millions of hertz or megahertz (MHz).

Rife technology devices can range from simple to elaborate, with varying programming capabilities.

Smaller units can be the size of large loaves of bread, while large ones equal the size of tower computers. The user inputs the desired frequencies into the computerized machine, and a signal is sent to the noble gases in the tube. The resulting EM field disables or kills the microorganisms in the body, while also inputting energy into the body's cells.

In countries outside the United States, such as Germany and Romania, Rife Therapy is approved for medical purposes and is thus used in clinics, doctors' offices and even hospitals. In North America, which has more restrictive laws, the primary market for this equipment is consumers. If practitioners do use it for clients, they aren't allowed to make medical claims. Manufacturers of frequency equipment exist worldwide.

Two excellent freestanding plasma light frequency devices are especially popular in North America: the PERL M+ from Resonant Light Technology Inc. in Canada, and all of the P3 units from Pulsed Technologies, which has offices in the United States and Romania.

The PERL M+ is equipped with a glass tube filled with 100% argon gas and is run by the ProGen 3 generator, which can apply electrodes at the same time. When the noble gas is lit by the transmitted RF energy, the unit emits frequencies from 1,000 Hz to 3,100,000 Hz over a 27.125 megahertz carrier. The waveform (square, sine, or triangle) has a range of up to 30 feet (9 meters). The customer can either program frequencies into the unit or use a pre-programmed protocol. The equipment's management system (manufacturing quality and customer support) has received an international standard of certification; so should the company decide to apply for Class II Medical Device status, they will have met all the requirements. In Canada, Resonant Light Technology Inc. cannot legally state that the PERL M+ is a therapeutic device for use on humans, but the company does suggest other applications: therapeutic use with animals, extending the life of food in clinically controlled food storage lockers, slowing the growth of mold and fungi in greenhouses, and reducing the parasitic count within fruit orchards. Energizing the body is an obvious application as well.

Pulsed Technologies makes several different machines. The frequency outputs of this company's units range from .01 Hz to an impressive 1,000,000 Hz. All of the plasma systems are driven by the Precision Function Generator (PFG 2Z). The tubes are filled with a proprietary mixture of noble gases: neon, argon, krypton and xenon.

Unlike almost all other "rife" frequency devices, Pulsed Technologies equipment operates on principles that do not require an RF (radio frequency) carrier wave.

Nevertheless, the signal is powerful enough to penetrate deep into the body because the electronics manipulate the shape of the wave.

In Figure 9, the bottom of the photo, taken of an oscilloscope, depicts a signal sent *into* a tube by a Pulsed Technologies frequency generator. At the top, an entirely different waveform is emerging *from* the tube. It's the fast rise time, and sharp spike on the wave, that allows the signal to penetrate.

*Figure 9: Bottom, wave from generator to tube
Top, wave from tube; Pulsed Technologies*

All PFG generators may be used separately from the plasma unit as contact (electrode) devices. The computer software, included with the machines, has many options for creating sessions or adding to sessions, and selecting individual times and wave shapes for frequencies. Many practitioners and researchers as well as lay customers use this equipment. The company's emphasis on research—it sponsors the Eastern Europe-based professional Research and Resource Exchange Network—makes it popular in Europe, where doctors have seen substantial improvements in the subjects enrolled there in clinical trials. Applications of a Pulsed Technologies unit are similar to those of the PERL M+. The uses for a freestanding plasma light unit are limited only by the imagination of the user.

In Rife's era, it was proven that his frequency devices disabled pathogens that made humans and animals sick. We now know that some frequencies can regenerate tissue as well. One excellent frequency, used by modern users, that restores the voltage of cells is 40,000 Hz. While Rife's technology appeals to holistically oriented health practitioners, it can also be utilized by laypersons. In fact, this therapy is one of the most user-friendly of all "do it yourself" therapies. The largest market in the United States and other countries consists of people who want to improve their own health, as well as the health of their family, friends, pets, and farm animals.

One more thing. Rife Therapy can elicit strong detoxification responses. This will be addressed later in **Detoxification Responses**.

ELECTROMEDICINE: TRANSCRANIAL DIRECT CURRENT STIMULATION (tDCS)

In contrast to Rife Therapy, which is generally geared toward the entire system and the disabling of pathogens, Transcranial Direct Current Stimulation works solely with the brain. A type of neurostimulation, Transcranial Direct Current Stimulation (abbreviated *tDCS*, with a small “t”), has been extensively studied by the United States military for its potential to accelerate learning abilities, enhance visual perception, improve imagery recognition, and achieve an overall superior performance.

tDCS technology relies on extremely small amounts of safe, controlled, low-voltage, direct-current (DC) microcurrent to selected brain locations that are accessed via the scalp with simple sponge electrodes. Depending on where the electrodes are placed, tDCS either amplifies or inhibits neural pathways in the brain to address different functions. For example, it’s desirable to subdue activity in those brain centers that deal with addictions, hyperactivity and insomnia, while it’s desirable to augment activity in those brain centers that deal with learning and creativity.

Neurons (nerve cells) in our bodies act like wires as they conduct electrical messages. tDCS brings up the voltage, or forcefulness of electron flow, in the neurons. While the voltage from tDCS isn’t high enough to cause a neuron to fire, the current creates a clearer, more definite path for the electrical messages when the nerve actually does fire. (The neuron will retain more voltage for about an hour after the equipment is removed; and this effect will accumulate.) Used regularly, tDCS permanently causes the thickening of the fatty myelin sheaths that surround each neuron and act like rubber insulation around an electrical wire. This increased insulation helps the nerve cells to more easily pass electrical signals. Simply put, tDCS gives us a more efficient brain, and the user decides what functions he or she wants to improve.

The effects from tDCS are non-invasive yet profound. Several hundred published studies and technical papers show a reduction in depression and anxiety, a lessening in the number and intensity of risk-taking behaviors, improvement in speech and social interactions, heightened creativity, improved meditation, and more mindfulness.

Because so many different brain functions can be engaged, doctors have begun using the technology for various forms of rehabilitation and repair. People with Alzheimer’s, Parkinson’s disease, motor control issues, fibromyalgia, migraine, allergies, and chronic pain are beginning to see good to excellent results.

Pulsed Technologies, known for its “rife” frequency and EMF protection equipment, has made tDCS available

to the public at a very affordable cost. Some people might not even call it “equipment” because the unit consists of pieces that look like the most ordinary of accessories (even though the results can be astounding):

- ◆ An oversized flash drive containing tDCS electronics, which drives the unit and plugs into the thumb drive port of a computer, tablet, or smart phone.
- ◆ Two 2" round electrodes with microfiber-covered sponge on one side.
- ◆ A headband to affix the electrodes onto the head.

A lengthy, illustrated manual is provided with the equipment to help the user decide where to place the electrodes, depending on the goal. This technology is compatible with, and augments, all other modalities. It can be used during pregnancy and any crisis, imparting help without pharmaceuticals or even other therapies.

ELECTROMEDICINE: MONOCHROMATIC VISIBLE LIGHT (LASERS AND LEDS)

You’re at a lecture in an auditorium. The teacher, using what she calls a “laser pointer,” is shining a red-beamed penlight onto an image in her slide presentation that she wants you to focus on. The dot moves, and you focus on another image. After your class, you go home and play with your pet cat. You grab a pointer similar to the one your teacher had been using, and create a moving dot on the floor that keeps the cat occupied for as long as you’re willing to play. Try as she might, the cat can never catch the dot as it wiggles and waves on the floor, the walls, then the floor again. It’s difficult to see the beam through the air, but the dot magically appears on the floor. Later, you’re aware of how much your shoulder is hurting (probably from those heavy books you’ve been carrying around all day to your classes). So you open a drawer, take out an instrument with many diodes, turn it on, and apply it to your shoulder. After about fifteen minutes, you feel better. What do all these situations have in common? You’ve been using *monochromatic light*, which is the principle behind both lasers and LEDs.

Laser is an acronym for *Light Amplification by Stimulated Emission of Radiation*. To the uneducated general public, the word “laser” evokes a dangerous beam, usually red, that is used in restricted industrial and medical situations. But safe laser therapy has been used by health practitioners all over the world for almost 30 years. Most of the initial research and published data, which spanned the late

1970s to early 1980s, was from Russia. Later, as more papers were published, various medical organizations and government agencies all over the world (including the National Aeronautics and Space Administration in the United States) began using this modality as well.

Both lasers and LEDs can be made to produce any color wavelength. The color—whether it's red, green, blue, or another hue—is not due to glass, paint, or pigment. It's solely the wavelength of the light itself that gives the beam its characteristic color. The wavelength is always a single-color frequency, known as *monochromatic*. Although some types of lasers include mechanisms that emit heat in the form of invisible infrared radiation, for this discussion we are interested in lasers and LEDs that utilize monochromatic visible light only, and in the *red* spectrum. Monochromatic light treatment is commonly known as phototherapy. Used properly, red wavelengths may be the most versatile of all the colors.

Lasers and LEDs differ in some important ways, but they also share similarities. Both technologies are based on the energetic behavior of electrons. Normally, electrons occupy a fixed place in one or more orbital rings that sequentially surround the atom's nucleus. When they become excited, electrons move faster and jump to higher orbits. When they relax and return to their original position, electrons release energy in the form of photons (light units). The wavelength of a photon—its color—is determined by the amount of energy released when the electron drops to a lower orbit. *It is this emitted light that is harnessed in visible light laser and LED technology.*

Lasers and LEDs occupy a certain range of frequencies (frequency band) in the EM spectrum, but the frequency being used is almost always identified by the length of the wave rather than the frequency (designated in hertz). In the band of visible light, wavelengths are measured in nanometers, abbreviated nm. One nanometer, the length of one complete wave, is one billionth of a meter and roughly about the size of a human cell.

Lasers and LEDs that emit a red color range from about 620 nm to 670 nm or 700 nm, depending on what source you consult. Some clinicians prefer a 660-nm wavelength, asserting that this length wave is easiest for the tissues to absorb. Others prefer a ruby red 630-nm or 635-nm wave, based on research published in the *Journal of Clinical Laser Medicine & Surgery* stating that a 630-nm wavelength appears “to be most commonly associated with bacterial inhibition. The findings of this study might be useful as a basis for selecting LLLT [low level laser therapy] for infected wounds.”³⁴ In this case, “bacterial inhibition” consists of the retardation of the growth and functioning of pathogens. “What is good for the body is usually bad

Brief Guide to LED Colors and Their Effects

- ◆ **Red (620–700 nm).** Energizes. Renews all cells including skin. Reduces pain and inflammation. Grows hair. Improves circulation. Kills pathogens (at 630–635 nm).
- ◆ **Orange (595–620 nm).** Energizes. Heals and normalizes skin. Normalizes emotions and focus.
- ◆ **Yellow (575–595 nm).** Energizes. Restores nerves, especially motor nerves near skin. Reduces swelling. Repairs digestion. Improves concentration and mood.
- ◆ **Green (490–575 nm).** Energizes. Reduces inflammation. Improves collagen. Decreases wrinkles and acne. Renews cells. Decreases stress and difficult emotions.
- ◆ **Blue (455–490 nm).** Kills bacteria and fungi. Tightens and normalizes skin. Decreases pain and inflammation. Lessens headaches. Soothes.
- ◆ **Violet (390–455 nm).** Heals skin conditions of all kinds, including wrinkles. Energizes mental faculties.
- ◆ **White (390–700 nm: contains all the other colors).** In other words, sunlight! Energizes. Increases collagen. Improves focus, alertness, motivation, and cognition. Decreases pain and inflammation.

Nanometers are approximate; colors blend together.

for pathogens,” remarks Gerry Graham, a US chiropractor who administers laser therapy. “For example, the right pH for the body is the wrong pH for pathogens. Similarly, 635 nm is the worst wavelength for most pathogens but is beneficial for human tissue.”³⁵

Regardless of the specific favored wavelength, researchers and practitioners who use red light find that it works on the principle of *biomodulation*—turning a cell's function on or off through physiological means. Monochromatic red light stimulates blood circulation, increases lymphatic drainage, and promotes cell metabolism by stimulating photoreceptors in the mitochondria living within the cell. (Mitochondria are tiny living organelles with their own DNA and reproduction cycles, which live in symbiotic harmony with the cell, and control many important cellular processes including energy production.) Except on the eyes in the case of a laser (explained in a moment), the light can be applied to every part of the body: skin, soft tissue, muscle, bone, brain, organs, lymphatic fluid, glands, and blood. Used over an artery, the light can improve the condition of immune cells—leukocytes, T-cells, and B-cells within the bloodstream—so they can more efficiently disable pathogens.

Dr. Tiina Karu, professor of Laser Biology and Medicine in Russia, is reported to have discovered the following:

There are photoreceptors at the molecular-cellular level which, when triggered, activate a number of biological reactions: DNA/RNA synthesis, increased cAMP levels [cyclic adenosine monophosphate, a molecule involved in many biological processes], protein and collagen synthesis, and cellular proliferation. The result is rapid regeneration, normalization, and healing of damaged cellular tissue. In essence, light is a trigger for the rearrangement of cellular metabolism.³⁶

Single-wavelength light maintains its integrity while radiating. Its ability to travel along the meridians of the body without being dispersed into the surrounding tissues makes it useful for Chinese medicine treatments. A phototherapy device can be built to house a single light or many, but only one wavelength at a time should be shone on the body. Only monochromatic light affects the photoreceptors. If different wavelengths are simultaneously applied to the tissue, the cell receives conflicting signals and cannot respond properly.

LEDs and lasers can also be pulsed so that for a duration of time at regular intervals, the beam is on, off, on, off, on, off, etc. Pulsing the light stimulates healing. A continuous, steady emission (no pulse) sedates pain.

To produce light, a laser diode can contain argon, helium, neon, or krypton. The monochromatic light emitted by the lasers under discussion is *coherent*. This means, from a physics standpoint, that all the peaks and valleys of the waves line up. The waves are high at the same time, and low at the same time (Figure 11). In practical terms, this means that the light is directional and focused—or *collimated*—instead of scattered. This optical arrangement provides the intensity and precision of the beam and is probably the most expensive component of a laser diode assembly.

Figure 11: Coherent Waves (In Phase with Each Other), an Alignment Found in Lasers

Not all lasers utilizing red light have the same effects. Most people are familiar with the high-intensity, high-power “hard” lasers that are used by industry (to cut through steel and other metals) or by doctors (used during surgery to make clean cuts into the body, cauterize wounds, and remove unwanted tissue). These high-intensity lasers are legally restricted devices because of the damage they can cause. They’re also not therapeutic.

Genuine low-intensity, low-power lasers—also called “soft” or “cold” lasers—emit far less power than their restricted high-intensity counterparts. Their use for healing is also known as *Low-Intensity Laser Therapy* (LILT) or *Low Level Laser Therapy* (LLLT). The legal standard for what constitutes a low level laser can be confusing, however, because in some countries, a device legally classified as a LLL has enough power to heat tissue. Some laser therapists maintain that devices affecting cells through bio-modulation should not be categorized with devices that heat tissue. Australian laser experts Kerry Tume and Sean Tume suggest the following standard: “the energy output is low enough so that the treated tissue does not rise above . . . normal body temperature.”³⁷ Some practitioners allow only up to a 0.1 degree Fahrenheit increase in temperature. Otherwise, the device becomes too hot and has different (and undesirable) effects. Here is an instance, Graham points out, where “less can be more. Most people still fall for the idea that if 10 mW [milliwatts] will do a job in ten minutes, then 100 mW will do the same job in one minute, and 1000 mW will do the same job in one-tenth of a minute. But this isn’t true. The majority of lasers used for meridian therapy use [excessively high-powered, tissue-heating] infrared lasers. With these instruments, you can damage the meridians and over-stimulate tissues.”³⁸

Pulse is a popular term referring to the number of times the beam of light is turned on and off in one second (though the more precise term, used by engineers, is *gate*). The pulse rates can be as low as one, or as high as 1,000,000, in which the light is being turned on one million times and then turned off one million times each second. “Even though the eye cannot detect movement above 45 Hz or so,” Graham explains, “the body’s tissue can clearly detect and recognize these pulse rates in the tens of billions per second.”³⁹ Numbers commonly used as rife technology frequencies are often applied as laser pulse rates, and the effects are similar.

Laser therapy works on many types of conditions: injuries to ligaments, tendons, nerves, and other tissue; skin conditions; bone problems (such as osteoarthritis); first, second and third degree burns; dental problems; infections including herpes; and of course chronic pain.

The laser beam can be applied without risk to almost any part of the body (including trigger points and fascia). However, due to the precision of the beam, care must be taken to avoid shining the device directly into the eyes or even on the closed eyelid, because this can cause tissue damage and even blindness.

Now let's talk exclusively about LEDs. LED is an acronym for *Light Emitting Diode*. It's sometimes erroneously called a soft laser or laser, which it is not: the monochromatic light emitted by LEDs is *incoherent*. This means, from a physics standpoint, that the waves are emitted at random intervals because the peaks and valleys of the waves do not line up (Figure 12). In practical terms, this means that the light is multi-directional and diffuse, *not* directional and focused (collimated).

Figure 12: *Incoherent Wave (Out of Phase with Each Other), an Alignment Found in LEDs*

The lack of beam coherence and precision makes LED therapy safe enough to be used even by children—and difficult to abuse. The advantage of LEDs over lasers is their ability to be used directly on the eyelid to regenerate injured eye tissue. Also, an LED array is much less expensive than a soft laser. It too has widespread applications. “In Israel,” report Cocilovo and Rosen, “medical doctors utilize incoherent light transmitted by light emitting diodes (LEDs) in the practice of neurology, dentistry, dermatology, physiotherapy, and in cosmetic applications to promote collagen and elastin formation.”⁴⁰

Until the 1980s, low-level lasers were used almost exclusively for phototherapy because researchers thought that the light needed to be coherent, and prior promising research with incoherent light was nearly forgotten. Subsequently, some clinicians determined that coherency did not make a huge difference. “Dr. Karu,” write Cocilovo and Rosen, “contends that coherent light is not necessary, that incoherent light is equally effective at producing clinical results. Furthermore, she found that coherent light is converted to incoherent light in the body. The exact effect depends on the wavelength, dose, and intensity.”⁴¹ There’s a question as to whether these conclusions were based on

in vitro or *in vivo* research; the effects of light can be different in a culture than a living body. Nevertheless, enough users report benefits with LEDs to warrant its further investigation as a serious therapy. There is one anecdotal report, however, that cannot be contested. This author successfully treated a scratch on the cornea with a single-diode LED after a piece of plastic fell into her eye. After one hour of holding the light onto the closed, tearing eyelid, the pain and tearing were gone, vision was unaffected, and no more problems occurred.

A few decades ago, LEDs were not too common. Now, the average consumer can purchase them for a few dollars in any electronics supply store or online. However, the more expensive LEDs tend to be better quality, with a more precise output.

ELECTROMEDICINE: FAR INFRARED HEAT

Far Infrared (FIR) is a minuscule subsection of the Infrared (IR) portion of the electromagnetic spectrum. The IR and especially FIR bands are known for providing heat, and this is where our focus will be for this section.

Heat therapy is thousands of years old. Whether the heat source was a dry sauna, steam bath, or hot water bath, the ancients understood that when people perspire, they feel better. We know today that sweating is one of the body’s chief methods of eliminating waste, whether exogenous (from outside the body) or endogenous (from inside the body). Poisonous chemicals, heavy metals, and metabolic wastes are routinely trapped by the body’s tissues, especially the fat cells—which encapsulate the toxins to protect the bloodstream. These toxins not only exacerbate illness; in many instances, they cause illness.

The chemical load we carry was dramatically illustrated during a Spring 2001 Public Broadcasting System (PBS) special about the chemical industry’s suppression of evidence that their own products cause cancer. When newsman Bill Moyers had his blood drawn and analyzed, his blood sample contained over eighty common industrial chemicals, including alcohols, solvents, pesticides, petroleum-based synthetics, PCBs, and Persistent Organic Pollutants (POPs). Given this eclectic and horrifying sample, it’s easy to see why so many people today are ill.

During sweating, the fatty tissue vibrates faster, dumping its toxic load into the interstitial fluid (outside and between the cells). These interstitial wastes—which normally would have to be processed by the lymph system, urinary tract, and/or liver—are released through the

pores of the skin. This lightens the elimination burden of these other systems, giving them a chance to rest.

Sweating does more than eliminate toxins. It raises the pH of some portions of the body to a more alkaline state because chemical wastes and the products of cell metabolism are generally acidic. Although sweat therapy is not identical to having a fever, there are similarities between the two. When infected, the body produces a fever to “cook” pathogens, most of which cannot survive in temperatures of over 103°F or 104°F (39.4°C or 40°C). Sauna therapy can also make it too hot for pathogens to survive if the core temperature is raised enough. During fever, more endorphins (natural pain killers) are produced by the body. This, too, occurs during sauna therapy, which accounts for its pain-relieving benefits. During fever, the body produces more enzymes, which the white blood cells need to destroy pathogens. This occurs during sauna therapy as well. In a sauna, the heating of the body alone helps to relax the nerves and tissue fibers.

Modern scientists have discovered that the *source* of heat used to make us sweat can make a difference between highly effective and less satisfactory detoxification. Dr. John Harvey Kellogg, famous for creating breakfast cereal, is less known for having invented the electric light bath that preceded today’s FIR sauna cabinet. (The electric lights he used for the cabinet were supplied to him by his friend, inventor Thomas Alva Edison.) Even less publicized are the sophisticated tests he conducted in the early part of the twentieth century. Using devices he invented, Kellogg measured the toxins in the urine and sweat of healthy volunteers who took Russian baths, Turkish baths, and sessions in the doctor’s own electric light cabinets. The light bath encouraged the release of more toxins than did the steam cabinets. And the test subjects also became hotter, faster, because *the heat waves from the light bulbs in Dr. Kellogg’s sauna were in a particular far infrared range*. Far infrared contains among the most beneficial EM frequencies that the body requires for growth, repair, and health.

The amount of FIR emitted by a body or object is part of its electromagnetic signature. The movements of atoms and their constituent particles—as well as the movements of the chemical bonds between molecules—change direction, rotation, and orbit, depending on their frequency. These changes also correspond to alterations in the electrical and magnetic fields that they emit.

Far infrared wavelengths range from about 5.6 to 1000 microns. For healing purposes, we are interested in only a tiny portion of the FIR spectrum, which ranges from about 5.6 microns to 9 microns in length and radiates heat from about 470°F to 120°F (243.3°C to 48.9°C). (The

shorter wavelengths are hotter.) A heat source that emits a particular, narrow band of FIR is the most effective for sauna therapy. Not surprisingly, a wavelength of about 9.35 microns corresponds to a temperature of 98.6°F (37°C).

Water molecules are very efficient absorbers and emitters of far infrared radiation that’s about 9 microns in length. This wavelength also causes water clusters to become smaller, more motile, and more easily absorbed into the tissues. Put another way, water *intrinsically resonates* within these particular wavelengths. Whereas other EM spectrum wavelengths (such as the much longer radio waves) pass through water, a 9.4 micron far infrared wavelength will be absorbed by the water itself and cause its temperature to rise. People’s ability to absorb and emit FIR is related to the ability of water to absorb and emit FIR. The human body is comprised of nearly 70% water, which helps to explain why people respond in such a positive way to FIR.

For the vast majority of people, FIR is the most effective means of inducing a sweat. There are many good FIR saunas on the market today. For more information, see *The Holistic Handbook of Sauna Therapy* by Nenah Sylver.

ELECTROMEDICINE: SOUND THERAPIES

Sound as Mechanical Motion

Sound and music therapies have existed for centuries. In the last several decades, tuning forks, crystal and metal bowls, classical music from certain European composers, and sounds from nature such as bird songs, a steady rain or the ocean, have become popular for soothing the soul and emotions, even if obvious physical healing doesn’t occur.

Sound cannot be heard in a vacuum. It is commonly defined as existing only if there is a medium, such as air or water, to carry the vibrations. However, *all frequencies on the electromagnetic spectrum—regardless of their form—have a corresponding sound or tone, even if it does not transmit through air or water and even if we are not capable of hearing it*. This may be the origin of the phrase, “music of the spheres.”

During the educational seminars I give on Rife Therapy and electromedicine, people often ask if tones can be substituted therapeutically for various EM waves. The answer is “Perhaps.” Inaudible EM waves can be translated into audible tones by mathematically calculating lower or higher octaves of the original frequencies to bring them into the range of human hearing. Although any frequency can be converted or translated into sound, the sound might not have the equivalent therapeutic value (if any).

However, sometimes the healing effects are impressive (if unexpected), and sound will turn out to be the best delivery system for what's needed.

Ultrasound and infrasound are already used to a limited extent. *Ultrasound* is labeled as frequencies from above 20,000 Hz to a few Gigahertz—a range that's higher than what most human ears can typically perceive, although young people and adults with excellent hearing can actually hear a 20,000-Hz signal. Bats produce very high pitches for *echolocation*, where sound waves bounce off objects in their environment, allowing them to gauge distance and “see” in the dark, even reading their prey's internal structures. Most people are familiar with using ultrasound for diagnostic purposes, such as taking a picture of a fetus in the womb (which, contrary to popular belief, isn't safe, as discussed in Chapter 1). Doctors use ultrasound therapeutically to break apart calcified stones in the body; but unless it's used with care and at very low power, ultrasound can damage the tissues.

The much lower-frequency *infrasound* is labeled as frequencies lower than 20 Hz, which is typically inaudible to the human ear (especially at frequencies lower than 16Hz). Whales and elephants use infrasound to communicate with one another. The military, imitating what comes naturally to some animals, uses machines to transmit classified data on those low-frequency channels. We also use infrasound equipment to detect volcanic eruptions, thunderstorms, earthquakes and human-made explosions—again, imitating with specialized equipment what animals can do naturally. At a certain strength and frequency, infrasound can cause the human eye to vibrate, leading to distorted vision and optical illusions. Similar low-range frequencies have also been cited as instilling fear and dread in people. Many people feel infrasound in their body, even if they can't consciously hear those low frequencies. A few companies have created low-power infrasound equipment for the layperson, to relieve pain, reduce inflammation and increase circulation. The equipment is reported to mimic the healing, low-frequency sound waves (8 to 14 Hz) that are naturally emitted by practitioners of the Chinese art of Qi Gong. However, as such equipment is outside the understanding of allopathic medicine, it's not being widely used.

Despite the abovementioned applications, sound has not been used very much as an electromedical modality. Following are two unique methods of delivering sound to the body in safe, healing ways. The first uses inaudible sound, made audible, to analyze; and then audible sound to correct. The second uses acoustic pressure waves (which happen to be audible) to treat a number of conditions, many of them serious.

VoiceBio™

We know that every organ, gland, and tissue in the body emits EM radiation, and that this radiation corresponds to tones which we might hear if they were in an audible range. New technologies are based on this knowledge. One is from biologist David Deamer. He decoded and translated some of the vibrational frequencies from portions of DNA into audible tones; and musician Susan Alexjander later added voice and instruments for a CD. Scientists have begun using acoustically translated DNA in a number of novel experiments. In one, the tones emitted by live and dying yeast cells have been recorded and placed on some Internet websites.

From this background comes VoiceBio™, a unique use of sound, which was first developed in 1995 by naturopath Kae Liu Thompson. VoiceBio™ is a non-invasive way of analyzing the function of organs, glands, and various body systems, based on the tones (EM radiation) they emit. If we could hear the symphony expressed by a living body, we would hear the liver vibrating to the note of G, the heart vibrating to the note of A#, and so on. Thompson discovered that the body's frequencies are reflected in the voice, no matter which octave the person uses when speaking or singing.

In an ideal world, each of the 12 notes of a scale would be represented on a graph of the voice (called a voiceprint). But due to poor diet, trauma, injury, infection, chemical poisoning, or a combination of these, most voiceprints show unequally represented notes that have huge variations beyond the normal, expected, uneven “bell curve.” The notes can all be present (thus falling within the range of good health) or be overemphasized, weak, or missing entirely from the voice (thus falling within the range of compromised health). Assessing the heavy, normal, and weak areas of a voiceprint can help pinpoint which body parts or systems are off-balance.

For the VoiceBio™ assessment, the client records a voice sample into a sensitive microphone connected to very small piece of proprietary equipment attached to a computer. The software sorts, translates, and graphs the tones (ignoring word content) onto a voiceprint that quantifies the frequencies, and the graph is displayed on the computer screen. It was developed because Thompson found that the sound cards in computers are unreliable, sometimes varying as much as two tones in accuracy. The act of sampling the voice takes under ten minutes.

There are several ways to supply the body with the balancing frequencies. The client can listen, through stereo headphones, to a palm-size tone box (called a “sonic balancer”) encoded with personalized sound formulas.

Derived by Thompson using complex mathematical computations, the sound formulas are different for every person—even those who need the same notes—since they are based on how the client’s brain is fundamentally organized. Although the VoiceBio™ sound formulas are subjectively experienced by the conscious ear more as white noise than patterned pitches, the effects are like healing music rather than disorganized noise, in part because the notes are in the very low range of human hearing. Most important, the tone boxes can be programmed so that the brain learns to produce the weak or missing notes on its own. This brings VoiceBio™ therapy into the realm of holistic self-regulation, rather than allopathic substitution. The client can also listen to the missing notes as either straight musical tones or music in that key. In the case of overemphasized notes, the VoiceBio™ practitioner suggests detoxification and cleansing of the corresponding organs and systems.

The most powerful effect of all, however, occurs when the clients themselves generate the needed tones by singing or humming. (It also makes the therapy cost-effective for the client.) One might think that a highly depleted or stressed individual cannot muster enough energy to hum, and that the very ill need a “jump-start” from an external source, such as the sonic balancer. However, the reality is “quite the opposite,” Dr. Thompson states. “The very ill see the fastest results by even humming the note for just a brief period a day. I have *never* found a client who could not hum something. Trials conducted in the past year in four states show that having the clients do it themselves is more effective than the sonic balancers by over 200 percent.”⁴²

Usually, after a month, the client is retested to see if the same formula is needed, if a different formula is needed, or if the client needs to continue at all. Although results to sound therapy can be felt within days or even hours, the listening or humming continues over a period of weeks and even months, depending on the severity of the condition and the person’s ability to respond.

Thompson’s discovery that all notes correspond to specific nutrients and drugs (as well as body parts and systems) brings another level of specificity to VoiceBio™. A voiceprint helps the practitioner pinpoint which nutrients are most needed by the client. (The nutrients may have an obvious relationship to the organs or glands whose notes they share, but sometimes they do not. Nevertheless, the system works.) Thus, nutritional support in the form of vitamin, mineral and herbal supplementation is integrated with the VoiceBio™ therapy.

The voiceprint can also show which pharmaceuticals might be useful. If the client is taking a drug whose frequency matches a note that is already too high, continuing to take the drug can further stress the note.

However, the voiceprint can help determine the drug that may be better suited to the client, if there is another drug that produces the same (desired) effect but resonates in a note that’s too low (or at least not as high).

It’s important to emphasize that there are many nutrients that resonate in any given note (C, C#, D, etc.), because each note has a *range* of cycles per second. (Historically, what precisely constituted a given note depended on the country and era.) However, the frequency of each nutrient is extremely precise, which is why any transmission device must be accurate to the second decimal point. Thompson devoted many years of research (and expensive laboratory tests) to find the frequencies of nutrients (vitamins, minerals, amino acids, fatty acids, etc.) as well as toxins and drugs. Some sound treatment systems have posted nutrient frequencies on the Internet that are incorrect, because they compute frequency based on the molecular weight of the elements that comprise the nutrients, rather than on the wavelengths themselves. (Weight measures how heavy something is, and has nothing to do with oscillation or frequency.) Like most electromedical therapies, sound protocols attain the best results with the exact frequencies.

Healing in this way with sound will become imperative if global government restrictions to supplements become even more severe than they are now. People could assimilate the frequencies of their chosen supplements via headphones, or even sound recordings. This user-friendly modality does not make medical claims, so it can be implemented by laypeople as well as health practitioners.

Wave Therapy

Even to those accustomed to using electromedical devices, a non-portable machine that heals using low-frequency acoustic pressure waves may seem unlikely. The story of how acoustic wave therapy was developed would seem like an arresting piece of fiction if it weren’t true.

Wave Therapy wasn’t initially designed as a healing modality. Two decades ago, electronics engineer Alphonse Cassone sought a new and efficient way to extract minerals (especially gold) from soil. The medium he selected, sound, required a powerful speaker. So he selected one used for SONAR (an acronym for *SOund Navigation And Ranging*), typically used by the Navy for submarine navigation. When submerged in water, a SONAR speaker (also known as a *transducer*) amplifies sound more rapidly and strongly because sound travels faster in water than in air. Cassone’s specially designed transducer was not only omnidirectional, but it caused compression waves in the air once the waves left the water.

Cassone maintained the speaker in a clean, water-filled oil drum in his garage and experimented daily. Because the machine emitted a distinct, steady, high-pitched tone, it didn't take long for his elderly next door neighbor to knock on his door. However, this wasn't a noise complaint. The neighbor, who had severe arthritis in his knees, had been experiencing less pain as the days passed and wanted to know what Cassone was doing. Cassone initially didn't believe him, but because the man insisted and wouldn't take "no" for an answer, he was allowed to sit alongside the equipment each day. The neighbor was soon able to walk more easily, with long strides. Baffled, Cassone began intercepting strangers on the street and inviting them to his garage for an acoustic wave session, after which he quizzed them about how they felt. To transmit the optimal amount of energy, the engineer experimented with different frequencies and durations. He also had to factor in the intensity of the signal, the viscosity of the liquid, and size of the tank. He eventually settled on a 600-Hz signal (although not before exploding about two hundred transducers in his attempts to produce exactly the signal he wanted).

Before long, word spread of an amazing machine and townspeople arrived unannounced at the garage. As more folks visited—some of them from across the country, thanks to an enthusiastic telephone network—Cassone decided to conduct informal tests. He wouldn't make any medical claims or promise his visitors that they could be helped, but he collected enough data to convince him that this modality might be useful for health conditions.

How do sound waves heal? We not only hear sound, we also *feel* sound. Similar to how an earthworm moves, sound moves by compressing and decompressing. If the *compression waves* are powerful enough, they can stimulate the *mechanoreceptors* on the skin—special sensory receptors or nerve endings that respond to mechanical pressure. The transducer Cassone built provides acoustic stimulation like a deep massage to every cell in the body.

Cassone applied for, and received, three patents for treating circulatory, blood-related medical, and musculoskeletal connective tissue disorders. Doctors from a local hospital, located across the parking lot from his new Las Vegas, Nevada office (he was no longer working from his garage) would wheel people just released from surgery to the office to be treated.

In 2002, "The effects of a low frequency acoustic waveform on peripheral vascular disease [PVD]: a pilot study" was published by University of Nevada researchers. The authors wrote:

Despite surgical and interventional advances, as many as 7% of all patients with PVD will go on to require amputation for critical limb ischemia [restricted blood supply to the tissues] within 5 years of symptom onset. . . . [Despite some problems with the design of the study, indicating that more experimentation needs to be done,] exposure to the acoustic waves at the designed frequency increased the blood flow velocity pre to post in all of the 10 vessels examined.⁴³

The researchers concluded that Cassone's acoustic wave modality performed much better than infrasonic treatments. A much later study, conducted in 2016, concluded that use of this modality "appears to improve ROM [range of motion] in various joints while decreasing pain in individuals diagnosed with OA [osteoarthritis] utilizing an audible low frequency acoustic waveform."⁴⁴

By 2016, Cassone's streamlined and patented Medsonix Transducer received clearance from the FDA as a Class 1 Medical Device. It falls into the category of "therapeutic massager" intended for medical purposes, such as the relief of muscle aches and pains. Wave Therapy, a Nevada company that holds exclusive worldwide distributorship rights, sells the device primarily to physicians, chiropractors, and other health care providers as well as sports teams. In addition, dedicated Wave Therapy clinics are operating. The clinics state that they serve clients suffering from:

- ◆ Cardiovascular conditions of all kinds, in which either the microcirculation or macrocirculation (or both) are impeded
- ◆ Cognitive dysfunction
- ◆ Injuries
- ◆ Fatigue and lack of energy, chronic and acute
- ◆ Pain and stiffness in any area of the body
- ◆ Headaches and migraines
- ◆ Immune dysfunction
- ◆ Mitochondrial disorders
- ◆ Nervous system problems, including lack of motor coordination, dizziness, and perceptual difficulties
- ◆ Restricted mobility
- ◆ Skeletal and disc issues, including back pain
- ◆ Wounds, including deep and slow-healing ones

Wave Therapy is simple to administer and receive. Clients sit around the completely enclosed, table-high vat of water that contains the specially designed speaker (transducer). People can nap, read, write, meditate, or simply rest. However, be aware that the machine emits a very loud, shrill tone; and even the noise-cancelling earphones that are provided (which clients can use to listen to music on portable players) may not be enough to deaden the noise. It's best to be within an 8-foot radius of the machine, but the patent states a 20-foot reach. This technology is safe for people wearing pacemakers, defibrillators, and any other type of implant (electronic or not) because it uses sound, not electrical current or magnetism, to broadcast the waves. Sessions typically last just under one hour, repeated bi-weekly or weekly.

Clients report different experiences. Most people feel the effects of the waves, while a few feel the pressure waves themselves. It's common to perceive a warm tingling sensation around the affected areas or sometimes throughout the entire body. Circulation may continue to increase and inflammation may continue to decrease after the session. However, while some people feel more energized during or immediately after the session, others experience fatigue for days afterward. According to the corporate sales office, although over three-quarters of Wave Therapy recipients report improvement after only one session, about one-quarter of fibromyalgia sufferers have increased pain for a period of time before it reportedly subsides. We don't know (yet) why this occurs.

The variety of client responses may be due to a number of factors. Mechanical energy, from the oscillations of the transducer, causes the tissues to move faster. This can increase metabolism as well as help the mitochondria (the fuel-burning units of the cells) utilize fuel more efficiently. The blood vessel dilation is probably influenced by increased nitric oxide production. We must also consider increased permeability of the cell membranes, which, according to tests conducted at two Wave Therapy clinics, is at least partially corrected in one session. (However, long-term follow-up studies have not been done so we don't know how long the correction lasts.)

In sick people, cell membranes don't function well. Electrical charges inside and outside the cells are weak, corresponding to altered and suboptimal levels of electrolytes (mineral ions). If the sodium and potassium ions are not in proper amounts and ratios inside and outside the cells, the person will not be properly hydrated. Excess water will migrate outside the cell and not enough water will be inside the cell. The waves help correct this issue, allowing nutrients to enter and wastes to exit. When the cells begin to metabolize properly, waste removal can be

overwhelming. This waste removal—which often causes a *Herxheimer reaction* (discussed later in **Detoxification Responses**)—can cause clients to feel more ill than they felt prior to a session. Many people develop flu-like symptoms, sweating and diarrhea, particularly if there's a longstanding history of infections. Therefore, people who experience extreme detox should wait until they feel better before attempting another session. When interviewed in 2013, Cassone suggested that the acoustic waves blast through deranged tissue, which would produce plenty of waste. It's also reasonable to assume that the waves could break apart biofilms.

The penetration power of the waves has enormous repercussions for people struggling with a heavy pathogen load such as Lyme and its co-infections. Some clients with Lyme disease say they feel better when nothing else has helped them. However, effects are unpredictable and uneven. Some Lyme sufferers don't experience results unless they receive double sessions lasting almost two hours, while others can tolerate only 20 minutes or less. The die-off of microbial waste and systemic toxins can be severe; so it's important that those with Lyme and other severe infections limit the number of sessions and the time allotted for each session. Lyme appears to be excessively difficult to treat with this therapy, while people with injuries such as sprains and broken bones show the most visible and impressive improvement. My own investigation suggests that Wave Therapy may be safer and far more useful for people with musculoskeletal and neurological conditions than those with severe infections, especially if the infections are systemic rather than local.

Currently, Wave Therapy is administered in the US, Canada, Mexico, and the UK. Official Wave Therapy clinics have no requirements to be staffed by medical personnel. However, a small number of health care providers have this equipment in their offices. Because the cost of a unit is close to ninety thousand dollars, the average layperson (or even health practitioner) cannot afford to purchase it. Therefore, Wave Therapy is unlikely to become a common self-help modality anytime soon (if at all). Nevertheless, it's helpful to know about it because some people obtain results when other modalities—both allopathic and complementary—fail. This equipment is still experimental, so we don't know how many sessions are required (on average) for which conditions, what type of subject responds best, and for how long the results last. More and rigorous scientific, third-party research needs to be conducted. A seriously ill person who wants to experience this modality should seek a licensed health practitioner to administer and monitor the sessions so unforeseen problems can be managed as they occur.

THERAPEUTIC PASSIVE ENERGY ITEMS

In the past few decades, a new category of health products, ranging from jewelry to personal care items, has emerged that utilizes frequencies. These products are imprinted: infused with information that is vibrational in nature. Electricity may have been involved in their imprinting, but unlike electromedical devices, these items don't rely on electricity or any other outside source of power to transmit the energy—they utilize the electricity already produced by the human body. These products are considered *passive energy* items. The energetic message with which they're imbued is passively transmitted, simply because the object is touching the body or near the body, which puts it in the range of the human aura or biofield. The *biofield* is commonly understood as the field of energy (not necessarily solely comprised of electromagnetic radiation) that suffuses and surrounds a living organism.

Imprinting is not an exotic or new concept. Since homeopathy was developed in the 1790s by German medical doctor Samuel Hahnemann, we have understood that virtually any liquid or solid—such as water, metal, and gemstones such as quartz—can be imprinted, or imbued with information in the form of an electromagnetic or longitudinal wave signature. Masaru Emoto, author of *The Message from Water*, showed how emotionally positive words such as “thanks” and “love,” typed on pieces of paper and placed under plain vials of water, structured the water differently than did emotionally negative words such as “angry” and “hate.” After all water samples were frozen, both the treated and untreated crystals were examined under a microscope. Positive words structured the water into lovely, six-sided crystalline shapes, while negative words yielded ugly, visually chaotic forms.

We currently use this technology every day without even thinking about it, with our computers, tablets, cell phones, automobiles, or any other gadget that depends on silica chips for processing. Therefore, it's reasonable that imprinting should be used in other, unique ways.

Tuning Element

Tuning Element is a United States technology company that manufactures three types of unique products: pain relief patches, jewelry (bracelets, necklaces, anklets), and water containers. These products are utilized somewhat differently, although their functions can overlap. The imprinted Tuning Element products provide three main functions.

- ◆ *Healthy cell and tissue support.* The supportive frequencies provide the correct information of how healthy tissues in the body are supposed to resonate, and are based on the resonances known to be emitted by healthy tissue. The company analogizes the healing to a set of tuning forks that are of the same frequency, only one is vibrating and one is still. When the vibrating tuning fork is placed next to the one that is still, the movement of the first *entrains* the second, or causes the formerly still tuning fork to resonate or hum in harmony with the original. Because the body naturally strives to resonate at the proper frequency, the Tuning Element products imbued with the restorative frequencies act an external reference point for the body. Thus, this passive technology helps optimize body and brain function, restores missing or reduced cell communication, and accelerates the body's natural ability to heal itself more efficiently.
- ◆ *Schumann Resonances.* These emissions are named after University of Munich professor Schumann who, in the 1950s, calculated the beneficial magnetic frequencies emitted by the Earth. Both humans and animals evolved in synchronous rhythm with the Earth's beneficial frequencies (a kind of natural “heartbeat”), but modern electrosmog has nullified these frequencies. The restorative Schumann Resonances (along with the frequencies for normal body tissue) remind the body to rebalance. All seven peaks of the Schumann Resonances are used. (Also see information on the VitaSet Generator under **EMF Protection**, following.)
- ◆ *Anti-pathogen frequencies.* These operate similarly to those emitted by an electronic frequency generator (see the **Plasma: Rife Therapy** section), except that these portable, passive energy products don't require electricity or batteries.

Despite the above functions, company founder Sean Martinez states that these categories are limiting—that although they “use organ support frequencies and few anti-pathogen frequencies, this is not our main focus on this technology. . . . We use ‘Pro-Life’ proprietary energetic blends that support and advance life. Another key is how the blends work together with in the body, mind, and biofield.”⁴⁵

Three of the company's best-selling product lines are described below. Understandably, no medical claims can be made for their products.

Patches

A different approach to pain than pharmaceuticals or even herbal analgesics, Tuning Element has created silicon-based, titanium salt-infused, 1.25" square patches. Applied to painful areas of the body with a little water, a thin layer of material adheres to the body like a temporary tattoo. However, there's no glue to cause discomfort and they can't be felt by the wearer. The patches last a few days to even a week, depending where on the body they're applied and how often they encounter friction. They don't fall off and can be worn in bath or swimming water. The patches don't contain lotions, creams, or any nano particles; they work strictly by sending vibrational information to the body. These patches contain frequencies for pain. Some of the frequencies (noted in Chapter 5) are 880 Hz (for pathogens), 220 Hz for body function support, and the fundamental Schumann Resonance, 7.83. (See **EMF Protection**, next section, for more information on the Schumann Resonances.)

In a 2017 study published by *IEEE Transactions on NanoBioscience*, the authors wrote:

Pain is a very complex biochemical and electrical process involving sensory part, nerve transmission, and brain perception of pain. We concentrated our research on nerve transmission, which is electrical signal along the nerve (axon). This electrical signal is created by a complex activity of opening and closing of pain related ion channels and redistribution of electrically charged ions on the nerve cell membrane. . . . The TERP patches . . . can resonantly absorb and damp[en] electromagnetic radiation from ion channel activation. This implies that such resonance can interfere with activity of pain related sodium ion channels, influence their opening and closing function and consequently influence pain transmission along the nerve (axon). . . .

A number of anecdotal reports have shown that [the patches] diffuse pain, including chronic, inflammatory and neuropathic . . . [and that they] offer a safe and cost-effective pain management.⁴⁶

The company emphasizes that anyone wearing their pain relief patches should drink the recommended amount of water daily to achieve the best possible results, as proper hydration is key to cell function. Water helps to flush out the wastes that naturally result from normal cell metabolism. Satisfied customers report a greater sense of comfort and relief from pain and illness, reduced swelling,

more energy, better sleep, more focus and better moods, greater range of motion, and more muscular strength. These benefits have enormous implications for people suffering from arthritis, nerve-related disorders (even ADHD), digestive problems, hormone imbalances and skin problems. One surgeon, Dr. Srbslov Brasovan of Chicago, Illinois, reports that clients who use the patches after surgery heal so much faster that they are on their feet in two weeks instead of two months.

Jewelry

Tuning Element's aesthetically pleasing jewelry line consists of bracelets, necklaces, anklets, and animal tags made of stainless steel, sterling silver, and gold. The jewelry is categorized according to five levels. Level One, Two and Three products are made of surgical stainless steel. Level One contains frequencies, devoted to tissue normalization and the Schumann Resonances, which stabilize the body's electrical system. Level Two contains the frequencies of Level One, with additional frequencies designed to support natural function and recovery processes. Level Three contains frequencies of Levels One and Two, with additional frequencies to fight pathogens and support cognitive function. People concerned about their health or who are facing health challenges often opt for the Level Three products. Level Four products, made of highly conductive sterling silver, contain the frequencies of the prior three levels, plus supportive frequencies for some (unspecified) energetic systems of the body. The one Level Five product, an 18-karat gold necklace, contains all of the frequencies of the prior four levels, plus supportive frequencies additional energetic systems. People seeking to support their whole body or who have serious health concerns may opt for Level Five.

The company also provides frequency-imbued tags for small and large animals. The technology is designed to last for the lifetime of the products. No maintenance is required; the person (or animal) simply wears the item.

As with the pain relief patches, people who wear the jewelry need to drink more water. Tuning Element has created a high-tech water bottle for this purpose (next).

Aqua Tune Water Bottle

The company makes bottles—glass with a silicone sleeve, and stainless steel—that contain frequencies for maintaining cell function of various systems (one bottle contains more frequencies than the other). Both styles structure water after one minute. Found *inside* all living cells, *structured* water is bioavailable, which somehow

makes it “wetter.” Water that’s not structured cannot enter the cell and remains in the space *between* the cells, causing unnatural edema in the body. Unstructured water must be energetically processed before it’s bioavailable. While structuring water does not create different elements, it does alter how the water behaves. Structuring water involves changing (sometimes very slightly) the angle of the hydrogen and oxygen atoms that comprise the water molecule. Aqua Tune water is also more oxygenated, even more so when the container is shaken.

The Aqua-Tune water further accelerates cleansing so that waste materials can more easily leave the cell and nutrients can enter. This naturally positively affects brain function and concentration. It also helps restore cell communication, assists with digestive, kidney and liver health, and accelerates the body’s overall natural ability to heal itself more efficiently. Increased consumption of any water helps eliminate the possible headaches, nausea and flu-like symptoms that are a normal result of detoxification. As with any detoxification protocol, more fluid in the blood reduces the poison-to-liquid ratio.

EMF PROTECTION

The earlier section, **Harmful Effects of EM Radiation and EM Fields** (also discussed in Chapter 1), addressed the hazards of living near major power lines, cell phone towers and electrical generators, as well as the effects of using everyday electrical appliances such as hair dryers and blenders. Part of the reason there are so many seemingly disparate and severe health problems is the lack of mineral absorption when people are exposed to harmful EM radiation. Four minerals that are critical for proper cell function, and which the body cannot absorb well when it’s saturated with electrosmog, are copper, magnesium, phosphorus, and zinc.

In our WiFi-saturated world, it’s almost impossible to avoid harmful EM fields (also called *electrosmog*). However, there are some effective technologies we can use to help protect ourselves from these harmful emissions. Some of these products are passive and don’t require an electrical outlet or batteries in order to be activated; they’re simply worn on the body or placed on the electrical appliance that we want to shield. Other products are electronic in nature. I’ll discuss the passive energy items first.

Tuning Element (Non-Electronic)

See “Jewelry” from Tuning Element under **Therapeutic Passive Energy Items** in previous section.

Eradicator Technologies (Non-Electronic)

The Canada-based company Eradicator Technologies (www.eradicatortechnologies.com) specializes in products that offer protection from dangerous electromagnetic fields. One of the products is a small chip that’s applied to various appliances, such as cell phones, computers, WiFi routers and various wireless devices, smart meters, stereo equipment, GPS systems, iPods and iPads, alarm clocks, hair dryers, television sets, etc. The company points out that these protective chips don’t affect the quality of any transmissions, but harmonize the electric and magnetic fields to eliminate low frequencies of radiation through the use of a zinc and copper formula.

What if you’re outside your protected house? Eradicator Technologies offers a variety of necklaces in its “Shield” line. According to the company founder, Alain Basic, each Shield is bombarded with high-energy photons that cancel out harmful frequencies. The Shield is also said to remove radiation that’s already stored in the body. All of the jewelry is imprinted with a symmetrical design, but Basic emphasizes that the design itself possesses no intrinsic power—that it’s simply the company’s logo, and it’s the high-energy photons that give the metal its protective properties.

The Eradicator Technologies website displays two video clips of live blood samples viewed through a dark field microscope. In the first sample, the subject is holding a cell phone. We can see the effects of the phone radiation on her red blood cells, which are clumped together, devoid of oxygen and vital electrical charge. (Normally, the red blood cells remain separate because their electrical charge is sufficient). In the second sample, after the subject has held the Shield for just five minutes, the red blood cells are normal, separate and charged.

Besides live blood cell analysis, Alain Basic advises, other methods can be used to assess the efficacy of his EMF protection products. These include Vega testing, electrodermal screening, biofeedback, and kinesiology (muscle testing).

People report subjectively feeling better when they use these products. Their lab tests, doctor visits, and quality of life confirm these reports.

VitaSet Generator (VSG) from Pulsed Technologies (Electronic)

Jimmie Holman, a former government scientist with a top-secret clearance, wasn't planning to become involved in EMF protection. He originally started his company, Pulsed Technologies, to build frequency equipment ("rife" machines). However, when mandatory smart meters were installed in his neighborhood and he started feeling unwell, he created the VitaSet Generator (VSG) to help his body resist the negative impact of electrosmog.

The slim, 7.5" × 9.5" × 1.5" microprocessor-controlled VSG emits *Schumann Resonances* to help those affected by high electrosmog environments. The beneficial resonances of Earth's magnetic field are named after Professor Winfried Otto Schumann of the Technical University of Munich, who calculated them in the 1950s. Approximately fifty lightning flashes bombard the Earth every second, creating an electromagnetic wave of charged particles between the Earth's surface and about 60 miles up.

For hundreds of thousands of years, humans and animals evolved to this "repeating heartbeat" of energy flashes. Our brainwave frequencies are integrally tied to the rhythms of Earth. In fact, the Schumann Resonances are essential for proper DNA signaling and numerous biological functions. The lowest, most intense of these resonant frequencies occurs at approximately 7.83 Hz; but there are higher beneficial peaks too, spaced at approximately 6.5 Hz intervals: 14.3 Hz, 20.8 Hz, 27.3 Hz, and 33.8 Hz. These frequency peaks, although affected somewhat by various atmospheric and solar phenomena, remain relatively stable.

Before 1900, the primary electromagnetic (EM) field in the environment was a magnetic field, from the Earth itself. Today, however, competing, concentrated, abnormal electrical stimulation—from high voltage power lines to WiFi—interfere with the body's ability to tap into, and be nourished by, these natural Earth frequencies. In fact, our ability to detect and utilize these resonances is heavily impaired, due to the invasion of millions of harmful EM fields all around us.

The VSG is designed to remain on constantly (unless it's switched off) in the house, office or automobile in which it's placed. The machine has two modes, day and night. When in the day mode, the VSG delivers the five primary natural Schumann Resonances. When in the night mode, the machine cycles through select subharmonics of Schumann Resonances corresponding to appropriate regenerative brainwave states to help induce sleep (via brainwave entrainment). The VSG can be set to automatically switch between modes each day. Or, it can be manually overridden when desired. It operates on universal AC or batteries for travel.

MISCELLANEOUS: PHOTONIC TRANSMISSION

In today's world of rigid regulations governing the approval of a device for medical use—not to mention the prohibitive cost of securing the approval—creative thinking is required to build therapeutic equipment. The Hydration App and the L.I.F.E. App were born when an ordinary piece of technology was adapted to deliver extraordinary benefits for which that technology was not originally designed. Neither of these technologies falls into any of the categories so far discussed in this essay.

These two apps are the Hydration App and L.I.F.E. App from Cell Wellbeing—and they transmit frequencies through an ordinary cell phone, using the phone's flashlight feature! Simply download the app onto your phone and shine the flashlight for a couple of minutes into a container of water or other liquid (depending on which app you're using). The results are profound, and belie the simplicity and convenience of how the frequencies are delivered. The apps, says the company's website, transmit frequencies that improve the health of the user "due to structural rearrangement of the quantum energy field."⁴⁷

The Hydration App creates structured water, also known as *exclusion zone* or *EZ* water (see **Water** in Chapter 3). The water molecules become symmetrical in structure, which means that not only is the water "wetter" (thus entering and leaving the cells more easily), but it has much better oxygenation properties. While the body is becoming more hydrated, water, coffee, tea, juice, and other liquids have a sweeter taste. Even lemon juice feels smoother and is easier to drink. Customers put the water into a spray bottle and periodically mist themselves to gain more energy. The mist can also be used for plants and cut flowers. Even face creams and tinctures work better when prepared with Hydration App water. There is no limit to this water's uses.

The L.I.F.E. App frequencies, similarly infused into water, are used specifically for sensitivity to electrosmog (EMF). Such water is misted onto the body using a spray bottle. The user should immediately feel more refreshed and alert, as one might feel next to a beneficial negative-ion waterfall. Because ultraviolet light ultimately degrades the frequencies in the water, a dark blue spray bottle is suggested, which will keep the water viable for about two days. As a bonus, after using this app twice a day for one week, your cell phone itself will become impregnated with the frequencies that harmonize the EMF.

The app developers worked hard to make sophisticated healing technology—with profound benefits—available to everyone for less than the cost of one fancy cup of coffee per month. Now, everyone can feel better.

DETOXIFICATION RESPONSES

A *Herxheimer reaction*, named after the doctor who catalogued it, is a detoxification response that occurs as a result of waste materials being released into the system. Any therapy that encourages normal cell metabolism will release toxins: as nutrients enter the cell, wastes leave. Wastes that have exited the tissues can cause symptoms until the body excretes them. Some people who use electromedical and other holistic therapies mistakenly believe that if they feel bad, it's because the therapy is flawed. However, the therapy is merely doing its job.

For people undergoing a detox response, one can assume that pathogen wastes and other toxins are being released into the bloodstream. The first thing to do is drink more water. Along with the water, it's helpful to take at least 1 heaping teaspoon of activated charcoal to help bind the toxins in the gut and prevent them from being redistributed by the bile. (The equivalent amount of activated charcoal can be taken in capsules—at least 6 is a good start—although the charcoal will do its work in the gut much more quickly if there's no wait for the stomach acids to first dissolve the capsules.) At least 1 gram of Vitamin C is ideal for antioxidant and cell membrane protection; make sure it's buffered to avoid an upset stomach. Protease (an enzyme) is also useful to scavenge protein wastes; 2–3 capsules should suffice.

Sauna therapy, especially in conjunction with niacin (see pages 484, 696, and 911), will help the body excrete heavy metals and other contaminants that may have been dislodged. This may be one of the most important methods of cleansing that you can utilize. People may also choose to take herbal antimicrobials (berberine, grapefruit seed extract, haritaki, moringa, oregano and wormwood, among other substances); extra zinc for immune support; organ support glandulars; and calcium bentonite clay water to help alleviate symptoms and mop up the extra waste that has been released into the system.

One more thing. It's possible that a person might be responding negatively to the emissions from a piece of equipment, rather than experiencing Herx reactions. This may be especially true if the equipment is emitting too high a level of electrical current; if its magnetic field is too intense; or if radio frequencies (RF) are involved in conveying a signal. A Herx reaction, while it can feel strong, should not go on indefinitely. You should see some positive changes after a reasonable period. If you suspect that you might be responding negatively to a modality itself rather than to any debris that's being elicited, consult an experienced health practitioner at once.

MANY APPROACHES, SYNERGISTIC EFFECTS, ALL BIOCOMPATIBLE, ONE GOAL

The body is comprised of EM radiation. It emits EM waves and responds to EM waves. Biological functions correspond to both electromagnetic phenomena and other energies that aren't in the EM spectrum.

Electromedicine covers a vast territory of different energies. The therapies reviewed here—EM radiation, electrical current, oscillating and pulsed magnetic fields, visible monochromatic red light, and FIR (perceived as heat)—are only a few examples. Another example is sound. Although conventional physics does not regard sound as part of the EM spectrum per se, audible sound and compression waves can also be utilized for healing, especially as each tone has a frequency, and every frequency in the EM spectrum would have a corresponding sound if we could hear it.

As we have seen from the small sampling of electromedical approaches and specific equipment, although there's an overlap in their effects, many of them operate differently from each other because they utilize different wavelengths and frequencies on the EM spectrum. Also, some are gentle, while others impact the body more strongly. Some work locally (depending on where they're applied), while others offer a full-body treatment. Some devices can produce Herxheimer reactions more easily than others if they're overused.

One major difference between some of the equipment appears to be their focus: normalization of cell function vs. active devitalization of pathogens. For example, Frequency Specific Microcurrent (FSM) and the basic Avazzia™ instruments deal with cell function. Rife Therapy is targeted to devitalize particular pathogens, although some frequencies are specific to the revitalization of cells only, without directly affecting the pathogens. The Magnetex® clearly causes the release of debris, although it's still unknown whether this debris consists of pathogens, their biofilms, heavy metals, other wastes, or all three. The proper nanometer wavelength of an LED or laser will destroy pathogens as well as normalize tissue. The BEMER® does help with infections, to such an extent that diabetics with gangrenous tissue have avoided surgical amputation due to complete healing of the tissues. However, this tissue restoration is caused by increased microcirculation and not pathogen destruction per se.

One way in which Wave Therapy appears to work is by improving circulation and thus restoring tissue. It may help with the devitalization of pathogens by blasting through biofilms (even though its patent does not state this and these functions are part of its FDA clearance). Because of

these dual functions, great care should be exercised when using this modality. It's reasonable to assume that people suffering from injuries but whose health is otherwise fairly robust, can tolerate more time with the equipment than can those with serious infectious diseases. The likelihood of a Herxheimer reaction means that great care should be taken to ensure that detoxification channels (colon, kidneys, lymph and liver) are functioning well before one begins treatment. Such Wave Therapy subjects should also consider taking the appropriate supplements (discussed in the previous section, **Detoxification Responses**) to help the body mobilize and excrete the toxins that will inevitably be released as a result of the sessions. In fact, these substances are useful to take with any and all therapies that dislodge and discharge toxins from the tissues.

The complementary functions of these modalities gives us good reason to use more than one at the same time. For example, people with Lyme may benefit the most with Wave Therapy and/or the Magnetex® (to move toxic materials out of the cells), followed by Rife plasma sessions (to kill any pathogens that have now become accessible in the bloodstream). The Avazzia™ instruments can target specific injuries (such as a broken rib), and work nicely with LEDs. For pain, the patches from Tuning Element are the simplest to use. For infections, Plasma or PEMF Rife Therapy seems most appropriate, followed by a FIR sauna (which works well for most health issues), and so forth. Of course, EMF protection assists all other modalities, as it does not prevent beneficial frequencies from entering the body. For those who have trouble knowing what to address first, receiving an analysis from a VoiceBio™© practitioner seems prudent (and if desired, the appropriate tones can be used for healing after the analysis has been conducted). The combinations are vast. An experienced and skilled health care provider, or a layperson in touch with his or her body and needs, can use just two modalities to help with a huge variety of issues.

All therapeutic equipment is complemented with EMF protection, such as the jewelry from Eradicator Technologies and Tuning Element, or the VitaSet Generator from Pulsed Technologies. In fact, even those who don't need any remedial machines would be wise to use some form of EMF protection at all times.

It's important to emphasize here that even if results with different modalities are similar or apparently identical, not everyone responds equally to different delivery systems. Also, some people require one delivery system one day and a different one the next. This is why it's valid and proper to have so many different types of electromedical equipment to utilize.

Subtle energies can be extremely potent and have the potential to be utilized for healing. With the EM spectrum, when you target a living cell with the precise frequency it needs, it will respond favorably. The health restoration effects of correctly applied energetics are profound. As countless beneficiaries of electromedical therapies have proven, the correct energies, properly used, play an integral role in any wellness protocol. Electromedicine is truly the healing of the future. Whether you are a health care professional or a seeker of health, these therapies are indispensable for anyone who wants to enjoy a more vibrant and fulfilling life.

Published Studies in Electromedicine

*Don't worry about people stealing an idea.
If it's original, you will have to ram it down their throats.*

—HOWARD AIKEN, AMERICAN COMPUTER PIONEER AND PHYSICIST (1900–1973)

There are thousands of articles in medical and scientific journals on the use of electromagnetic fields, electric fields, electrical current, static magnetic fields, pulsed magnetic fields, frequency-induced diathermy (heat) and more, to treat all kinds of conditions, ranging from bone fractures and muscle sprains to Parkinson's and cancer.

Special mention should be made of treating cancer with hyperthermia: a simple, safe, and effective method. During hyperthermia, most of the body or selected smaller areas are safely subjected to high temperatures. The cancerous tissue is either killed directly by the heat, or it becomes so permeable that only minute amounts of locally injected chemicals are needed to destroy it (thus avoiding the chemical poisoning of the entire system). The clinical use of hyperthermia is not new. It was routinely employed seven thousand years ago in Egypt, and has been used by Western physicians for about 200 years. Yet despite the article “Hyperthermia, still experimental, may win place in cancer therapy”—which appeared in a 1981 issue of the *Journal of the American Medical Association*—few people with cancer today are given the option of receiving heat treatments.

My very small sample lists titles of articles from the most recent back to the 1970s, as well as titles of entire books on electromedical modalities that were published over one

hundred years ago. Of the journal articles, I include peer reviewed titles that for the most part are in English. The therapeutic effects of various EM fields is emphasized, as my purpose here is to cite articles examining the *healing potential of electromagnetic therapies that use frequencies in beneficial ranges and amounts*. For literature on the harm of EM fields—such as from cell phone radiation and high tension wires—see Appendix I, “Recent Studies on the Dangers of Harmful Electromagnetic Fields (EMFs).”

The majority of authors write about the practical applications of frequencies to treat disease conditions that include bone breaks, cancer, neurological degeneration, and infections. Other authors discuss how to evaluate or improve the equipment used to disseminate the therapies, while still others address the effects of different frequencies on specific biological functions, such as enzyme and immune cell production. In a few instances, I mention which frequencies were used in the clinical trials. Some are well known to rifers.

Many of the articles describe Rife's technology without using his name or referring to his research or clinical trials. For example, the abstract of a 2009 paper, “Amplitude-modulated electromagnetic fields for the treatment of cancer: Discovery of tumor-specific frequencies and assessment of a novel therapeutic approach,” states in part:

Because *in vitro* studies suggest that low levels of electromagnetic fields may modify cancer cell growth, we hypothesized that systemic delivery of a combination of tumor-specific frequencies may have a therapeutic effect. We undertook this study to identify tumor-specific frequencies and test the feasibility of administering such frequencies to patients with advanced cancer. . . . Cancer-related frequencies appear to be tumor-specific and treatment with tumor-specific frequencies is feasible, well tolerated and may have biological efficacy in patients with advanced cancer.”¹

The article also mentions that two of the authors have filed a patent on the use of electromagnetic fields for the diagnosis and treatment of cancer—in other words, Rife’s technology!

Despite the fact that Royal Rife is conspicuously absent in medical literature citations, one very recent article does specifically mention the Rife-Bare device as the equipment used in modern experiments: “Is Victory over Pancreatic Cancer Possible, with the Help of Tuned Non-Invasive Physiotherapy? A Case Study Says Yes.” Appearing in a 2014 issue of the *Journal of Cancer Therapy*, the abstract states in part:

Could the conventional treatment of pancreatic cancer effectively be supplemented by a low level and non-invasive bio-electromagnetic treatment? A case study, based on the regular exposure of a patient to an electromagnetic field, EMF, emitted by a Rife-Bare technology device, suggests so. The plasma confined in a tube of this apparatus emitted radiofrequency solitons. [A *soliton* is a wave or pulse that maintains its shape while transmitting at a constant velocity.] These low level emissions were modulated by an “audio” frequency generator, pre-programmed for the treatment of this disease. After less than two months of exposure to these EMFs, the tumor completely disappeared in approximately two weeks. . . . [The biological mechanism of how the machine operates] is characterized by a critical resonance frequency leading the “unicellular” tumoral cell to adopt a self-destructive behavior. On the other hand, EMFs with low level solitons have no effect on the tissues of complex multicellular organisms.”²

Most of the following articles, and thousands more, are at www.emf-portal.org, which links to other sites that display the entire articles or their abstracts.

Note that some of the books are from the 19th century, before antibiotics were invented and became profitable.

“Electrical stimulation enhances the acetylcholine receptors available for neuromuscular junction formation.” Lozano R, Gilmore KJ, Thompson BC, Stewart EM, Waters AM, Romero-Ortega M, Wallace GG. *Acta Biomaterialia*, November 2016; 45:328–339.

“Efficacy and Safety of Treating Glioblastoma With Tumor-Treating Fields Therapy.” Saria MG, Kesari S. *Clinical Journal of Oncology Nursing*, October 1, 2016;20(5 Suppl):S9–S13.

[From Abstract: “Nonbiochemical and nonablative, TTFields use frequency-specific, low-intensity, alternating electric fields to disrupt structures within the cancer cell during mitosis [cell division], leading to apoptosis [cell death]. Specifically, TTFields technology takes advantage of the special characteristics, geometric shape, and the rate of dividing cancer cells, which make them susceptible to the effects of TTFields. TTFields alter tumor cell polarity at an intermediate frequency (100–300 kHz). The frequency used for TTFields is specific to the target cell type (e.g., 200 kHz for gliomas).”]

2015

“Frequency-dependent effects of sequenced pulsed magnetic field on experimental diabetic neuropathy.” Mert T, Gisi G, Celik A, Baran F, Mehdi Uremis M, Gunay I. *International Journal of Radiation Biology*, 91(10):833–842.

“Modulation of cytokine levels in ameliorative effects of pulsed magnetic field on an experimental model of Chronic Constriction Injury.” Mert T, Altun I, Celik A, Sürer T, Gunay I. *International Journal of Radiation Biology*, July 2015; 91(7):596–602.

“Pulsed electromagnetic field therapy promotes healing and microcirculation of chronic diabetic foot ulcers: a pilot study.” Kwan RL, Wong WC, Yip SL, Chan KL, Zheng YP, Cheing GL. *Advances in Skin and Wound Care*. May 2015;28(5):212–219.

2014

“Effect of pulsed electromagnetic field (PEMF) on infarct size and inflammation after cerebral ischemia in mice.” Pena-Philippides JC, Yang Y, Bragina O, Hagberg S, Nemoto E, Roitbak T. *Translational Stroke Research*, August 2014; 5(4):491–500.

“Electrotherapy modalities for adhesive capsulitis (frozen shoulder).” Page MJ, Green S, Kramer S, Johnston RV, McBain B, Buchbinder R. *The Cochrane Database of Systematic Reviews*, October 1, 2014;(10):CD011324.

[The authors discuss a number of different electromedical modalities: Low Level Laser Therapy (LLLT), therapeutic ultrasound, pulsed electromagnetic fields (PEMF), continuous short wave diathermy, Iodex phonophoresis, Iodex iontophoresis, continuous short wave diathermy, and transcutaneous electrical nerve stimulation (TENS).]

2013

"Computational feasibility of deformable mirror microwave hyperthermia technique for localized breast tumors." Arunachalam K, Udpa SS, Udpa L. *International Journal of Hyperthermia* 23(7): 577–589.

"Static magnetic fields enhance skeletal muscle differentiation in vitro by improving myoblast alignment." Coletti D, Teodori L, Albertini MC, Rocchi M, Pristera A, Fini M, Molinaro M, Adamo S. *Cytometry Part A* 71(10): 846–856.

"Carbon nanotube-enhanced thermal destruction of cancer cells in a noninvasive radiofrequency field." Gannon CJ, Cherukuri P, Yakobson BI, Cognet L, Kanzius JS, Kittrell C, Weisman RB, Pasquali M, Schmidt HK, Smalley RE, Curley SA. *Cancer* 110(12): 2654–2665 [13,560,000 Hz].

"The biologic effects and the therapeutic mechanism of action of electric and electromagnetic field stimulation on bone and cartilage: new findings and a review of earlier work." Haddad JB, Obolensky AG, Shinnick P. *Journal of Alternative and Complementary Medicine* 13(5): 485–490.

"Prospective, randomized, single-blind, sham treatment-controlled study of the safety and efficacy of an electromagnetic field device for the treatment of chronic low back pain: a pilot study." Harden RN, Remble TA, Houle TT, Long JF, Markov MS, Gallizzi MA. *Pain Practice* 7(3): 248–255.

"Pulsed radiofrequency: a novel treatment for chronic cervical radicular pain?" Jensen TS. *Pain* 127(1–2): 3–4.

"Alternating electric fields arrest cell proliferation in animal tumor models and human brain tumors." Kirson ED, Dbaly V, Tovarys F, Vymazal J, Soustiel JF, Itzhaki A, Mordecheovich D, Steinberg-Shapira S, Gurvich Z, Schneiderman R, Wasserman Y, Salzberg M, Ryffel B, Goldsher D, Dekel E, Palti Y. *Proceedings of the National Academy of Sciences USA* 104(24): 10152–10157.

"Pulsed radiofrequency for the treatment of chronic ilioinguinal neuropathy." Mitra R, Zeighami A, Mackey S. *Hernia* 11(4): 369–371.

"Low frequency and low intensity pulsed electromagnetic field exerts its antiinflammatory effect through restoration of plasma membrane calcium ATPase activity." Selvam R, Ganesan K, Narayana Raju KV, Gangadharan AC, Manohar BM, Puvanakrishnan R. *Life Sciences* 80(26): 2403–2410.

"A randomized, double-blind, placebo-controlled clinical trial using a low-frequency magnetic field in the treatment of musculoskeletal chronic pain." Thomas AW, Graham K, Prato FS, McKay J, Forster PM, Moulin DE, Chari S. *Pain Research and Management* 12(4): 249–258

"Effectiveness of pulsed electromagnetic field therapy in lateral epicondylitis." Uzunca K, Birtane M, Tastekin N, *Clinical Rheumatology* 26(1): 69–74.

"Effects of pulsed electromagnetic fields on patients' recovery after arthroscopic surgery: prospective, randomized and double-blind study." Zorzi C, Dall'Oca C, Cadossi R, Setti S, *Knee Surgery Sports Traumatology Arthroscopy* 15(7): 830–834.

2006

"Use of a static magnetic field to promote recovery after peripheral nerve injury." Kelleher MO, Al-Abri RK, Lenihan DV, Glasby MA, *Journal of Neurosurgery* 105(4): 610–615.

"Efficacy of pulsed electromagnetic therapy for chronic lower back pain: a randomized, double-blind, placebo-controlled study." Lee PB, Kim YC, Lim YJ, Lee CJ, Choi SS, Park SH, Lee JG, Lee SC, *Journal of International Medical Research* 34(2): 160–167.

"Extremely low frequency 7 Hz 100 microT electromagnetic radiation promotes differentiation in the human epithelial cell line HaCaT." Lisi A, Foletti A, Ledda M, Rosola E, Giuliani L, D'Emilia E, Grimaldi S, *Electromagnetic Biology and Medicine* 25(4): 269–280 [7 Hz].

"Effect of millimeter wave irradiation on tumor metastasis." Logani MK, Szabo I, Makar V, Bhanushali A, Alekseev S, Ziskin MC, *Bioelectromagnetics* 27(4): 258–264.

"Nanosecond pulsed electric fields cause melanomas to self-destruct." Nuccitelli R, Pliquett U, Chen X, Ford W, Swanson RJ, Beebe SJ, Kolb JF, Schoenbach KH, *Biochemical and Biophysical Research Communications* 343(2): 351–360.

"Localized pulsed magnetic fields for tendonitis therapy." Owegi R, Johnson MT, *Biomedical Sciences Instrumentation* 42: 428–433.

"Electromagnetic therapy for treating venous leg ulcers." Ravaghi H, Flemming K, Cullum N, Olyaei Manesh A, *Cochrane Database of Systematic Reviews* (2): CD002933.

"Pulsed radiofrequency denervation for the treatment of sacroiliac joint syndrome." Vallejo R, Benyamin RM, Kramer J, Stanton G, Joseph NJ, *Pain Medicine* 7 (5): 429–434.

2005

"Ice and pulsed electromagnetic field to reduce pain and swelling after distal radius fractures." Cheing GL, Wan JW, Kai Lo S, *Journal of Rehabilitation Medicine* 37(6): 372–377 [50 Hz, pulsed].

"Effect of millimeter waves on natural killer cell activation." Makar VR, Logani MK, Bhanushali A, Kataoka M, Ziskin MC, *Bioelectromagnetics* 26(1): 10–19.

"Magnetically labeled human natural killer cells, accumulated in vitro by an external magnetic force, are effective against HOS osteosarcoma cells." Nakashima Y, Deie M, Yanada S, Sharman P, Ochi M, *International Journal of Oncology* 27(4): 965–971.

"Slow transcranial magnetic stimulation can rapidly reduce resistant auditory hallucinations in schizophrenia." Poulet E, Brunelin J, Bediou B, Bation R, Forgeard L, Dalery J, d'Amato T, Saoud M, *Biological Psychiatry* 57(2): 188–191.

"Do magnetic fields cause increased risk of childhood leukemia via melatonin disruption?" Henshaw DL and Reiter RJ. *Bioelectromagnetics*; Supplement 7: S86–97.

"Transcranial magnetic stimulation accelerates the antidepressant effect of amitriptyline in severe depression: a double-blind placebo-controlled study." Rumi DO, Gattaz WF, Rigonatti SP, Rosa MA, Fregni F, Rosa MO, Mansur C, Myczkowski ML, Moreno RA, Marcolin MA, *Biological Psychiatry* 57(2): 162–166.

2004

"High-frequency pulsed electromagnetic energy in tinnitus treatment." Ghossaini SN, Spitzer JB, Mackins CC, Zschommler A, Diamond BE, Wazen JJ, *Laryngoscope* 114(3): 495–500.

"Disruption of cancer cell replication by alternating electric fields." Kirson ED, Gurvich Z, Schneiderman R, Dekel E, Itzhaki A, Wasserman Y, Schatzberger R, Palti Y, *Cancer Research* 64(9): 3288–3295.

"Effects of low-intensity ultrahigh frequency electromagnetic radiation on inflammatory processes." Lushnikov KV, Shumilina YV, Yakushina VS, Gapeev AB, Sadovnikov VB, Chemeris NK, *Bulletin of Experimental Biology and Medicine* 137(4): 364–366.

"Experimental study of a novel thermotherapy for hepatocellular carcinoma using a magnesium ferrite complex powder that produces heat under a magnetic field." Muraoka A, Takeda S, Matsui M, Shimizu T, Tohnai I, Akiyama S, Nakao A, *Hepatogastroenterology* 51(60): 1662–1666.

"A multicenter clinical trial on the use of pulsed electromagnetic fields in the treatment of temporomandibular disorders." Peroz I, Chun YH, Karageorgi G, Schwerin C, Bernhardt O, Roulet JF, Freesmeyer WB, Meyer G, Lange KP, *Journal of Prosthetic Dentistry* 91(2): 180–187.

"Low electric field enhanced chemotherapy can cure mice with CT-26 colon carcinoma and induce anti-tumour immunity." Plotnikov A, Fishman D, Tichler T, Korenstein R, Keisari Y, *Clinical and Experimental Immunology* 138(3): 410–416.

"Induction of apoptosis and necrosis in cancer cells by electric fields, electromagnetic fields, and photodynamically active quinoids." Radeva M, Berg A, Berg H, *Electromagnetic Biology and Medicine* 23(3): 185–200.

2003

"Radiofrequency for the treatment of allergic rhinitis refractory to medical therapy." Lin HC, Lin PW, Su CY, Chang HW, *Laryngoscope* 113(4): 673–678 [465 Hz].

"The use of pulsed electromagnetic fields with complex modulation in the treatment of patients with diabetic polyneuropathy." Musaev AV, Guseinova SG, Imamverdieva SS, *Neuroscience and Behavioral Physiology* 33(8): 745–752.

"The effect of the pulsatile electromagnetic field in children suffering from bronchial asthma." Sadlonova J, Korpas J, Salat D, Miko L, Kudlicka J, *Acta Physiologica Academiae Scientiarum Hungaricae* 90(4): 327–334.

"Extended two-year results of radio-frequency energy delivery for the treatment of fecal incontinence (the Secca procedure)." Takahashi T, Garcia-Osogobio S, Valdovinos MA, Belmonte C, Barreto C, Velasco L, *Diseases of the Colon and Rectum* 46(6): 711–715.

"Treatment of chronic pain with millimetre wave therapy (MWT) in patients with diffuse connective tissue diseases: a pilot case series study." Usichenko TI, Herget HF, *European Journal of Pain* 7(3): 289–294.

"Pulsed radiofrequency treatment of the Gasserian ganglion in patients with idiopathic trigeminal neuralgia." van Zundert J, Brabant S, Van de Kelft E, Vercruyssen A, Van Buyten JP, *Pain* 104(3): 449–452.

2002

"Healing of chronic arterial and venous leg ulcers with systemic electromagnetic fields." Canedo-Dorantes L, Garcia-Cantu R, Barrera R, Mendez-Ramirez I, Navarro VH, Serrano G, *Archives of Medical Research* 33(3): 281–289.

"The effect of pulsed electromagnetic fields on the osteointegration of hydroxyapatite implants in cancellous bone: a morphologic and microstructural in vivo study." Fini M, Cadossi R, Cane V, Cavani F, Giavaresi G, Krajewski A, Martini L, Aldini NN, Ravaglioli A, Rimondini L, Torricelli P, Giardino R, *Journal of Orthopaedic Research* 20(4): 756–763.

"Effects of static magnets on chronic knee pain and physical function: a double-blind study." Hinman MR, Ford J, Heyl H, *Alternative Therapies in Health and Medicine* 8(4): 50–55.

"Radio-frequency energy delivery to the anal canal for the treatment of fecal incontinence." Takahashi T, Garcia-Osogobio S, Valdovinos MA, Mass W, Jimenez R, Jauregui LA, Bobadilla J, Belmonte C, Edelstein PS, Utley DS, *Diseases of the Colon and Rectum* 45(7): 915–922.

"Evaluation of electromagnetic fields in the treatment of pain in patients with lumbar radiculopathy or the whiplash syndrome." Thuile C, Walzl M, *NeuroRehabilitation* 17(1): 63–67.

"Functional magnetic stimulation facilitates gastric emptying." Lin VW, Kim KH, Hsiao I, Brown W, *Archives of Physical Medicine and Rehabilitation* 83(6): 806–810.

2001

"Experimental clinical study of the effect of millimeter waves on microbial and inflammatory renal diseases." Bagdasarova IV, Rudenko AV, Tumanyants EN, *CRC Critical reviews in Biomedical Engineering* 29(5–6): 635–643.

"Mechanical and electromagnetic induction of protection against oxidative stress." Di Carlo AL, White NC, Litovitz TA, *Bioelectrochemistry* 53(1): 87–95.

"Electromagnetic therapy for the treatment of venous leg ulcers." Flemming K, Cullum N, *Cochrane Database of Systematic Reviews* (1): CD002933.

"The efficacy of ununited tibial fracture treatment using pulsing electromagnetic fields: relation to biological activity on nonunion bone ends." Ito H, Shirai Y, *Journal of Nippon Medical School* 68(2): 149–153.

"Effect of a wound healing electromagnetic field on inflammatory cytokine gene expression in rats." Jasti AC, Wetzel BJ, Aviles H, Vesper DN, Nindl G, Johnson MT, *Biomedical Sciences Instrumentation* 37: 209–214.

"Electromagnetic fields used clinically to improve bone healing also impact lymphocyte proliferation in vitro." Johnson MT, Vanscoy-Cornett A, Vesper DN, Swez JA, Chamberlain JK, Seaward MB, Nindl G, *Biomedical Sciences Instrumentation* 37: 215–220.

"Transurethral microwave therapy of the prostate." McEwen DR, Alejos P, *Seminars in Perioperative Nursing* 10(1): 17–23.

"Magnetic field therapy for epilepsy." McLean M, Engstrom S, Holcomb R, *Epilepsy and Behavior* 2: S81–S89.

"Electromagnetic phased arrays for regional hyperthermia: optimal frequency and antenna arrangement." Seebass M, Beck R, Gellermann J, Nadobny J, Wust P, *International Journal of Hyperthermia* 17(4): 321–336.

"Therapeutic electromagnetic field effects on angiogenesis and tumor growth." Williams CD, Markov MS, Hardman WE, Cameron IL, *Anticancer Research* 21 (6A): 3887–3891.

"A historical perspective of the popular use of electric and magnetic therapy." Basford JR, *Archives of Physical Medicine and Rehabilitation* 82(9): 1261–1269.

"Electrochemical treatment of mouse Ehrlich tumor with direct electric current." Cabrales LB, Ciria HC, Bruzon RP, Quevedo MS, Aldana RH, De Oca LM, Salas MF, Od Pena, *Bioelectromagnetics* 22(5): 316–322.

"Low-amplitude, extremely low frequency magnetic fields for the treatment of osteoarthritic knees: a double-blind clinical study." Jacobson JI, Gorman R, Yamanashi WS, Saxena BB, Clayton L, *Alternative Therapies in Health and Medicine* 7(5): 54–64, 66–69.

"Effect of a wound healing electromagnetic field on inflammatory cytokine gene expression in rats." Jasti AC, Wetzel BJ, Aviles H, Vesper DN, Nindl G, Johnson MT, *Biomedical Sciences Instrumentation* 37: 209–214.

"A study of millimeter wave's clinical and immunological effects on oral lichen planus patients." [not in English] Jin Z, Lin M, Xia J, Zhuang J, Yang R, Li X, He Y, *Hua Xi Kou Qiang Yi Xue Za Zhi (West China Journal of Stomatology)* 19(6): 366–368.

"Electromagnetic fields used clinically to improve bone healing also impact lymphocyte proliferation in vitro." Johnson MT, Vanscoy-Cornett A, Vesper DN, Swez JA, Chamberlain JK, Seaward MB, Nindl G, *Biomedical Sciences Instrumentation* 37: 215–220.

"Magnetic field therapy for epilepsy." McLean M, Engstrom S, Holcomb R, *Epilepsy and Behavior* 2: S81–S89.

2000

"Hyperthermia and radiotherapy for inoperable squamous cell carcinoma metastatic to cervical lymph nodes from an unknown primary site." Amichetti M, Romano M, Cristoforetti L, Valdagni R, *International Journal of Hyperthermia* 16(1): 85–93.

"Blood-specific whole-body electromagnetic hyperthermia." Babincova M, Sourivong P, Leszczynska D, Babinec P, *Medical Hypotheses* 55(6): 459–460.

"Minimally invasive treatment of malignant hepatic tumors: at the threshold of a major breakthrough." Dodd 3rd GD, Soulen MC, Kane RA, Livraghi T, Lees WR, Yamashita Y, Gillams AR, Karahan OI, Rhim H, *Radiographics* 20(1): 9–27.

"Transcranial magnetic stimulation and auditory hallucinations in schizophrenia." Hoffman RE, Boutros NN, Hu S, Berman RM, Krystal JH, Charney DS, *Lancet* 355(9209): 1073–1075.

"Damage induction by direct electric current in tumoural target cells." Holandino C, Veiga VF, Capella MM, Menezes S, Alviano CS, *Indian Journal of Experimental Biology* 38(6): 554–558.

"Static magnetic field therapy for pain in the abdomen and genitals." Holcomb RR, Worthington WB, McCullough BA, McLean MJ, *Pediatric Neurology* 23(3): 261–264.

"Development of inductive regional heating system for breast hyperthermia." Kotsuka Y, Watanabe M, Hosoi M, Isono I, Izumi M, *IEEE Transactions on Microwave Theory and Techniques* 48(11): 1807–814.

"The use of millimeter wavelength electromagnetic waves in cardiology." Lebedeva AY, *CRC Critical reviews in Biomedical Engineering* 28(1–2): 339–347.

"Experiments showing that electromagnetic fields can be used to treat inflammatory diseases." Nindl G, Balcavage WX, Vesper DN, Swez JA, Wetzel BJ, Chamberlain JK, Fox MT, *Biomedical Sciences Instrumentation* 36: 7–13.

1999

"An imposed oscillating electrical field improves the recovery of function in neurologically complete paraplegic dogs." Borgens RB, Toombs JP, Breur G, Widmer WR, Waters D, Harbath AM, March P, Adams LG, *Journal of Neurotrauma* 16(7): 639–657.

"A pilot study on the extremely low frequency (ELF) pulsing magnetic field (PMF) effect on soft tissue injuries: a preliminary analysis of the results." Baldi E, Lithgow B, Heath B, Cohen M, Cosic I, Grace RJ, *Medical and Biological Engineering and Computing* 37: 103–104.

"Electroporation therapy: a new approach for the treatment of head and neck cancer." Hofmann GA, Dev SB, Dimmer S, Nanda GS, *IEEE Transactions on Biomedical Engineering* 46(6): 752–759.

"Using a direct current electrical field to promote spinal-cord regeneration." Shen NJ, Wang SC, *Journal of Reconstructive Microsurgery* 15(6): 427–431.

"Low-frequency repetitive transcranial magnetic stimulation improves intractable epilepsy." Tergau F, Naumann U, Paulus W, Steinhoff BJ, *Lancet* 353(9171): 2209.

"Magnetic mattress pad use in patients with fibromyalgia: a randomized double-blind pilot study." Colbert AP; Markov M, Banerji M, Pilla A. *Journal of Back and Musculoskeletal Rehabilitation*, July 1, 1999, Volume 13, Number 1, 19–31.

1998

"Percutaneous electrical nerve stimulation: an alternative to antiviral drugs for acute herpes zoster." Ahmed HE, Craig WF, White PF, Ghoname ES, Hamza MA, Gajraj NM, Taylor SM, *Anesthesia and Analgesia* 87(4): 911–914.

"Treatment with AC pulsed electromagnetic fields normalizes the latency of the visual evoked response in a multiple sclerosis patient with optic atrophy." Sandyk R, *International Journal of Neuroscience* 93(3–4): 239–250.

"Initial exploration of pulsing electromagnetic fields for treatment of migraine." Sherman RA, Robson L, Marden LA, *Headache* 38(3): 208–213.

1997

"Electrochemical treatment of mouse and rat fibrosarcomas with direct current." Chou CK, McDougall JA, Ahn C, Vora N, *Bioelectromagnetics* 18(1): 14–24.

"Multicentre experience with combined hyperthermia and radiation therapy in the treatment of superficially located non-Hodgkin's lymphomas." Donato V, Zurlo A, Nappa M, Capua A, Banelli E, Martelli M, Gabriele P, Amichetti M, Biagini C, *Journal of Experimental and Clinical Cancer Research* 16(1): 87–90.

"The results of a double-blind trial of pulsed electromagnetic frequency in the treatment of Perthes disease." Harrison MH, Bassett CA, *Journal of Pediatric Orthopaedics* 17(2): 264–265.

"DC electrical stimulation for chronic wound healing enhancement." Karba R, Semrov D, Vodovnik L, Benko H, Savrin R, *Bioelectrochemistry and Bioenergetics* 43(2): 265–270.

1996

"Application of weak electromagnetic fields facilitates sensory-motor integration in patients with multiple sclerosis." Sandyk R, *International Journal of Neuroscience* 85(1–2): 101–110.

"Treatment with electromagnetic field alters the clinical course of chronic progressive multiple sclerosis—a case report." Sandyk R, *International Journal of Neuroscience* 88(1–2): 75–82.

"Microwave diathermy treatment for primary dysmenorrhea." Vance AR, Hayes SH, Spielholz NI, *Physical Therapy* 76(9): 1003–1008.

1995

"A novel electric design for electromagnetic stimulation—the Slinky coil." Ren C, Tarjan PP, Popovic DB, *IEEE Transactions on Biomedical Engineering* 42(9): 918–925.

"Improvement of right hemispheric functions in a child with Gilles de la Tourette's syndrome by weak electromagnetic fields." Sandyk R, *International Journal of Neuroscience* 81(3–4): 199–213.

"Chronic relapsing multiple sclerosis: a case of rapid recovery by application of weak electromagnetic fields." Sandyk R, *International Journal of Neuroscience* 82(3–4): 223–242.

"Effectiveness of electrochemical treatment of primary pulmonary malignant tumors." Song Y, Zhang X, Du X, Wang Z, Chen Y, *Chinese Medical Journal* 108(1): 66–67.

1994

"Treatment of osteonecrosis of the femoral head with electrical stimulation." Aaron RK, *Instructional Course Lectures* 43: 495–98.

"Electromagnetic stimulation of the auditory system of deaf patients." Counter SA, Borg E, Bredberg G, Linde G, Vainio M, *Acta Otolaryngologica* 114(5): 501–509.

"Electrochemical therapy of pelvic pain: effects of pulsed electromagnetic fields (PEMF) on tissue trauma." Jorgensen WA, Frome BM, Wallach C, *European Journal of Surgical Supplies* 574: 83–86.

"Alzheimer's disease: improvement of visual memory and visuoconstructive performance by treatment with picotesla range magnetic fields." Sandyk R, *International Journal of Neuroscience* 76(3–4): 185–225.

"Improvement in word-fluency performance in Parkinson's disease by administration of electromagnetic fields." Sandyk R, *International Journal of Neuroscience* 77(1–2): 23–46.

1993

"Therapeutic effects of electromagnetic fields in the stimulation of connective tissue repair." Aaron RK, Ciombor DM, *Journal of Cellular Biochemistry* 52(1): 42–46.

"Pain control using high-intensity pulsed magnetic stimulation." Ellis WV, *Bioelectromagnetics* 14(6): 553–556.

1992

"Magnetic facial nerve stimulation in Bell's palsy." Rimpilainen I, Karma P, Laranne J, Eskola H, Hakkinen V, *Acta Otolaryngologica* 112(2): 311–316.

"Therapeutic effects of pulsed magnetic fields on joint diseases." Riva Sanseverino E, Vannini A, Castellacci P, *Panminerva Medica* 34(4): 187–196.

"The influence of the pineal gland on migraine and cluster headaches and effects of treatment with picoTesla magnetic fields." Sandyk R, *International Journal of Neuroscience* 67(1–4): 145–171 [2 Hz to 7 Hz].

1991

"Magnetic stimulation in the treatment of partial seizures." Anninos PA, Tsagas N, Sandyk R, Derpapas K. *International Journal of Neuroscience*, October 1991;60(3–4):141–171.

"Long-term follow-up of fracture nonunions treated with PEMFs." Garland DE, Moses B, Salyer W. *Contemporary Orthopaedics*, March 1991; 22(3):295–302.

1990

"Pulsed high frequency (27 MHz) electromagnetic therapy for persistent neck pain. A double blind, placebo-controlled study of 20 patients." Foley-Nolan D, Barry C, Coughlan RJ, O'Connor P, Roden D, *Orthopaedics* 13(4): 445–451.

"Bone density changes in osteoporosis-prone women exposed to pulsed electromagnetic fields (PEMFs)." Tabrah F, Hoffmeier M, Gilbert Jr F, Batkin S, Bassett CA, *Journal of Bone and Mineral Research* 5(5): 437–442.

1989

"Radio frequency (13.56 MHz) energy enhances recovery from mild hypothermia." Hesslink RL, Pepper S, Olsen RG, Lewis SB, Homer LD, *Journal of Applied Physiology* 67(3): 1208–1212.

"Prevention of osteoporosis by pulsed electromagnetic fields." Rubin CT, McLeod KJ, Lanyon LE, *Journal of Bone and Joint Surgery—American Volume* 71(3): 411–417.

1988

"Treatment of the damaged rat hippocampus with a locally applied electric field." Politis MJ, Zanakakis MF. *Experimental Brain Research* 1988; 71(1):223–226.

"The use of DC electric fields to promote regeneration in the mammalian nervous system." Zanakakis MF. *ASAIO Transactions*, October–December 1988;34(4):947–951.

1986

"Effect of external pulsing electromagnetic fields on the healing of soft tissue." Glassman LS, McGrath MH, Bassett CA, *Annals of Plastic Surgery* 16(4): 287–295.

1985

"Microwave hyperthermia for brain tumors." Winter A, Laing J, Paglione R, Sterzer F, *Neurosurgery* 17(3): 387–399.

1984

"Use of pulsed electromagnetic fields in Perthes disease: report of a pilot study." Harrison MH, Bassett CA, *Journal of Pediatric Orthopaedics* 4(5): 579–584.

"Design and thermometry of an intracavitary microwave applicator suitable for treatment of some vaginal and rectal cancers." Li DJ, Luk KH, Jiang HB, Chou CK, Hwang GZ, *International Journal of Radiation Oncology Biology Physics* 10(11): 2155–2162.

"Results of pulsed electromagnetic fields (PEMFs) in ununited fractures after external skeletal fixation." Marcer M, Musatti G, Bassett CA, *Clinical Orthopaedics and Related Research* (190): 260–265.

"Whole-body hyperthermia induction techniques." Milligan AJ, *Cancer Research* 44 (10 Supplement): 4869S–4872S.

1983

"Review of pulsing electromagnetic field therapy and its possible application to horses." Auer JA, Burch GE, Hall P, *Equine Veterinary Journal* 15(4): 354–360.

"Effects of pulsing electromagnetic fields on bone growth and articular cartilage." Smith RL, Nagel DA, *Clinical Orthopaedics and Related Research* (181): 277–282.

"Electromagnetic applicators for regional and whole-body hyperthermia." Wahid PF, Hagmann MJ, Gandhi OP, *Physics in Medicine and Biology* 28(3): 301–307.

1982

"Pulsing electromagnetic field treatment in ununited fractures and failed arthrodeses." Bassett CA, Mitchell SN, Gaston SR, *Journal of the American Medical Association* 247(5): 623–628.

"Clinical experiences with combined hyperthermia and radiotherapy in the treatment of cancer." Friedenthal E, Mendecki J, Botstein C, Sterzer F, Paglione R, Nowogrodzki M, *Progress in Clinical and Biological Research* 107: 751–760.

1981

"A new approach to microwave hyperthermia therapy for cancer." Heinmets F, *Physiological Chemistry and Physics and Medical NMR* 13(6): 561–564.

"Hyperthermia, still experimental, may win place in cancer therapy." Johnson RS, *Journal of the American Medical Association* 245(11): 1109–1116.

1980

"Microwave applicators for localized hyperthermia treatment of cancer of the prostate." Mendecki J, Friedenthal E, Botstein C, Paglione R, Sterzer F, *International Journal of Radiation Oncology Biology Physics* 6(11): 1583–1588.

"Microwave adjuvant to radiotherapy and chemotherapy for advanced lymphoma." Nelson AJ, Holt JA, *Medical Journal of Australia* 1(7): 311–313.

1979

"Microwave diathermy: the invisible healer." Greene J, *FDA Consumer* 13(1): 7–11.

"Electromagnetic fields and skin wound repair." Romero-Sierra C, Halter S, Tanner JA, Roomi MW, Crabtree D, *Journal of Microwave Power and Electromagnetic Energy* 10(1): 59–70.

1974

"Augmentation of bone repair by inductively coupled electromagnetic fields." Bassett CA, Pawluk RJ, Pilla AA, *Science* 184(136): 575–577.

"The effects of pulsed electromagnetic energy on peripheral nerve regeneration." Wilson DH, Jagadeesh P, Newman PP, Harriman DG, *Annals of the New York Academy of Sciences* 238: 575–585.

1968

"Effects of coherent electromagnetic fields on the neoplastic malignant process." [Czech] Pokorný J, Jelinek V, *Casopis Lékárů Ceskych*, April 12, 1968; 107(16): 474–482.

Note: For this next section, all of which are books, detailed descriptions are included to give readers an idea of the scope of electromedical therapies offered (in both clinics and hospitals), and the medical community's openness to electromedicine. In most cases, the title pages contained a great deal of text, a some of which is reproduced here. Due to the amount of text, it was sometimes difficult to discern between the actual titles and the explanatory subtitling.

Thousands of titles were available in the 1880s and some were published even earlier in the 1700s. For historical interest, the degrees of the authors are included where applicable. All of these books are available in eBook form online, without charge.

1946

Richard Kovačs, M.D. *Electrotherapy and Light Therapy, 5th Ed.* (Philadelphia: Lea & Febiger, 1946).

[Subtitled: *with the Essentials of Hydrotherapy and Mechanotherapy.* This is a major work in the field. Topics include electrophysics; generation, measurement and transfer of electrical charges; effects of currents, injury vs. harm, and passage through all parts of the body; electrodiagnosis; galvanic current and ion transfer; low-frequency current and apparatus; high-frequency current and apparatus; medical diathermy; hyperthermy; electrosurgery; electrical injuries; physics of radiant energy; infrared, ultraviolet and luminous radiation; helio or sun therapy; hydrotherapy; massage; exercise; physical therapies. There are also lengthy chapters on treating, with electromedicine, afflictions of the respiratory tract; central and peripheral nervous system; bones, joints, muscles and tendons; genital tract; urinary tract; cardiovascular system; ear, nose and throat; eyes; and gastrointestinal tract (which includes metabolic conditions). Arthritis and fibrosis (fibromyalgia) are also addressed. The author gives detailed instructions on what electromedical equipment to use for what ailment.]

1920

F. Miramond de Laroquette, M.D. *Atlas for Electro-Diagnosis and Therapeutics* (London: Bailliere, Tindall and Cox, 1920).

George Knapp Abbott, A.B., M.D. *Essentials of Medical Electricity for Medical Students and Nurses* (Philadelphia and London: W.B. Saunders Company, 1920).

1910

J. H. Kellogg, M.D. *Light Therapeutics: A Practical Manual of Phototherapy for the Student and the Practitioner, with Special Reference to the Incandescent Electric-Light Bath* (Battle Creek, Mich.: The Good Health Publishing Co.).

[The author is none other than John Harvey Kellogg, who headed a world-famous sanitarium or "health spa" that hosted a range of clients, some of them famous (the Roosevelts, Charles Lindburgh, Mary Todd Lincoln, Sojourner Truth, and Amelia Earhart). Kellogg was later known for creating a breakfast food, corn flakes, and starting a cereal company. His "incandescent electric-light bath" was the first far infrared sauna, which used special light bulbs created by Kellogg's friend Thomas Edison. The title page lists his credentials as follows: "Author of "Rational Hydrotherapy," "The Art of Massage," etc. Member of the British Gynaecological Society, the International Periodical Congress of Gynaecology and Obstetrics, American and British Associations for the Advancement of Science, the Société d'Hygiène of France, American Society of Microscopists, American Climatological Society, American Medical Association, Michigan State Medical Society, Superintendent of the Battle Creek (Mich.) Sanitarium."]

1904

Toby Cohen ("nerve specialist, Berlin") and Francis A. Scratchley, M.D. *Electro-Diagnosis and Electro-Therapeutics: A Guide for Practitioners and Students* (New York and London: Funk & Wagnalls Company, 1904).

Margaret A Cleaves, M.D. *Light Energy: Its Physics, Physiological Action and Therapeutic Applications* (New York and London: Rebman Company and Rebman Limited, 1904).

[The author's credentials and affiliations are given on the title page as follows: "Fellow of the New York Academy of Medicine; Fellow of the American Electro-Therapeutic Association; Member of the New York County Medical Society; Fellow of the Societe Francaise d'Electrotherapie; Fellow of the American Electro-Chemical Society; Member of the Society of American Authors; Member of the New York Electrical Society; Professor of Light Energy in the New York School of Physical Therapeutics; Late Instructor in Electro-Therapeutics in the New York Post-Graduate Medical School."]

1902

W.F. Brady, M.D. et al. *A System of Electrotherapeutics, Volume 6: Electrotherapy* (Scranton: International Textbook Company, 1902).

Dr. Wilhelm Winternitz (Professor of Clinical Medicine in the University of Vienna; Director of the General Polyclinic in Vienna), assisted by Dr. Alois Strasser (Instructor in Clinical Medicine at the University of Vienna) and Dr. B. Buxbaum (Chief Physician of the Hydrotherapeutic Institute in Vienna) and Dr. E. Heinrich Kisch (Professor in the University of Prague; Physician at Marienbad Spa). *Hydrotherapy, Thermotherapy, Heliotherapy, and Phototherapy, Volume IX. A System of Physiologic Therapeutics: A Practical Exposition of the Methods, Other than Drug-Giving, Useful in the Prevention of Disease and in the treatment of the Sick.*

S.H. Monell, M.D. *X-Ray Methods and Medical Uses of Light, Hot-Air, Vibration and High-Frequency Currents.* (New York: E.R. Pelton, 1902)

William Benham Snow, M.D. (Editor). *The Journal of Advanced Therapeutics, Volume XXI* (A.L. Chatterton & Co., 1902).

[Many medical professionals contributed to Snow's journals, which included information on all types of diseases and their treatment with phototherapy, thermotherapy, hydrotherapy, diet, therapeutic exercise, psychotherapy, and "mechanical vibration therapy." Volume XXI was published in 1902 and Volume XXXI (also available online) was published in 1913, one volume per year. Therefore, we can guess that the first volume of *Journal of Advanced Therapeutics* was probably published in 1882.]

1886

Elizabeth J. French. *A New Path in Electrical Therapeutics* (Philadelphia: J.B. Lippincott Company, 1886).

[Also appearing on title page: Electrical Therapeutics: An Account of the Author's Great Discovery of Electrical Cranial Diagnosis, and the Scientific Application of Different Currents of Electricity to the Cure of Disease. A Brief Treatise on Anatomy and Physiology. An Historical Account of the Discoveries in Magnetism and Electricity, the Progress of Medical Science, and Brief Sketches of the Lives of Eminent Practitioners, from the Earliest Ages to the Present Century; Also a Thorough System of Hygiene; to which are Added Plain Directions for the Treatment of Disease by the Author's System of Electrical Applications.]

1883

Dr. Wilhelm Erb, professor in the University of Leipzig; Translated by L. Putzel, M.D. (Neurologist to Randall's Island Hospital, and Physician to the Clinic for Nervous Diseases, Bellevue Out-Door Department, etc.). *Handbook of Electro-Therapeutics* (New York: William Wood & Company, 1883).

[Contains an extensive chapter outline on many topics: electronics, physiology, physical examination, electro-diagnosis, general electro-therapeutics, diseases, and conditions of the urinary tract, sexual organs, nervous system, muscles, glands, digestive system, and more.]

1878

Edwin D. Babbitt. *The Principles of Light and Color* (New York: Babbitt & Co., 1878).

John Butler, M.D., L.R.C.P.E., L.R.C.S.I. *Electro-Therapeutics and Electro-Surgery* (New York and Philadelphia: Boericke & Tafel, 1878).

1877

Gen. A.J. Pleasonton and Others. *The Influence of the Blue Ray of the Sunlight and of the Blue Colour of the Sky, in developing animal and vegetable life: in arresting disease, and in restoring health in acute and chronic disorders to human and domestic animals* (Philadelphia: Claxton, Remsen & Haffelfinger, 1877).

Herbert Tibbits, M.D., F.R.C.P.E. *How To Use a Galvanic Battery in Medicine and Surgery, 2nd Ed.*

Rife Research in the United States

*Only a fool of a scientist would dismiss the evidence and reports in front of him
and substitute his own beliefs in their place.*

—PAUL KURTZ, PhD (BORN 1925)

PROFESSOR, AUTHOR, EDITOR, PUBLISHER, ALSO KNOWN AS THE “FATHER OF SECULAR HUMANISM”

In August 2009, scientific research was begun in Philadelphia, Pennsylvania, that involved the assistance of established (mainstream) medical personnel and actually included the name “Rife” in its title. Anthony G. Holland, PhD, a music professor known for his conducting, composing and performing, had learned of Rife therapy and recognized its value. With the cooperation of inventor-chiropractor James Bare, he made several presentations with a Bare-Rife plasma frequency device and secured the help of several scientists, including the director of a cancer lab who has a PhD in oncology from Johns Hopkins University.

Dr. Holland’s background in digital waveform synthesis and analysis, acoustics and physics—along with his interest in health and frequency therapy—made him ideal to organize and supervise the research team. The research, which is ongoing, is called “Plasma Emission Field Treatment,” or PEFT. Novobiotronics Inc., a non-profit corporation (www.novobiotronics.com), was formed to fund the studies showing the effects of the Bare-Rife device on cancer cells and pathogens. (The company calls the equipment a “Rife-Bare” device. Like some other rifers, I put Bare’s name first because the machine is contemporary and was not designed by Rife.)

The researchers are still collecting data and plan to publish the results of this and future experiments, the identities of all team members, and the frequencies and pulse rates used with the many experimental cell cultures.

There is more information to be learned; but so far, the results are very promising. The Bare-Rife machine has proven capable of destroying, *in vitro*, pancreatic, ovarian and leukemia cancer cells, as well as slowing their growth. The earliest experiments on human pancreatic cancer cells caused dramatic changes in cell *morphology*, which is the size and shape of cells. These changes can cause cells to grow at a slower rate than normal (desirable in the case of cancer).

“The cancer cells,” Dr. Holland explained in an email correspondence sent July 13, 2011, “are grown in special plastic dishes . . . where they establish themselves and start to grow very rapidly, much the way a cancer tumor grows in the human body. . . . It’s very easy for the cancer researchers to simply count how many cancer cells were killed by the new treatment.”

Data from the leukemia cell experiment is shown on the next page. This particular test, under the auspices of Dr. Holland, was conducted over the course of four months from 2009–2010, at the Division of Surgical Research of Thomas Jefferson University Medical College, with a special prototype plasma device designed and built by Dr. James Bare. The data shows that certain types of cancer cells can be killed *in vitro* (graph, left) and simultaneously slowed in their growth rate (graph, right). The term “pulsed” in the charts refers to cells that were exposed to the Bare-Rife machine.

Above: Human leukemia cells breaking up under PEFT.
The same three leukemia cells are shown throughout the montage.
Two cells are undergoing a morphological transformation
and eventual breakup, caused solely by PEFT.

Photomontage and charts courtesy of Dr. Anthony G. Holland, Novobiotronics Inc.

At-A-Glance Review of Common Toxic Chemicals

“Growth” and “progress” are among the key words in our national vocabulary. But modern man now carries Strontium 90 in his bones . . . DDT in his fat, asbestos in his lungs. A little more of this “progress” and “growth,” and this man will be dead.

—MORRIS K. “MO” UDALL, PhD (1922–1998)

PROFESSIONAL BASKETBALL PLAYER, ATTORNEY, AND STATE OF ARIZONA CONGRESSMEMBER

The following pages contain an overview of common chemicals we use in our daily lives. Not all of the chemicals produce every single damaging effect that’s listed. However, an overall pattern emerges. Most of the chemicals listed are dangerous, and only a few are safe or relatively safe. Carefully read the labels of whatever products you buy or use.

Keep in mind that this is not a comprehensive list, as thousands of new chemicals are created each year. However, this Appendix provides some basic guidelines so you know what to look for when you purchase products ranging from personal care items to carpeting. As more people refuse to purchase products that destroy our health and pollute the environment, manufacturers will seek safer substitutes to comply with the demands of the marketplace.

To keep current with safety information on already existing chemicals and new chemicals that are constantly being manufactured, go to the online database of the Environmental Working Group (which also has a cosmetics section): www.ewg.org. The EWG database grades chemicals according to risk levels—high, medium, or low risk.

Relative risk is an important consideration. If you have a generally useful product that contains mostly safe ingredients and just one or a few synthetic chemicals whose toxicity risks are quite low, it might be worth using it. The EWG database can help you decide.

The data on the following pages were obtained from a number of different sources. Keep yourself informed, as older chemicals are often phased out when new chemicals are created.

ALCOHOLS (SOLVENTS)—ACIDS AND ALKALI

Overview

A solvent is any material that can dissolve solid material and turn it into a liquid. Therefore, by nature solvents are highly corrosive, and their pH must be either very low (as acids) or very high (as alkali or bases). Some solvents are so potent that they can remove barnacles from boats. This is very impressive, considering that the small-shell marine barnacle produces a strong natural glue (after which Super Glue® has been modeled) that allows it to permanently adhere to stationary objects. Strong solvents can liquefy the tough and durable barnacle, so you can imagine how easily they can dissolve baked-on food—or eat through living tissue, should the liquid get in the eyes or on the skin.

Unfortunately, solvents are routinely used to process herbs and spices. According to United States federal law, solvents are permitted in spices at a level up to 50 ppm (parts per million). In small amounts solvents will not kill, but they can cause major health problems. As many solvents are made from petrochemicals, also see **Petrochemicals/Plastics**. You will find some duplications in the two categories.

Lye is a necessary ingredient used to make soap all over the world. It transforms the fats and oils and is used up in the process of soapmaking. The lye potassium hydroxide creates liquid soap, and the lye sodium hydroxide creates solid (bar) soap. Finished soap made with lye should not contain petroleum product residues or other contaminants, although it can, particularly with commercial or mass-produced soaps.

The Chemicals

[anything] Acetate
Acetone
Alpha-Hydroxy Acids
Ammonium Hydroxide
Benzene
Boric Acid
Bronopol
Butane
Carbon Tetrachloride
Ethanol / Ethyl Alcohol (typically made from genetically modified corn), [anything] Ether, Ethyl or Butyl
Ethylene Dichloride
Formaldehyde
Glycols as a group: Propylene, Butylene, Ethylene and Polyethylene [and anything that sounds like or contains these items]

Hexane
Isobutane
Isopropanol / Isopropyl Alcohol
Lye:
 Calcium Hydroxide
 Chlorinated Trisodium Phosphate
 Barium Hydroxide
 Hydrochloric Acid
 Potassium Hydroxide
 Sodium Acid Sulfate
 Sodium Hydroxide
 Sodium Sesquicarbonate
 Strontium Hydroxide
Methanol / Methyl Alcohol
Methylene Chloride
Perchloroethylene
Potassium Carbonate
Propane
Propanol / Rubbing Alcohol
Sodium Carbonate
Sorbitol
Sulfuric Acid
Trichloroethylene
Triethanolamine (TEA)
Wood Alcohol / Wood Spirits

Found In

Paint, paint thinner and stripper, marking pens, adhesives, varnish, automobile antifreeze, airplane deicer, industrial lubricants, windshield wiper fluid, cement, ink, gasoline.

Dry cleaning fluid, spot remover, furniture polish, metal polish, glass cleaner, toilet bowl cleaner, oven cleaner, drain opener, disinfectant, rug shampoo, upholstery cleaner, dish detergent, “all-purpose cleaner,” air freshener, laundry detergent (liquid and powder). Also used as a “carrier” in pesticides.

Shampoo, hair conditioner, hair straightener, depilatory (hair removal) product, anti-wrinkle formula, nail polish remover, facial cream, mask and astringent, permanent wave solution, body lotion, moisturizer, bath salts, eye liner, mascara, mouthwash, antiperspirant, deodorant, tooth powder, aftershave, contact lens solution.

Cigarettes, pet food, cattle feed.

Medicine tablets, cough syrup, medicinal creams, contact lens solution, douching preparations.

Butter, milk, cream, ice cream, cocoa, canned olives and peas, spices, condiments, bakery goods. Also found in aerosol cans for foods like whipped cream and cheese spread.

Effects

Breakdown of cells. Skin rashes, severe irritation, burning and numbness. Muscular weakness. Burning, tingling and numbing of nerves, fainting, dizziness, headaches, depression, impaired perception, disorientation, stupor, coma, permanent nerve damage. Fatigue. Nausea, vomiting, abdominal pain, diarrhea, loss of appetite and weight. Abnormally increased body temperature. Clouding of the eyes, vision problems, permanent eye damage such as blindness—and if lye or other acid is splashed in eyes, within minutes. Irritation and damage to mucous membrane lining, coughing, shallow breathing, difficulty swallowing, and other respiratory disturbances. Insomnia (particularly if sleeping on formaldehyde-treated sheets) or excessive sleepiness. Anemia. Kidney damage and liver damage. Leukemia and Hodgkin's disease. Cancers, especially of the sinuses and throat. Heart damage, sometimes leading to attacks. Death.

Each year in the United States alone, at least 6,000 people are poisoned by ethylene glycol (the main ingredient in antifreeze). Unless treated immediately, the person can die within 24 to 36 hours. Even if death does not occur, permanent disability can result. This chemical is sweet, which makes it tempting to children (and pets, particularly dogs).

Just one ounce of isopropyl alcohol can induce death in a young child.

AMMONIA AND AMMONIA COMPOUNDS

Overview

Ammonia is a highly toxic petrochemical made by blowing steam through specially treated coal.

The Chemicals

Ammonia

Found In

Glass cleaner, floor cleaner, detergent, disinfectant, hair dye, bathroom cleanser.

Eye liner, mascara.

Ammonia-Based Chemicals

Ammonium Hydroxide

Ammonium Chloride

Benzalkonium Chloride (BAK)

Quaternary Ammonium Compounds

Found In

Batteries, explosives, detergents, fabric softener, glass and window cleaners, bathroom and tile cleaners.

Hair dye, hair straightener, skin cream and wash, eye lotion, antiperspirant and deodorant. Medicines.

Bakery products (used as preservatives). Processing of sugar cane and beet sugar.

Effects

Hair breakage. Severe eye irritation, including stinging, watery eyes, cataracts, cornea damage, and vision problems. Headaches and difficulty in mental functioning. Burning of mucous membranes, including severe respiratory tract irritation, coughing and gagging, difficulty breathing, asthma, bronchitis, inflammation of vocal cords, and pneumonia. Chemical skin burns, including ulcerations and lesions. Pulmonary edema (accumulation of fluid in tissues and air spaces of the lungs, which can lead to respiratory failure).

WARNING: Mixing ammonia with chlorine bleach creates deadly chloramine gas fumes!

CHLORINE BLEACH / CHLORINE DERIVATIVES

Overview

Chlorine is a toxic, yellow-green gas that occurs in nature only on rare occasions. The component of most bleaches, chlorine was one of the first manufactured poison gases for warfare. It's produced by running an electrical current through salt water or melted salt, which splits apart the salt molecules and creates chlorine.

When chlorine is used to bleach paper, the reaction of the chlorine with the cellulose fibers of the tree and lignin (the tree's glue that holds the fibers together) produces poisons called organochlorines as well as dioxins (a group of about 75 different toxic chemicals).

The Chemicals

Chlorine Dioxide
Sodium Hypochlorite
Chlorinated Trisodium Phosphate (used in dishwasher)

Found In

Scouring powder, laundry, automatic dishwashing detergent, disinfectant cleaner, mildew remover, toilet bowl cleaner.

Bleaching agent for paper products such as toilet paper, tissues, paper towels, and coffee filters.

Cotton clothing.

Swimming pools and hot tubs.

Effects

Bleach: Anemia. Eye irritation. Mucous membrane corrosion. Skin rash, scarring. Lung irritation, sore throat, coughing, wheezing, runny nose. Circulatory collapse. Fainting, dizziness, mental confusion, delirium, and coma. Pulmonary edema and heart disease. Diabetes. Gastrointestinal and urinary tract cancers.

Dioxins: Additional immune system breakdown, cancer, physical deformities and developmental problems in children, reproductive disorders.

Organochlorines: Cognitive difficulties including lowered IQ; reduced fertility and other reproductive disorders; immune system problems; breast, prostate, and testicular cancer.

WARNING: Mixing chlorine bleach with ammonia creates deadly chloramine gas fumes! Mixing chlorine bleach with vinegar or toilet bowl cleaner creates other harmful gases.

DETERGENTS / EMULSIFIERS

Overview

This category pertains to function rather than one specific chemical. Detergent lifts off dirt from clothing and surfaces by creating foam. Detergent begins as soap that is then subjected to five or six extra chemical processes. It often contains toxic aluminum silicates and/or sulfites that remain in the cloth and rub off on the skin. Sometimes, fluorescent chemical dyes are added that make clothes shine more when in ultraviolet light, thus giving the illusion of cleanliness. Because detergent binds grease molecules together, it is used in all types of cosmetics, as well as tablets (medications and even supplements, which require binding agents so the ingredients stick together).

Don't be fooled if the label says "Natural, from coconut." In most cases, the detergent has been so heavily processed that it's far removed from its original natural source and is now a synthetic chemical.

The Chemicals

Ammonium Cocoyl Isethionate+
Ammonium Laureth Sulfate
Ammonium Lauryl Sulfate+
Borax, (Sodium Borate)
Cocamido/Cocamide DEA
Cocamido/Cocamide MEA
Cocamidopropyl [anything]
Cocoa/Coco [anything]
Cocoyl Sarcosinamide
DEA Cetyl Phosphate
DEA Lauryl Sulfate
DEA Linoleate
DEA Oleth-3 Phosphate
DEA Myristate
Diethanolamine (DEA)**
Diethylene Glycol Monostearate
Disodium Laureth Sulfosuccinate
Disodium Ricinoleamido MEA Sulfosuccinate
Ethanolamide of Lauric Acid
Ethylene [anything]
Ethylene Glycols (as a group)
Lauramide DEA
Laureth-23
Linoleamide MEA
Magnesium Laureth Sulfate
Modified Sulfonates
Sodium Cocoyl Isethionate*
Sodium Lauroyl Sarcosinate*
Monoethanolamine**

Myristamide DEA
 Myristyl
 Myristate
 Oleamide DEA
 Polyquaternium (1-14)
 Polysorbate [number]
 Propylene Glycol Monolaurate, Monostearate or Stearate
 PVP/VA Copolymer (from petroleum)
 Quaternary Ammonium Salts/Compound
 Sodium Laureth Sulfate
 Sodium Laurel/Lauryl Sulfate, also called:
 Akyposal [letters/numbers]
 Aquarex [anything]
 Avirol [letters/numbers]
 Berol 452
 Carsonol SLS [anything]
 Conco Sulfate [anything]
 Cycloril [number]
 Dehydag Sulfate GL Emulsion
 Detergent 65
 Dodecyl Sulfate Sodium
 Dodecyl Alcohol
 Duponal [letters]
 Emal [number]
 Emulsifier # 104
 Emempicol [letters/numbers]
 Emersal [numbers]
 Gardinol
 Hexamol or Incrolol SLS
 Hydrogen Sulfate, Sodium Salt
 Irium
 Jordanol SL-300
 Lanette Wax-5
 Maprofix [letters]
 Melanol CL [sometimes with a number]
 Monododecyl Sodium Sulfate
 Monogen Y 100
 Monopropylene Glycol
 N-Dodecyl Sulphate [or Sulfate] Sodium
 Neutrazyme
 Nikkol SLS
 Odoripon AL 95
 P & G Emulsifier 104
 Perlandrol L
 Product # [number]
 Quolac EX-UB
 Richonol [letter]
 Sodium Dodecyl Sulfate
 SDS
 SLS
 Simtapon L
 Sinnopon [letters/numbers]

Sipex [letter or number]
 Sipon [letters/numbers]
 Sodium Monododecyl Sulfate
 Sodium Dodecyl Sulphate
 Sodium N-Dodecyl Sulphate
 Solsol Needles
 Standapol [letters/numbers]
 Stepanol [letters/numbers]
 Sterling [letters]
 Sulfofon [letters/numbers]
 Swascol [letters/numbers]
 Syntapon
 Tarapon [letters/numbers]
 Texapon [letters/numbers]
 Trepamol [letters/numbers]
 TVM [letters/numbers]
 Ultra Sulfate [letters/numbers]
 WAQE
 Witcolate [anything]
 Sodium Oleth Sulfate
 Sorbitan Monopalmitate
 Sorbitan Monostearate
 Stearamide MEA
 TEA-Dodecylbenzenesulfonate
 TEA-Lauryl Sulfate
 Triethanolamine (TEA)**

**Also used as solvents and preservatives, as are many other chemicals in this group.

+According to some sources, these are safe.

*These are produced from real coconut and are milder than synthetic detergents, although some health-oriented writers advise against using them for the skin and scalp because they are drying and sometimes contain contaminants. Glycerol Monostearate / Glycerol Stearate is sometimes used as a substitute, and has low toxicity. There's not enough data on Decyl Glucoside, according to the Environmental Working Group cosmetics database.

Found In

Metal polish, engine degreaser, floor cleaner and floor wax, paint, brake and hydraulic fluid, airplane de-icer.

Liquid laundry detergent, laundry powder, dish washing liquid, spot remover, fabric softener, bathroom cleaner.

Any product that produces suds contains at least one detergent. Shampoo, bar (hand and bath) soap, bubble bath.

Facial cleanser and cream, hand and body lotion. Shaving cream, cosmetics of all kinds, toothpaste.

Hair dye. This is allowed to be on the market because of an ill-advised “grandfather clause,” which states that if recognized poisons were sold prior to 1938—when the laws regulating poisons were more lax—then they can sold now. The idea is that since the chemical has “always been around” and traditionally enjoyed freedom from regulation, there is no reason to change; so therefore the chemical continues to be sold and used without regulation. Drugs of all kinds, including pain relief medication.

Effects

Strips naturally-occurring protective oils on skin, leaving it vulnerable to contamination by harmful microbes. Skin irritation. Scalp eruptions similar to dandruff. Allergic reactions. Diarrhea. Eye irritation including early onset of cataracts and even blindness (especially from Sodium Lauryl Sulfate). Hair loss, liver and kidney damage or liver and kidney cancer (from DEA). Interference with nutrient absorption, disruption of hormones, impeded reproductive functioning (such as decreased sperm counts). Anemia.

Sodium Laurel Sulfate (SLS) is a common ingredient in many products, but this doesn’t mean that it’s completely safe. Part of the reason for the damage caused by SLS is that it accumulates in the body, especially the heart, liver, lungs, and brain. SLS disrupts proper DNA messages and impairs the healing process. SLS can be so caustic that it corrodes the hair follicle and impairs its ability to grow hair—thus causing the hair to thin. Researchers take advantage of the abrasive effects of SLS when they want to test other chemicals. They first deliberately irritate the skin with SLS in order to more quickly discover how other chemicals affect the skin.

Sodium Laurel Sulfate can also react with other chemicals to form dangerous compounds called *nitrosamines*. Nitrates and nitrates—found in bacon and prepared luncheon meats—are part of the family of nitrosamines. Nitrosamines in shampoo can result in their being absorbed at an even higher rate than if the person had eaten the chemicals in food. Some sources believe that one shampoo session with sodium laurel sulfate is equivalent to eating a pound of nitrate-filled bacon.

Triethanolamine, which is an eye and skin irritant, can react with other disclosed or undisclosed chemicals in a product to form carcinogenic nitrosamines.

DYES

Overview

Over 99% of dyes on the market today are synthetic. They’re manufactured from coal tar, which is derived from petroleum. Many dyes contain toxic metals such as aluminum, which is added to give makeup an iridescent shine; see **Heavy (Toxic) Metals**.

Before synthetic dyes were developed, our ancestors used berries, bark, and other ingredients from plants. If you aren’t sure whether or not a dye is poisonous, it probably is—unless it’s from a safe, pure vegetable source. If a product contains naturally-occurring vegetable dyes, the label will proudly state this. In the past few decades more companies have used plant-based dyes, some of which appear in natural-fiber clothing. Some good books about using plant-based dyes include *Harvesting Color: How to Find Plants and Make Natural Dyes* by Rebecca Burgess, *The Modern Natural Dyer* by Kristine-Vejar, and several excellent books written by Sasha Duerr.

The synthetic dyes listed below are a fraction of what’s being used in the marketplace. Note that “*lakes*” are mineral pigments that don’t dissolve in water.

The Chemicals

Acid Blue 9 & 74
 Acid Blue Ammonium Salt
 Acid Green 5
 Acid Red 18, 27 & 87
 Acid Violet 49
 Acid Yellow 73 Sodium Salt
 Azo color/dyes/compounds (as a group)
 D & C Blue [number]*
 D & C Brown [number]*
 D & C Green [number]*
 D & C Orange [number]*
 D & C Red [number]* ++
 D & C Violet [number]
 D & C Yellow [number]*
 Direct Black 131 & 38
 Direct Blue 6
 Direct Brown 1, 2, 31, 12 & 154
 Disperse Yellow 3
 Phenols [any variation]
 Quinazoline Yellow
 Yellow No. 11

*Some contain aluminum lake.

++ Some contain barium lake, zirconium lake and strontium lake.

Found In

Candy, pudding, canned meat, bakery products, chips, packaged cereal, carbonated beverages, pet food, condiments, soup, pasta, caviar, fresh fruits and vegetables.

Shoe polish, clothing.

Nearly all detergents and cleaners for kitchen, bathroom, laundry, dishes, furniture, glass, and the rest of the home. There is hardly anything that does not contain dye!

Shampoo, hair conditioner, bar (hand and body) soap, mouthwash, bubble bath and bath salts. Deodorant, moisturizer, facial powder, rouge, mascara, eye liner, eye shadow, hair dye, nail polish, most cosmetics. Toothpaste and mouthwash.

Medicines of all kinds, including aspirin, sleeping pills, decongestant, cough suppressants. Also vitamins and other nutritional supplements.

Effects

Allergic reactions, including hives and contact dermatitis. Eye irritation and permanent blindness. Leukemia (4% of all cases due to hair dye). Hodgkin's disease. Non-Hodgkin's lymphoma (20% of all cases due to hair dye). Multiple tumors, including in kidney and adrenal glands. Cancer of the thyroid, bladder, intestinal tract, and elsewhere. Behavioral problems and emotional volatility. Attention Deficit Disorder (ADD) or Attention Deficit Hyperactivity Disorder (ADHD), especially in children. Interference of brain-nerve transmission. Chromosome damage. Reproductive mutations.

FLUORIDE (SODIUM FLUORIDE)**Overview**

Sodium fluoride, simply known as "fluoride," is registered as a pesticide by the Federal Insecticide, Fungicide, and Rodenticide Act. Fluoride is a heavy metal or toxic metal, and has never been approved by the FDA as safe or effective for therapeutic purposes. I have created a separate category for fluoride because it's so common—and dangerous.

Fluoride is added to toothpaste and drinking water in the United States and other countries. Although industry touts the chemical as beneficial and even medically necessary, studies on the safety of fluoride were ordered and then suppressed by the US government when the studies revealed that fluoride is a deadly poison.

Found In

Toothpaste, all kinds, even many brands obtained at a health food store. More than 11,000 calls are made annually to Poison Control Centers in the United States about children who swallow toothpaste and become ill. In fact, labels on toothpaste cartons read, "Do not swallow."

Baby foods.

Drinking water.

Effects

Sodium fluoride causes health problems similar to those caused by other heavy metals; see **Heavy (Toxic) Metals**. Rather than being a great cavity fighter, fluoride erodes the enamel on teeth, creating stains and pitting. However, this poison causes even more damage, including skin rashes, convulsions, blood vessel calcification, gastrointestinal disorders, arthritis, aching bones, bloody vomit, immune malfunction, genetic and birth defects, cell death, infertility, and increases in deaths from liver, bone, and other cancers.

Fluoride damages the brain and nervous system, lowering intelligence and numbing the centers of the brain dealing with the ability to think and to exercise free will (discussed in Chapter 3).

For comprehensive and detailed information, including political action strategies, see the website of the Fluoride Action Network (FAN), www.fluoridealert.org.

FRAGRANCES AND FLAVORS (SYNTHETIC)

Overview

This is a very broad category. The terms “fragrances” and “flavors” are often used together and interchangeably because they’re chemically related and frequently come from the same source. Because their ingredients are permitted by the FDA to be defined as trade secrets, companies aren’t legally required to list them or divulge the formulas. Fragrances and flavorings are not required to be labeled “artificial” and legally they can be called “natural.” You are probably safer if the label is specific (as in “contains real orange oil extract”), rather than general (as in “natural flavors”). However, in some products that are genuinely natural—as we would commonly define the term—the FDA *requires* the label to include the phrase “natural flavors.” Therefore, unless the customer speaks to an honest and knowledgeable representative at a company, it can be difficult to know exactly what’s in a product.

At least half of the additives to foods are synthetic flavorings. Even if a label reads “contains natural flavors,” the flavors are legally allowed to be adulterated or comprised entirely of synthetic chemicals.

Fragrances and flavors are used in any and all items. Synthetic fragrances can contain up to 5,000 hydrocarbons (derived from petroleum or natural gas) and as many as 200 other ingredients, which instead of being listed separately can simply say “fragrance.” After processing, their main component is poisonous alcohol solvent (which can also be burned as fuel).

In *Beauty To Die For*, Judi Vance cites studies showing that 71% of patients who inhaled a popular perfume had markedly diminished blood flow to the brain. Although the effect was temporary, consider what happens to someone who constantly reapplies perfume with the intent of making the odor linger.

Ethyl acetate is only one example of thousands of flavors/fragrances. In *A Consumer’s Dictionary of Food Additives*, 4th Ed., Ruth Winter reports that even though ethyl acetate occurs naturally in apples, bananas, grape juice, pineapple, raspberries and strawberries, the final synthesized product is so highly processed and concentrated that it irritates and eventually depresses the central nervous system. Ethyl acetate can also cause kidney and liver damage due to prolonged inhalation. Because the chemical acts as a solvent on fats, it causes the skin to dry and crack, which can promote secondary infections.

What follows is just a tiny sample of synthetic fragrances and flavors, as there are far too many to list them all.

The Chemicals

Acetanisole
 Acetophenone / Acetyl Benzene / Benzoyl Methide
 Acetyl Acetone / Acetoacetone / Diacetyl Methane
 Acetyl Hexamethyl Tetralin
 Allyl: Anthranilate, a-Ionone, Butyrate, Caproate, Heptanoate, Hexanoate, Isothiocynate, Mercaptan, Phenylacetate, Phenoxyacetate, Propionate, Sorbate, Sulfide, Tiglate, 10-Undecenoate**
 Allyl Cyclohexane: Acetate, Butyrate, Propionate
 Amyl: Acetate, Butyrate, Formate, Hexanoate, Octanoate, Propionate, 2-Furoate [also look for these words with numbers]**
 a-Amylcinnamaldehyde [anything]
 a-Amylcinnamyl: Acetate, Alcohol, Formate, Isovalerate
 Anisole
 Anisyl Acetate, and Anisyl Alcohol, Butyrate or Formate
 Anthranilic Acid / Methyl Ester / Cinnamyl Ester
 Aspartame (see Chapter 1)
 Benzaldehyde and Benzaldehyde: Dimethyl, Acetal, Propylene Glycol Acetal, Glyceryl Acetal
 Benzyl Butyrate
 Butyl Stearate and Butyl Ether
 Diethyl: Aspartate, Acetaldehyde, Malonate, Sebacate, Succinate, Tartrate
 Dihydro Carveol
 Dihydro Coumarin
 Ethyl: Acetate, Acetoacetate, Acetone, Acrylate, Anthranilate, Benzoate, Caproate, Decanoate, Glutamate, Hexanoate, Lactate, Maltol, Methylphenylglycidate, Myristate, Nitrite, Oleate
 Methyl propyl ketone (MPK) / 2-Pentanone
 Monosodium Glutamate (in Hydrolyzed Soy, Vegetable/Yeast Proteins/Extract, Sodium Caseinate; see Chapter 3)
 Nonalol
 Nonanal/Pelargonic Aldehyde
 Formate
 Phenyl [with a number]
 Phenylacetaldehyde [anything]
 Phenylpropyl [with a number and usually another word]
 Piperonal (Heliotropin)
 Piperonyl Acetate, Aldehyde, Butoxide, Isobutyrate
 Pyruvaldehyde/Acetyl Formaldehyde/Acetyl Formic Acid
 Saccharin++

** “Allyl” means “derived from allyl alcohol.” Not everything with “allyl” is poisonous. The herb tarragon contains a naturally-occurring compound p-allyl anisole.

++Saccharin, used to sweeten toothpaste and foods, is a recognized carcinogen.

Found In

Dishwashing detergent, fabric softener, oven cleaner, window and glass cleaner, antifreeze, air freshener, furniture polish, shoe polish.

Nail polish and nail polish remover.

Shampoo, hair conditioner, hand and body soap, moisturizer, hand lotion, skin cream, antibacterial lotion, toothpaste, perfume and cologne, aftershave lotion, shaving cream, foundation and body powder, bubble bath and bath salts, deodorant, antiperspirant, lipstick.

Disposable wipes, sanitary napkins, antiperspirant, deodorant, talcum powder, feminine hygiene spray, tissues, toilet paper, tampons, disposable towels for babies.

Medicines of all kinds, including cough suppressant.

Ice cream and other dairy products, ices, candy, baked goods, icing, beverages (tea, coffee, soda), spices, syrups, chewing gum, pudding and gelatin desserts, liquor, condiments, meats, shortening.

Ethyl acetate and amyl acetate are used as a nail polish solvent and a flavoring for candy, baked goods, liquor, ice cream, chewing gum, condiments, gelatins and puddings. The term “ethyl” signifies a hydrocarbon that is derived from natural gas.

Effects

Skin rashes, blisters, changes in coloration of the skin. Digestive disturbances, including vomiting and diarrhea. Muscular aches and pains, including shoulder and chest pain; numbness. Violent coughing. Irritation of mucous membranes. Allergies, including sneezing. Sluggishness, fatigue. Headaches, mood swings and irritability, dizziness and vertigo, confusion, central nervous system and emotional depression, hyperactivity, convulsions. Coma. Narcotic. Kidney and liver damage. Reproductive, birth, fertility and fetal disorders.

HEAVY (TOXIC) METALS

Overview

Heavy metals don't belong in the body. Even if a toxic metal is an unbound mineral with a name like potassium or calcium, it's very different from a mineral *compound* such as (for instance) potassium aspartate or calcium lactate that's bioavailable to the body. In a mineral-deficient individual, the body—unable to distinguish between nutrient minerals and toxic metals/minerals—will absorb the toxic and not the bioavailable substances.

Many pigments are prepared with various forms of aluminum, barium, strontium, and other heavy metals that fix the colors and prevent them from being dissolved in water. (Also see **Dyes**.) A metals that's toxic in any form, such as aluminum, can appear by itself or as part of a compound (such as aluminum chlorohydrate).

The Chemicals

Aluminum [anything]
 Antimony [anything]
 Arsenic [anything]
 Barium [anything]
 Cadmium [anything]
 Calcium: Carbonate, Chloride, Cyanamide
 Chlorides as a group (except for Sodium Chloride)
 Chromium: Nitrate, Oxychloride, [number] Oxide
 Cobalt
 Copper/Cupric Cyanide
 Iron Oxide
 Lead [anything]
 Mercury [anything]
 Nickel [anything]
 [anything] Oxide
 Potassium: Chromate, Hydroxide, Salt of Iodeosin (See **Preservatives** for details on Potassium Sorbate)
 Silver Chloride***
 Silver Nitrate***
 Silver Oxide***
 Strontium [anything]
 Titanium Oxide/Dioxide
 Vanadium
 Zinc Oxide
 Zinc Potassium Chromate
 Zinc Stearate
 Zirconium

****Colloidal* Silver is an entirely different substance that's safe and beneficial; see Chapter 3.

Found In

House and artist's oil paint, photography chemicals, solder, pottery glaze on ceramic dishware.

Shoe polish, stain resistant chemical in carpet and furniture.

Drain opener.

Laundry detergent, dishwashing liquid.

Hair dye. Hair coloring products are allowed to be marketed without being regulated due to a "Grandfather Clause" of 1938. This law exempted from federal regulation hair dyes and other chemicals that were already on the market, based on the rationale that since they were previously and currently being used, this somehow gave them immunity from restriction even though tests showed that they were actually toxic.

Antiperspirant, deodorant, moisturizer, body lotion, skin cream, antibacterial skin lotion, toothpaste, bar (hand and body) soap, sun block and sunscreen.

Mouthwash and toothpaste, including whitening toothpaste.

Mascara, eye shadow, eye liner, rouge and other face powder, lipstick, nail polish, theatrical and clown makeup.

Pain medicine.

Effects

Stomach and abdominal cramps, nausea, constipation, vomiting. Excessive thirst. Skin rash. Weakness and lethargy. Muscle, joint and bone pain. Mouth sores. Cancer. Tooth discoloration. Depression. Premature aging. Brain disorders such as Alzheimer's (from aluminum buildup in the system), learning disorders, lowered intelligence, short attention span, hyperactivity, motor difficulties. Poor impulse control leading to violence and murderous outbursts, probably caused by abnormally lowered levels of the brain neurotransmitter serotonin. Stillbirths and low sperm counts. Immune disorders. Genetic damage.

PESTICIDES AND FUNGICIDES

Overview

This is a broad category, based on function. Fungicides kill various forms of fungi, which also include mold, mildew, and rot. Most common household soaps and detergents—kitchen, laundry and bath disinfectants and sanitizers, and products that kill mold and mildew—are legally classified as pesticides because they contain ingredients that either deter, harm, or outright kill pests. Legally, "pests" can range from microscopic pathogens (including fungi) to insects to rodents. The label will read "germicidal," "anti-fungal" or "anti-bacterial" rather than "contains pesticides." Not every pesticide present in an insecticide is listed on the label, and some effects that are harmful occur when the different chemicals are combined. Although many pesticides are derived from petroleum, they are not listed again under **Petrochemicals/ Plastics** unless they're commonly recognized as petroleum-derived and are specifically used as plastics.

Below is only a minuscule sample of the thousands of pesticides on the market. Poisons that have been banned in the United States but are still present in the environment are known as Persistent Organic Pollutants (POPs), and have asterisks after them. (The "Organic" in "Persistent Organic Pollutants" should not be confused with some common synonyms of the word like "healthy" or "natural." Here, "organic" is used as a definition in classic chemistry: "containing carbon" and sometimes also "containing hydrogen.")

Although almost 100% of household detergents contain pesticides, only a very small number of products indicate specifically that they are anti-bacterial or fungicidal. In any case, the labels would never list "pesticides" as one of the ingredients. Most of the pesticides listed below are synthesized chemicals.

Curiously, a few substances listed as pesticides are actually safe, so they are not included below. Also not included are biocompatible substances such as essential oils that have naturally-occurring pesticidal, germicidal and fungicidal properties (and are legally not regarded as pesticides or fungicides).

The Chemicals

Acephate, Acetaldehyde, Akton, Aldrin,* Aldicarb, Allethrin, Azinphosmethyl, Benomyl, Benzaflo, BHC, Binapacryl, Binapacryl, Botran, Bufencarb, Captan, Carbaryl, Car bendaxim, Carbofuran, Carbophenothion, Caumaphos, Caustic Soda, Chlordane,* Chlordimeform, Chlorinated Trisodium Phosphate, Chlorine, Chloropicrin,

Chlorothalonil, Chlorpyrifos, Coal Tars, Crufomate, Cyfluthrin, Daminozide, DDT,* DDVP, Deet, Demeton, Diazinon, Dichlorobenzene, Dichloroethyl Ether, Dichlorvos, Dicloran, Dicofol, Dicrotophos, Dieldrin,* Dimethoate, Dinitrocresol, Dinobuton, Diquat, Disulfoton, Dimethoate, Dinitrocresol, Dioxathion, Dioxins,* Diphenyl, D-limonene, DNOC, Endosulfan, Endrin,* EPN, Ethion, Ethylene Bisdithiocarbamates (EBDCs), Fensulfothion, Fenthion, Fenvalerate, Folpet, Fonophos, Fluoride (also known as Sodium Fluoride), Furans,* Heptachlor,* Hexachlorobenzene (HCB),* Hydrocarbons, Hydroquinoline Bromide, Imazilil, Iprodione, Lead Arsenate, Lindane, Linuron, Malathion, Maneb, Metam Sodium, Methamidophos, Methidathion, Methomyl, Methyl Parathion, Metolachlor, Metronidazole, Mevinphos, Mexacarbate, Mexacarbate, Mirex,* Monocrotophos, Naled, Naphthalene, Naphthaleneacetic Acid, Nicotine, Nitrobenzenamine, Norflurazon, Orthophenylamine, Orthophenylphenate, Orthophenylphenol, Oxydemeton Methyl, Oxyfluorfen, Oxythioquinox, Parathion, Paraquat, Pentachlorophenol, Permethrin, Perthane, Phenothrin, Phorate, Phosalone, Phosmet, Phosphamidon, Piperomylbutoxide, Prometryn, Propargite, Propoxur, Quinomethionate, Resmethrin, Ronnel, Rotenone, Schradan, Sodium Fluoride (also known simply as “Fluoride”), Sodium Orthophenylphenate, TDE, Temephos, TEPP, Tetrachlorvinphos, Tetradifon, Tetramethrin, Thiabendazole, Toxaphene,* Trichlorfon, Triclosan, Trifluralin, Trimethacarb, Ziram

*Otherwise known as Persistent Organic Pollutants (POPs). Although banned in the United States because they are so poisonous, Persistent Organic Pollutants are still used elsewhere. They lodge in the fatty tissue of animals, and humans who are unable to excrete them, and the chemicals continue to wreak severe damage on the environment, humans and animals

Found In

Obvious products: Moth balls, weed killer, insect repellent, insecticide, flea and cockroach spray, rat poison, and antifungal, anti-algae swimming pool chemicals, pet flea and tick spray, flea collars, dust, and bath solution.

Items listed as germicidal, anti-bacterial, anti-fungal, disinfectant, or killing mold and mildew, including: Most bathroom, kitchen, laundry and personal care soap such as hand and body bar soap, antibacterial soap, liquid and powder laundry detergent, and dishwashing liquid. Disinfectants/sanitizers such as toilet bowl cleaner.

Deodorant, body wash, hand and body lotion, antifungal medicine cream and foot powder, facial mask.

Toothpaste and mouthwash. For more information on fluoride, see **Fluoride (Sodium Fluoride)** and **Heavy (Toxic) Metals**. Note that Triclosan is now being used in toothpaste—even though the FDA has acknowledged that no evidence exists that it is effective when ingested orally, and evidence exists that pathogens are becoming immune to the chemical.

In the late 1990s, industry started impregnating antibacterial agents into plastic cutting boards and cooking utensils. Not only is this dangerous, it is unnecessary, as subsequent studies (to the surprise of researchers) showed that pathogenic microbes have a hard time remaining alive on ordinary wood cutting boards, which many people have stopped using in favor of plastic.

Conventionally grown produce is heavily sprayed.

Among the most toxic are: Strawberries (probably the most sprayed, and with the worst pesticides), green and red bell peppers, peaches, celery, apples, apricots, cherries, grapes, lettuce, green beans, cucumbers, watermelon, cantaloupe, grapefruit spinach, pears, and oranges. Produce is even sprayed after being picked. Bananas and tomatoes are picked unripe, and then artificially “ripened” with polyethylene gas just before they reach the stores.

The Environmental Protection Agency has authorized an “allowable” amount of pesticides to be present in foods, which include (but are not limited to): meats, fruits and vegetables, baked goods, liquor, candy, and beverages. The pesticide so-called “residues” are not only present because of what is sprayed on crops; many ingredients classified as pesticides are also used in the processing of food.

Conventionally raised animals raised for human consumption eat conventionally grown produce and grains. Therefore, pesticides are prevalent in animal feed.

Unidentified in: Carpets, finished wood products, clothing (non-organic cotton is heavily sprayed—which makes it wise to also avoid eating anything cooked with cottonseed oil).

Effects

Flu-like symptoms such as weakness, muscle and joint pain, and fatigue. Nausea, vomiting, stomach burns, and other digestive disturbances. Nervous system ailments: mood swings, emotional and mental disorientation, slurred speech, insomnia, motor spasticity, memory loss, dizziness, tingling, convulsions, numbness, tremors, paralysis, grand mal seizures. Swelling of face, eyelids,

lips, mouth, and throat. Skin rashes and burns. Liver and kidney damage. Chest pains, shortness of breath. Excessive salivation. Urinary tract damage. Birth defects (including stillbirths), and genetic mutations. Cardiac irregularities. Liver, lung, and thyroid gland tumors; bladder and other cancers. The kind of damage, and time for onset of symptoms, are unknown for most pesticides, because they are either inadequately tested, or in most cases not tested at all.

The effects of single chemicals increase when they are mixed with other chemicals, and also because they degenerate into other toxins once they are ingested. Only one example among thousands is the fungicide Captan, whose breakdown products include a chemical similar to the drug thalidomide, widely known to cause birth defects.

Another difficulty with pesticides is that even if they are banned in the United States, they are allowed to be sold to other countries—which then apply the pesticides to produce that they export to United States. In this way, we ingest the very pesticides that our laws have declared are too dangerous to use at home. Our labeling laws do not cover pesticides that enter this country on produce from other countries.

Despite the disparity in pesticide laws between the United States and other countries, Most produce grown in the United States contains more pesticides than produce grown elsewhere such as Chile, New Zealand, Mexico, Canada, Australia, Mexico, Argentina and Germany.

Of all the agricultural corporations, Monsanto is the most responsible for the increase of pesticides worldwide.

PETROCHEMICALS / PLASTICS

Overview

This large class of chemicals is derived entirely or partially from petroleum.

Petrochemicals form a barrier against moisture. They can also prevent a concoction of diverse ingredients from separating, which makes them popular for use in cosmetics when it's desirable to maintain a smooth blend. However, petrochemicals coat whatever they touch. If that surface is skin, hair, mucous membranes or any other tissue, the cells are literally smothered by a layer of plastic and not only can't absorb moisturize, but they also cannot breathe, eliminate waste materials, or generate new healthy cells.

Note that some types of plastic—especially ABS (acrylonitrile butadiene styrene)—are more stable than others and have been approved by the FDA for use in items related to food, children's toys and medical equipment.

Also see **Preservatives** (some are made of petroleum).

The Chemicals

- Aldehydes
- Acrylic
- Acrylonitrile
- Acetate
- Acetyl Acetone
- Acetylene
- Acetic Acid (from petroleum, not vinegar)
- Acetic Ether
- Acrylic polymers
- Alcohols (as a group)
- Ammonia (also see **Ammonia**)
- Benzene
- Butadiene
- Butane
- Butanol
- Butylene, [anything] Butyl
- Coal Tar (also see **Dyes**)
- Dipropylene Glycol
- Ethylene & Ethylene glycol
- Formaldehyde
- Glycols (as a group)
- Kerosene
- Methacrylate
- Microcrystalline wax
- Mineral Oil
- Naphtha/Naphthalene
- Paraffin
- PEG [number]
- Petroleum Hydrocarbon Resin

Petrolatum
 Petroleum Jelly
 Phenol
 Polyacrylamide
 Polyether glycol*
 Polyethylene
 Polyethylene glycol*
 Polyglycol*
 Polyols (as a group)
 Polyoxyethylene [number and other word]*, such as
 Polyoxyethylene 40 Monostearate
 20 Sorbitan Monostearate
 20 Sorbitan Monooleate
 20 Sorbitan Monopalmitate
 20 Sorbitan Tristearate
 Polypropylene
 Polyurethane (foam) Polyvinyl Chloride (PVP)+++
 Polyvinylpyrrolidone (PVP), also called PVP Copolymer
 and PVA Copolymer
 Propylene
 Propylene Glycol, also called
 1,2-Propandiol
 1,2-Dihydroxypropane
 Methyl Glycol
 Methylethylene Glycol
 PG 12
 Propane-1,2-Diol
 Sirlene
 Trimethyl Glycol
 Polyamide (Nylon)
 Polyester
 Polystyrene (Styrofoam)
 Styrene
 Synthetic Rubber
 Tetrafluoroethylene, also called Teflon
 Toluene [anything]
 Vinyl: Acetate, Bromide, Chloride
 Vinylidene Chloride
 Xylene
 Xylenol, also called 2-4-Dimethylphenol
 ...any word that contains Ethyl, Methyl, Propyl, PVP,
 Butyl, Octyl, -ene, -eth

*also known as PEG [with a number after it, 4–200]

+++ May leach out Carbon Tetrachloride, Cyclohexanone (CH), Di-(2-ethylhexyl) Phthalate (DEHP), Dibutyl Phthalate, Dimethyl-Formamide (DMF), Methyl Ethyl Ketone (MEK), Tetrachloroethene, Tetrahydrofuran (THF), and Trichloroethane, which could be dangerous if your water pipes are made of that plastic. These materials cause DNA damage and some of them are carcinogenic.

Found In

Explosives, adhesives, wood finishes, rubber cement, antifreeze, airplane deicer, lubricant, dyes, paints, dry cleaning fluid, solvents, ink, road tar, and pitch.

Paper, cardboard, carpet, synthetic fabric, and bed sheets (treated with formaldehyde).

Pesticides.

Floor cleaner and polish, furniture polish, mothballs, air freshener.

Drinking glasses (including Styrofoam cups), swizzle sticks, food containers and wrappers, squeeze bottles, pet and cattle food.

Cushions, mattresses, pillows.

Disposable diapers, disposable paper towels for babies, sanitary napkins, tampons.

Teflon is used as a nonstick coating for cookware, irons and ironing board covers, plumbing pipes and tools.

Petrolatum (a mixture of numerous hydrocarbons that are themselves produced when gasoline is manufactured) forms the base of most skin creams, salves and ointments: petroleum jelly, moisturizer, hand and body lotion, skin cream, foundation, makeup, lip balm, eye liner, eyelash cream, eyebrow pencil, mascara, lipstick, nail polish, nail polish remover, permanent wave lotion, hair spray, hair dye, hair bleach, hair tonic, antiperspirant, deodorant, perfume, shaving cream, makeup, and hair brushes.

Contact lenses, dentures, food preparation equipment.

Toothpaste.

Medicines of all kinds, including pain relief tablets and cough suppressant. The petroleum byproducts are used to bind the tablets together.

Cigarettes.

Laundry detergent and most other cleaning agents.

Chewing gum base; ice cream and other dairy products; beverages; baked goods; cake mixes, icing and fillings; frozen custard; whipped vegetable oil toppings; shortening; meat, poultry and fish products; condiments such as catsup and relish.

Plastics are routinely used to coat fruits and vegetables. However, beeswax and caruba wax (from a tree) are sometimes used instead of plastics to coat fruits and vegetables that are organic.

Sexual lubricants, including the kind on pre-lubricated condoms.

Most vitamin and mineral supplements are made from petroleum or coal tar.

Many petroleum products are used as solvents and (because of their sweetish taste) fragrances and flavorings.

Phenols, which are commonly used in dyes, flavorings and preservatives, are very poisonous.

Plastics are used in everything, from electrical equipment to clothing to babies' toys. Don't allow young children to be exposed to unstable plastics that outgas (whose molecules evaporate into the air and are inhaled). The most dangerous plastics are vinyls, such as vinyl chloride and polyvinyl chloride (PVC). Use natural materials such as cotton, wool, silk, linen, wood and metal.

Effects

As petrochemicals block moisture and thus suffocate living tissue, common responses in the skin are pimples, blackheads, dry skin, rashes, wrinkles (in other words, premature aging), and photosensitivity (excessive sensitivity to the sun). However, petrochemicals can also be eaten in food or inhaled in nail polish. Petrochemical poisoning includes: Allergic reactions. Nosebleeds. Peeling and splitting of the nails. Headaches, central nervous system depression, paralysis, and convulsions. Circulatory collapse and disorders, including cardiac arrest. Fatigue. Intestinal gas, nausea, vomiting, diarrhea, impacted feces, gastrointestinal tumors. Difficulty breathing, asthma, bronchitis and respiratory failure, including pneumonia and asphyxiation. Malnutrition. Immune system disorders. Eye damage. Anemia (in infants exposed to clothing and blankets that were stored in mothballs). Liver and kidney damage. Acidosis (unnatural acidification of the system). Coma.

Mineral oil (petrolatum) is a common ingredient of cosmetics and sometimes even foods. It may accumulate in the lymph nodes, where it dissolves and prevents the absorption of Vitamin A from the intestines.

Some petrochemicals such as polyoxyethylene may not in themselves produce tumors, but they do speed the growth of tumors from other sources that are carcinogenic. Petrochemicals can also function as narcotics, producing symptoms similar to the drunken effects of alcohol.

Hair sprays are a fire hazard. There are accounts of women dying when their hair caught fire. The FDA once reported that a woman lit a cigarette before her sprayed hair had thoroughly dried, which caused her death from flaming hair.

PRESERVATIVES (SYNTHETIC)

Overview

When foods and other perishable ingredients are exposed to oxygen, pathogens can grow and eventually they spoil the product. Hence, we use preservatives, which work by preventing oxygen from combining with other substances. Something that prevents oxygen from combining with another substance is also known as an antioxidant.

Technically, "preservative" refers to a function. It doesn't explain the chemical composition of whatever ingredient is being used to preserve. There are three classes of preservatives: safe, naturally-occurring substances, which include essential oils of rosemary and oregano (or the herbs themselves); dangerous synthetic substances, which include petrochemicals, alcohols and pesticides (all of which are used as preservatives); and a gray area of synthesized or manufactured chemicals that are relatively safe and have therapeutic applications when used properly. As the category of preservatives is so broad, it's necessary to distinguish between those substances that are unsafe and relatively safe. (I will not be addressing naturally occurring, safe substances that have antioxidant properties.)

Some preservatives, in particular petroleum-derived substances, are sometimes used as flavoring.

The Chemicals

2-bromo-2-nitropropane-1,3-diol (this is one chemical), also known as Bronopol

Aluminum (used in vaccines; see **Heavy (Toxic)**

Metals in this appendix, and Chapter 1, **Vaccines**) [anything] Benzoate. (Despite claims that this is derived from Benzoin Gum, it's synthetically produced—so even though it's milder than most, it can still cause allergic reactions)

Benzoic Acid (synthetic, derived from petroleum—not the safe kind extracted from plant-based gum, benzoin, benzoin bark or balsam)

BHA (Butylated Hydroxyanisole)

BHT (Butylated Hydroxytoluene)

BNPD, also called 2-bromo-2-Nitropropane-1,3-diol]*

Citric Acid (antioxidant)***

Cloflucarban

Diazolidinyl Urea and Imidazolidinyl Urea*

DMDM Hydantoin*

EDTA (a synthetic amino Acid)+++

Formaldehyde and its group, [anything] Aldehyde

Glyceryl [anything]

Methylisothiazolinone Padimate-O, also called Octyl Dimethyl PABA
 Parabens as a group: Butyl, Ethyl, Methyl, Heptyl, Propyl (also called PHBS)+
 Pentachlorophenol, also called Chlorophen and Santophen
 Phenol Carbolic Acid
 Phenoxyetol
 Phenoxyethanol
 Phenyl Mercuric Acetate
 Potassium Sorbate, also called Potassium Salt and 2,4 Hexadienoic Acid—this is a mold inhibitor, and fairly safe++
 Propyl Gallate
 Poly Quaternium [number]*
 Sodium Bisulphite
 Sodium Hexametaphosphate
 Sodium & Potassium Nitrate
 Sodium & Potassium Nitrite
 Thimerosal (mercury derivative, a neurotoxin, widely used in vaccines and one of the most poisonous substances on the planet; see Chapter 1, **Vaccines** for details)

***When eaten in citrus fruits, this naturally occurring acid is safe. However, citric acid used in the food industry is manufactured by cultivating the fungus *Aspergillus niger* and allowing it to metabolize sucrose or glucose. The sugars typically come from genetically modified (GMO) corn or genetically modified (GMO) beets.

+++EDTA, a synthetic amino acid (protein building block), is successfully used by holistic practitioners to remove heavy metals from the body. Its antifungal properties also make it useful for therapeutic purposes (as in nose drops or a sinus rinse).

*Many in this group, including quaternium 15, either release or degrade into deadly formaldehyde. Formaldehyde is typically used to embalm corpses.

++One of the safest preservatives that currently exist. It is necessary for some products, such as bottled Aloe Vera juice or gel, which require something to prevent mold from forming.

+Various sources debate the safety of propylparabens. They're probably among the safest preservatives, although some people do have allergic reactions to them. It's probably preferable to find (or make) products that contain naturally-occurring Vitamins C or E, hydrogen peroxide, grapefruit seed extract, essential oil of rosemary (or something similar), or colloidal silver as preservatives.

Found In

Fumigants, insect repellent, and other pest control products.

Spot remover, furniture polish, lacquer, varnish, glass cleaner, toilet bowl cleaner, oven cleaner, drain opener, disinfectant, rug shampoo, upholstery cleaner, dishwashing liquid, air freshener, "all-purpose cleaner," laundry detergent.

Paint, paint thinner, paint stripper.

Hand and body bar soap, shaving cream, shampoo, hair conditioner, nail polish remover, facial mask and astringent, cold cream, skin lotion, sunscreen, tanning solution, permanent wave solution, aftershave lotion, bubble bath, foot powder, moisturizer, deodorant, antiperspirant.

Mouthwash.

Eyeliner, mascara, lipstick, cuticle softener, perfume and cologne, contact lens solution.

Medicines of all kinds, including cough syrup, pain relief tablets, antacids, decongestants, and respiratory inhalants.

Baked, canned and packaged goods, sweets, fish, meats, condiments, dairy preparations, soda. Very few supermarket foods do not contain preservatives.

Benzoic acid alone is used as a flavoring that mimics nut, tobacco, chocolate, orange, lemon, cherry and other fruit for beverages, ice cream, ices, candy, baked goods, icing, and chewing gum. It's also used in pickles and margarine.

Effects

Headaches. Skin rashes, inflammation, ulcers, and burns. Eye irritation and damage. Irritation of lungs and mucous membranes, asthma. Flu-like symptoms such as sore throat, coughing, and sneezing. Tumors and various types of cancer (especially from the proven carcinogens formaldehyde, sodium nitrate, potassium nitrate, sodium nitrite, and potassium nitrite). Allergies. Digestive disturbances. Blurry vision, inability to concentrate. Moodiness, mental confusion, emotional outbursts, hyperactivity. Blood in urine. Kidney damage. Muscle weakness, muscle cramps, joint pains, lack of motor coordination. Chromosome aberrations and reproductive disorders. Birth defects.

Safe Substitutes for Common Toxic Chemicals

Not all chemicals are bad. Without chemicals such as hydrogen and oxygen, for example, there would be no way to make water, a vital ingredient in beer.

—DAVE BARRY (BORN 1947)

PULITZER PRIZE-WINNING AMERICAN AUTHOR AND HUMORIST

BETTER LIVING THROUGH CHEMISTRY?

“Better living through chemistry” is a long-lived variation of an advertising slogan that DuPont, the chemicals manufacturer, promoted from the 1930s to the 1980s. It persuaded consumers to discard safe, effective natural ingredients and replace them with synthetic garbage.

Each week, thousands of new chemicals are manufactured that—incredible as it sounds—aren’t tested for safety. In our everyday lives, we are constantly exposed to pesticides, fertilizers, and volatile organic compounds (VOCs, among which are formaldehyde, toluene, benzene, and styrene). VOCs are found in antifreeze, carpet, disinfectant, laundry detergent, polishes and varnish, shampoo, and even packaged foods. Toxic heavy metals (such as cadmium, lead, mercury and unbound, non-nutritional zinc) are in cleaners, cosmetics, paints and solvents. Detergents, heavy metals and solvents are in cleaners, soaps and personal care products. Acetone, benzene, ethylbenzene, formaldehyde, phthalate, styrene, toluene, xylene and heavy metals are in carpets. Most clothing, unless specified otherwise, is treated with fire retardant and fabric softener. Deodorizers and mothballs are made from dangerous petrochemicals. Fertilizers also contain petrochemicals. Pesticides, insecticides, fumigants, and fungicides are registered poisons with the

United States government. They are sprayed onto our crops and are embedded in cooking utensils and children’s toys. (For an extensive list, see Appendix F, “Dangerous Chemicals, Contaminants and Toxins.”)

People in industrialized countries, including North America, have been brainwashed to not only accept, but *demand*, the presence of dangerous chemicals in their daily lives. Harmful chemicals are around us everywhere we look and in some places that we cannot imagine: in the home and workplace, in schools and hospitals, in restaurants and gyms, in recreation areas and landfills. Sadly, these chemical contaminants pollute the environment while impairing the health—and in many cases, causing the death—of humans, animals, and plants.

Most of us cannot control or eliminate all of the dangerous chemicals used by industry. However, we *can* control what’s in our homes. We are told that every item in our home requires a different cleaning product. But cleaners contain the same basic ingredients: a solvent (to cut grease), and color and fragrance to presumably make the product more appealing. It’s time to stop making chemical manufacturers rich while we kill ourselves. Let’s simplify our lives by throwing out toxic cleaners and pest control substances that are taking up space. Instead of poisons, we can use the safe, effective, simple ingredients listed on the following pages.

Safe Substitutes for Everyday Toxic Chemicals

Cleaning (objects, humans & animals) / Personal Care / Deodorizing / Disinfecting / Pest Control

- ◆ **Dr. Bronner's Soaps.** Simple castile soaps (liquid and bar) are made from a few, very simple ingredients, with fatty acids added for extra moisture. The powerful, fragrant essential oils in some of the soaps are safe, smell good, and fight pathogens. The company, committed to holistic living, donates money and soap to many organizations, including the Organic Consumer's Association that's working to prevent Monsanto from spreading GMOs across the globe. One of the best commercial soaps, it's usually sold as a concentrate.
- ◆ **Bar Keeper's Friend®** (since 1882), *original powder only; the liquid has additives.* This powder's abrasive quality is from concentrated oxalic acid, occurring naturally in small amounts in tomatoes and spinach. (The gritty mouth feel from cooked spinach is from oxalic acid.) Rinse well; it leaves a slight residue.
- ◆ **Baking Soda / Sodium Bicarbonate / Bicarbonate of Soda.** Baking soda is short for the chemical compound *sodium hydrogen carbonate* (NaHCO_3), whose mineral form is *nahcolite*, which is part of the natural mineral *natron*. It's often found dissolved in mineral springs. Produced for commercial and everyday use, baking soda is in the form of a very fine, white alkaline powder. It's completely safe, both for cleaning and for internal use. (In the 1924 booklet, *Arm & Hammer Baking Soda Medical Uses*, Dr. Volney S. Cheney discussed using baking soda in his clinical practice to alkalize the system. His clients who ingested it internally either did not contract the flu or had only very mild cases.)
Baking soda is essential for many purposes. It's used in cooking as a leavening and crisping agent; to extinguish fires; to neutralize burns (it's a buffer of both acids and alkalis); and for medical purposes—ranging from alkalizing the system to removing splinters from the skin to alleviating the itching from poison oak and ivy, and insect bites. Baking soda removes odors from just about anything. It makes great toothpaste and deodorant. And it's a multi-purpose cleaner in every sense of the word.
- ◆ **Borax / Sodium Borate / Boric Acid.** Also given the longer chemical names, "sodium tetraborate decahydrate" or "disodium tetraborate." Borax refers to a group of related compounds of varied water content, all related to the essential dietary mineral boron. The naturally mined or collected mineral is borax. Processed purified borax is boric acid. They're interchangeable, functioning as insect killer, fungicide, herbicide, dessicant (removing moisture), clothing whitener, household cleaner, water softener, and preservative. Borax is sold as a laundry cleaner, but has dozens of uses and is well worth your time to do further research on all its uses.
- ◆ **Citrasolv®, concentrated cleaner & degreaser only.** Contains fewer additives than the company's other products, but is labeled combustible and eye/skin irritant. Orange essential oil is superb for stains.
- ◆ **Coffee (Liquid) and Coffee Grounds.** Save the leftover liquid and grounds from your coffee for pest control and cutting grease on hands and dishes. (For drinking, use organic.)
- ◆ **Colloidal Silver.** This kills one-celled, pathogenic microorganisms and is safe for internal and external use. (See Chapter 3 for details on why colloidal silver works, how to use it, and how to inexpensively make your own.) It's used with copper (below) for swimming pools and hot tubs.
- ◆ **Copper.** When used alone or with silver (above), copper is very effective in disinfecting and sanitizing hot tubs and swimming pools without harmful chemicals, and with no damage to the tub or pool. The ions from the silver and copper (sometimes with zinc added) kill pathogens and prevent algae growth. Ions can be generated passively (particles slaking off from bars) or electronically.
- ◆ **Distilled White Vinegar.** Cheap commercial distilled white vinegar is one of the simplest vinegars available. It's made from grain (usually corn), water, and yeast that ferments the mixture into alcohol. Then the alcohol is exposed to the air, and with the help of certain bacteria, it oxidizes and produces acetic acid. The acetic acid is then filtered and diluted to a minimum of 4% concentration, yielding the final product of white vinegar. Many companies make distilled white vinegar from grain that's left over from other food processing. While white vinegar is not healthy to eat (despite the food industry's claims to the contrary), it's great for cleaning. It removes mineral deposits from metal and is part of a recipe to eliminate pesticides from produce.

- ◆ **Diatomaceous Earth (DE).** The powdered remains of fossilized, single-celled *diatoms*. The sharp edges of DE don't hurt humans or animals when handled, but pierce the exoskeletons of insects. DE is used outdoors and indoors for pest control. Food grade DE can also be safely eaten to eliminate intestinal parasites. However, inhaling the fine DE powder can irritate and damage the lungs.
- ◆ **Enviro-One™.** This special formula colloidal micelle formula, designed for the chemically sensitive, is biodegradable, non-fuming, non-reactive, and fragrance free. Made from fatty acids, vegetable- and plant-based enzymes and minerals, organic alcohol, coconut oil, folic acid, vanilla, and de-ionized water, it cuts grease very well for all types of household cleaning. It's so safe, some people even use it as a mouthwash. Unlike even "pure" or simple homemade soaps, it doesn't leave any film whatsoever, so it's safe and effective for personal bathing and as a shampoo. Enviro-One™ also has impressive, proven germ-fighting abilities. It can be bought concentrated, and then diluted according to the purpose for which it's being used. See Appendix A under "Personal Care and Household Cleaning Products."
- ◆ **Essential Oils (EOs).** More than being pleasingly fragrant (as wonderful as that is), many essential oils have antibacterial, antiviral and antifungal properties. They work well for repelling insects and other pests, for cleaning and conditioning wood, disinfecting the air, and eliminating odors. If pure enough, EOs can be used on the skin to soothe and eliminate rashes and infections, and they can be inhaled to eliminate pathogens in the lungs. If you're putting the EO on your skin or inhaling it, make sure it hasn't been adulterated with solvents, additives and other synthetic chemicals, either during distillation or after extraction. Most EOs must be diluted in a carrier oil (such as coconut, avocado or jojoba oil) because they're too concentrated to put directly onto the skin or inhaled.
Genuine lavender can be expensive, but its botanical relative lavandin works fairly well as an alternative. CitraSolv® is a commercial orange oil that's used for laundry and cleaning, and is a great spot remover. However, it can be harsh, so be careful. (See listing for CitraSolv® on previous page.)
- ◆ **Grapefruit Seed Extract (GFSE).** Not to be confused with grapeseed extract (GSE), grapefruit seed extract functions as a potent germicide but is completely safe. It can be used as a preservative in face cream, deodorant and other personal care products. It's even taken internally to combat pathogens, when used in the correct amounts and dilutions. The best and safest brand is from NutraBio.
- ◆ **Hydrogen Peroxide (Food Grade, usually 3% solution).** This safe, inexpensive and versatile substance is antifungal, antiviral, and antibacterial—so sterile, in fact, that it's used by the semiconductor industry in their "clean rooms," which are up to 100 times cleaner than any hospital operating room. Hydrogen peroxide (H_2O_2) breaks down into water (H_2O) and oxygen (O_2). For years, industry has been using it for agriculture (for soaking seeds to make them sprout faster); aseptic packaging (for beverages that stay fresh for a long time in heavy cardboard containers); as a bleaching agent for food and food-related paper products (toilet paper, tissues, coffee filters, paper towels); as a dough conditioner (packaged bakery products); and much more. Use in spray bottle with filtered or spring water at a 3% dilution. It's completely safe, but avoid the eyes. Food grade H_2O_2 can also be ingested for therapeutic and medical purposes; see Chapter 3 for more information.
- ◆ **Sea Salt.** You'll be using this salt for its abrasive and astringent qualities, so it's okay to buy processed sea salt, which is bleached and contains mostly sodium minus its naturally occurring trace minerals. However, make sure the sea salt doesn't contain additives. Chemicals that allow it to be easily poured are quite toxic.
- ◆ **Xylitol.** This highly processed sugar alcohol (called a *polyol*) can be extracted from many types of plants, and is refined into crystals or a white powder. Most xylitol is manufactured in China from genetically engineered corn; so instead, buy xylitol made in the United States or Europe from birch bark. Xylitol has a fair track record for preventing bacteria from sticking to surfaces, so it's useful for dental needs and sinus washes. See Chapter 3 for more information.
- ◆ **Zeolite.** This is a naturally occurring mineral with a specially shaped molecule that traps toxins without leaching anything out. Zeolite is the main ingredient of kitty litter. It's also used to eliminate other odors and even for mopping up oil spills. Bought as chunks or powder, it can be hung in a mesh bag in a room or sprinkled onto carpets and spills. Zeolite chunks can be reused if refreshed in sunshine.

What To Use and How To Use It

Always test an unknown cleaner on a small area to make sure there's no undesirable reaction.

House and Garden

1. General Cleaning (Most)

- ◆ **Enviro-One™**. Use suggested dilution.
- ◆ **Dr. Bronner's Soaps, many kinds** (not detergent, which is somewhat caustic).

2. Bathroom—Toilet, Sink, Tile, Grout

- ◆ **Enviro-One™**. Use suggested dilution with abrasive plastic pads or stiff brush.
- ◆ **Bar Keeper's Friend®**, *original powder only*. Sprinkle on, scrub, wipe off.
- ◆ **Baking Soda (Bicarbonate of Soda or Sodium Bicarbonate)**. Mix into a paste, apply, rinse or wipe.
- ◆ **Citrasolv®**, *concentrated cleaner & degreaser only*. Dilute in water. Can be mixed with Enviro-One™.

3. Carpet

Carpets trap hair, dust and mold; they can never be totally cleaned. Throw rugs are more hygienic.

- ◆ **Powdered Zeolite or Baking Soda**. Sprinkle on carpet. Leave overnight, then clean with Enviro-One™.
- ◆ **Enviro-One™**. Use a new carpet shampooer that has never been contaminated with other cleaners or chemicals. (Dr. Bronner's soaps are an acceptable substitute, but they might be harder to rinse.)

4. Dishes and Pots

- ◆ **Enviro-One™**. For dishwasher, use suggested dilution. For washing by hand, let Enviro-One™ sit a little longer than you'd leave on commercial detergent. It doesn't foam much and you want to make sure that it has time to cut grease (and remove germs).
- ◆ **Baking Soda**. For pots that need scrubbing. Make into a paste with water.
- ◆ **Bar Keeper's Friend®**, *original powder only*. If using Bar Keeper's Friend® on exceptionally greasy pots, rinse well and then wash again with Enviro-One™, because Bar Keeper's® leaves a slight residue.
- ◆ **Coffee (Liquid) and Coffee Grounds**. This works very well for stubborn grease (which is why some artisan soapmakers use the liquid and grounds in their handmade products).

5. Drain Cleaner for Toilet, Sink and Bathtub

Lye (commercial drain cleaner) is a caustic solvent with a pH of about 13.0—highly alkaline, burning like acid. At best, the lye may "merely" spill onto your hands and cause severe chemical burns (which you should cover with something acidic, such as vinegar or lemon juice). At worst, it may suddenly spray into your face and mouth, causing blindness and death. A standard tool for the toilet is a plunger, which should be used first. Special, inexpensive plungers are made for the sink that look like small toilet plungers with much shorter handles.

- ◆ **Plunger**. Use first.
- ◆ **Cold or Hot or Boiling Water**. (If you have plastic piping, you can use hot but not boiling water.) Fill a bucket and pour water into sink or toilet. The force of the water should clear the pipe. Heat from hot or boiled water should loosen the grime. If necessary, use a plunger also.
- ◆ **Distilled White Vinegar and Baking Soda**. For sink, drain water if possible. Pour ½ cup of baking soda down the drain, and then ½ to 1 cup of vinegar. Mixture will bubble and foam, which helps loosen the material stuck in drain. Let mixture sit in the drain for 5 to 30 minutes. If a sink is clogged, cover drain with a drain plug to keep the reaction below the surface. If a toilet is clogged, do *not* cover. Add at least 1 gallon of water to flush. If necessary, use a plunger or snake (next). If a drain is still clogged, repeat. Use vinegar and baking soda with a garbage disposal too.
- ◆ **Snake**. This basic plumber's tool looks like a long, thick, flexible metal rope. Keep inserting the snake into the drain. When the snake gets stuck, turn it so it catches onto whatever is clogging the drain. Slowly pull out the snake, bringing the material with it.

6. Fabric Softening, Anti-Static Effects

Fabric softener was invented at the same time as petroleum-based synthetic fabrics to prevent static cling. Synthetics prevent the skin from breathing; wear natural fibers (cotton, silk, wool, bamboo, rayon, linen).

- ◆ **Distilled White Vinegar.** To soften fabric, add ¼ cup to the wash cycle. To eliminate static cling, add ¼ cup to the rinse cycle. Also to reduce static cling, allow clothes to completely or partially dry outside in the sun. Be aware that repeated use of vinegar can weaken fabric.

7. Floors—Marble, Granite, Tile, Wood, Bamboo, Linoleum, Laminate

- ◆ **Enviro-One™.** Use suggested dilution.
- ◆ **Dr. Bronner's Soaps.**
- ◆ **Citrasolv®,** concentrated cleaner & degreaser only.

8. Fruit and Vegetable Wash (to remove many pesticides, fungicides and herbicides, but not all)

- ◆ **Food Grade 3% Hydrogen Peroxide.** Spray onto produce, leave for 5 minutes, rinse with water.
- ◆ **Enviro-One™.** Buy it already diluted in a spray bottle, or you can dilute it yourself in your own bottle (the company provides dilution instructions). Spray, let sit for 5 minutes, rinse with water.
- ◆ **Baking Soda and Pure Water.** Dissolve 1 teaspoon of baking soda in 2 cups of pure water. Soak berries and similar produce for 10 minutes; denser fruits and vegetables require 15 minutes. Rinse.
- ◆ **Distilled White Vinegar and Pure Water.** Use 4 parts filtered or spring water to 1 part vinegar. Soak berries and similar produce for 10 minutes; denser fruits and vegetables require 15 minutes. Rinse.

9. Furniture Polish / Wood Conditioner

Mineral oil is a plastic, made from petroleum. Don't use it, especially not on wooden kitchen utensils.

- ◆ **Lemon Essential Oil.** A main ingredient in many commercial polishes, pure lemon oil can be bought in bulk. It conditions all wood (including wooden musical instruments). Simply put several drops on soft cloth and apply to wood. Reapply as often as needed.

10. Germ, Mold and Mildew Inhibitor

- ◆ **Enviro-One™.** Essential Oils may be added for fragrance and additional (optional) germicidal action.
- ◆ **Distilled White Vinegar.** Mix equal parts of vinegar and water in a spray bottle. If adding salt, use 2 tablespoons. Spray and rinse.
- ◆ **Essential Oils (EOs) in Water.** Combination: Clove Bud, Lemon, Cinnamon Bark, Eucalyptus, Rosemary. Optional: Oregano, Tea Tree, Thyme. Put several drops of EOs into water in spray bottle.
- ◆ **Dr. Bronner's Soaps: Lavender, Peppermint, Eucalyptus, Tea Tree (liquid).**
- ◆ **Borax.** For germicidal activity. Follow directions on box.

11. Glass Cleaner—Windows and Mirrors

Use a soft cloth made specifically for these surfaces to avoid streaking. Sometimes the cloth alone is sufficient.

- ◆ **Distilled White Vinegar and Water.** Apply equal parts of water and distilled white vinegar with a spray bottle, then dry with a soft cloth.

12. Laundry (and spot removal for stubborn stains on clothing and other fabrics)

- ◆ **Enviro-One™.** For cleaning. Use suggested dilution.
- ◆ **Citrasolv®,** concentrated cleaner & degreaser only. Also spot removal. Add Enviro-One™ if you like.
- ◆ **Baking Soda.** For very smelly clothes, soak in soda before rinsing. Can be used with other ingredients.
- ◆ **Borax.** For tough stains and smelly clothes.

13. Leather Cleaner and Odor Remover

- ◆ **Distilled White Vinegar.** Put more water than vinegar in spray bottle. Wipe clean with plain water.
- ◆ **Baking Soda.** Spread, leave on 30 minutes or even overnight to absorb odors, wipe clean.
- ◆ **Essential Oils.** Citrus oil to freshen. Coffee essential oil to remove odors. Apply more than once.

14. Metal Cleaner

- ◆ **Distilled White Vinegar.** Soak item, then rinse. Removes tarnish and makes items shiny.
- ◆ **Bar Keeper's Friend®**, original powder only.
- ◆ **Baking Soda (Bicarbonate of Soda or Sodium Bicarbonate).** Mix into a paste, apply, rinse or wipe. This works fairly well for silver.
- ◆ **Commercial Natural Preparation:** Earth Friendly Products® Silver Polish (works very well for silver, much better than baking soda).

15. Mothball Replacement

Solid chemical mothballs contain naphthalene, paradichlorobenzene and/or dichlorobenzene, and become gaseous when exposed to air. They're carcinogenic and toxic to the nervous system, liver and kidneys. Use herbs and essential oils. They confuse the female moths' scent mechanism so they don't lay their eggs in clothing. If there are no eggs, no larvae hatch to eat holes in the material. Before storing clothes, wash and dry thoroughly; moths are attracted to human scents. Clean storage containers and drawers. Put clothing in sealed containers. If clothes have already been stored in mothballs, wash them thoroughly before wearing them.

- ◆ **Cloves, Lavender, Spearmint, Rosemary, and Thyme.** For the dried herbs, mix 2 pounds of whole cloves with ½ pound each of the other herbs. Store in dresser or closet in cheesecloth bag(s) or cotton handkerchiefs tied at the ends. Other herbs to use include: Cinnamon bark. Citronella. Eucalyptus. Peppercorns (black), slightly crushed. Tansy. Cedar wood shavings may also help. You can refresh with essential oils of same.
- ◆ **Essential Oils (EOs) of the Above.** Put EOs into aromatherapy diffuser and let oils diffuse into the air. You can also refresh the dried herbs with the essential oils.
- ◆ **Neem Oil and Enviro-One™.** If you are already infested with wool moths, mix ¼ cup of neem oil with ½ gallon of water and a few ounces of Enviro-One™. Put into spray bottle and spray.

16. Odor Eliminator / Air Freshener / Clothing Deodorizer

Spraying clothes with hydrogen peroxide and/or Enviro-One™, letting the fabric dry in the sun, and repeating the process three or more times, will usually eliminate fabric softener from the cloth. Wash with baking soda, Enviro-One™, and essential oils or CitraSolv®. It can take several weeks or even months to remove the toxic odors.

- ◆ **Hydrogen Peroxide, 3%.** For clothing: Spray on clothing and hang in sun to dry. Repeat if necessary.
- ◆ **Enviro-One™.** For clothing: Spray concentrate on clothing, hang in sun to dry. Wash. Repeat if necessary.
- ◆ **Baking Soda.** For air: Leave in bowls to absorb odors. For clothing: Dust onto clothing, let it sit, launder.
- ◆ **Essential Oils.** For air or on clothing: Lavender. Citrus (all). Peppermint. Spearmint. Cedar. A mixture of these or similar oils. Put into spray bottle with mostly water and spray. Or use aromatherapy diffuser. For clothing: Put into spray bottle with mostly water and spray onto clothing.
- ◆ **Zeolite.** For air: Place chunks in mesh bag and hang. For clothing: put clothing and powder in plastic bag and seal for several days or weeks. Repeat if necessary.

17. Oven Cleaner

Use a steel wool or plastic scrub pad.

- ◆ **Bar Keeper's Friend®**, original powder only. Wet very lightly with water or a wet pad and scrub. Wash hands thoroughly after cleaning.
- ◆ **Salt and Baking Soda.** Mix equal parts of salt and soda. Add water to make paste, and scrub.
- ◆ **Enviro-One™.** Use suggested dilution. Spray on oven and let it sit for awhile.

18. Pest Control (Insects, Rodents, and Other Garden Pests)

- ◆ **Essential Oils (EOs): Cedar(wood). Citronella. Eucalyptus. Lemon. Lemongrass. Neem. Pennyroyal. Peppermint. Rue. Rosemary. Wintergreen.** Personal repellent for flying and crawling insects, including aphids, fleas, mosquitoes, and ticks. Mix 10 drops of each in about 4 oz. of water and spray it on skin. Or, apply undiluted EOs on countertops or wherever bugs walk.
- ◆ **Cinnamon and Clove Essential Oils.** Work well for ants and gnats. Apply undiluted to affected areas. For ants, mix equal parts of vinegar and water in spray bottle, add essential oil(s) and spray. You can also use cinnamon sticks and whole cloves.
- ◆ **Clove Essential Oil.** For rats and mice as well as gnats. Apply undiluted if possible.
- ◆ **Coffee Grounds.** For killing slugs, mix into soil. You can also spray a dilute solution of coffee onto the leaves of the plants.
- ◆ **Enviro-One™.** Use suggested dilution. Can be sprayed directly on plants and surrounding dirt to remove contaminants and unwanted garden pests, including bugs, but will not kill beneficial insects such as ladybugs. Plants, able to absorb nutrients more efficiently, grow bigger and faster.
- ◆ **Diatomaceous Earth.** Spread liberally on the ground outside against the walls of your home. Get food grade (not pool grade), so it's safe for pets in case they ingest it. Don't inhale it.
- ◆ **Borax.** Use in ways similar to diatomaceous earth.

19. Purification of Swimming Pools, Hot Tubs, Jacuzzis, etc.

- ◆ **Silver and Copper Ion Bars.** Sometimes they also contain zinc. The bars are usually passive, with ions naturally seeping into the water, which is cleaned. The ions can also be delivered via electricity (which provides more control of how many ions are flowing into the water, and the rate at which they are seeping into the water). Ozone is another great option (see Chapter 3), though more expensive.

20. Removing Skunk Odor from a Dog (and odors from other things as well)

A tomato juice bath (a common folk remedy) removes only some of the odor. This effective recipe, developed by materials engineer Paul Krebaum from Lisle, Ohio, removes oily sulfur compounds by oxidizing (adding oxygen to) them. Mix the ingredients below in a large open container; they foam profusely and could explode if they're inside a closed container. Rub the solution into the animal's fur, avoiding the eyes (the formula's safe, but will sting). When you no longer smell the skunk odor, rinse. If odor persists (as it might if it's from an old skunk attack), leave solution on longer, or apply twice.

- ◆ **Hydrogen Peroxide, 3%,** 1 quart.
- ◆ **Baking Soda (Bicarbonate of Soda or Sodium Bicarbonate),** ¼ cup.
- ◆ **Enviro-One™,** 1 to 2 teaspoons (diluted 10:1).

21. Weed Control (Safe Herbicides)

Weed control can be difficult, so it's tempting to use poisons. However, the harm to all living things from poison is almost incalculable, so it's worth using natural methods.

- ◆ **Boiling Water.** Plain boiling hot water poured directly on top of the weeds will kill some or all.
- ◆ **Distilled White Vinegar.** Poured directly on top of the weeds, the vinegar will kill some or all.
- ◆ **Propane Torch / Flamer / Weed Flamer / Weed Torch.** Portable, lightweight, long rod fueled by propane kills weeds if you're willing to do the labor. Passing a flame over a weed for only one-tenth of a second kills it. The weed will change from a glossy to a matte finish. It may not droop immediately, but will wilt and die within a few hours. A perennial weed will send up new shoots within a week, but additional treatments will deplete the stored energy in the roots and the weed will eventually die. Watering the soil a bit beforehand will conduct heat and kill some of the seedlings in the soil. Flamers are especially efficient for smaller areas (as compared to farmland or large-acre plots). Burning a younger plant is also more efficient than burning a more mature plant.

Personal Care

22. Bathing

- ◆ **Enviro-One™**. Use suggested dilution. As with all soaps, leave on 30 seconds to eliminate bacteria, wash off. If you want more suds, use a dispenser that adds air to the liquid so it foams. You can add a few drops of your favorite essential oil if you like.
- ◆ **Dr. Bronner's**. Use diluted. Comes in plain castile or with pure, great-smelling essential oils. Lavender, rose and almond are a bit milder than the peppermint, tea tree, eucalyptus or even the citrus.

23. Deodorant / Antiperspirant

Commercial products mask armpit odor with strong perfumes chemically related to petroleum. Antiperspirants inhibit sweating (a natural bodily function), which prevents wastes from exiting through the skin. Most contain toxic aluminum that clogs pores and prevents the sweating that causes odors—but still seeps into the lymph nodes and travels to the breasts. Aluminum is linked to breast cancer and is a neurotoxin (associated with Alzheimer's, Parkinson's and dementia). Safe deodorants are commercially available, but you can make your own inexpensively. Essential oils kill bacteria.

- ◆ **Hydrogen Peroxide, 3%**. Spray under arms as often as needed.
- ◆ **Colloidal Silver**. Spray under arms as often as needed.
- ◆ **Essential Oils, especially Lavender**. The oils should be organic, with nothing added. Add between 10 and 20 drops of oil to several ounces of water. Spray under arms.
- ◆ **Baking Soda (Bicarbonate of Soda) or Arrowroot**. Dust underarms with either powder. If you like, before applying, spray on essential oils, colloidal silver, or peroxide for additional protection.
- ◆ **Grapefruit Seed Extract**. Wet armpit. Apply two drops of GFSE under arms as often as needed.
- ◆ **Commercial Natural Preparation**: For Pit's Sake! (a G.B. Proudfoot's product).

24. Facial Cleanser

- ◆ **French Green Clay**. Make paste with pure water for a mask. Wait until it dries; rinse. This will draw out dirt and bacteria. (Re-moisturize with grapefruit essential oil added to refined coconut oil.)

25. Shampoo (Humans and Animals)

Unlike even soaps of pure glycerine or simple castille, Enviro-One™ doesn't leave residue on skin. It works great for human shampooing and on dogs, too. You can add a few drops of your favorite essential oil if you like.

- ◆ **Enviro-One™**. Use dilution suggested by company.

26. Shampoo for Fleas, Ticks and Head / Body Lice

- ◆ **Enviro-One™**. Use suggested dilution. Kills harmful insects (ticks, fleas and lice) by suffocating them. Leave on hair and body for 30 minutes, then rinse. Comb hair with fine tooth comb to eliminate eggs. Reapply if needed. This is the only product I can recommend for this purpose.

27. Talcum Powder

The minerals that comprise talc are near deposits of carcinogenic asbestos, and become contaminated.

- ◆ **Arrowroot or Baking Soda (Bicarbonate of Soda)**.

28. Teeth and Gum Care (tooth powder, toothpaste and mouthwash)

All these ingredients can be used interchangeably for the teeth and gums. For tooth paste instead of powder, add coconut oil (which has antimicrobial properties) to bind the ingredients together. For a mouthwash, use aloe vera liquid. Some ingredients may work better for you than others; experiment.

- ◆ **Essential oils**: Clove. Cinnamon bark. Spearmint. Peppermint. Tea tree. White oak bark (in powder form too). Grapefruit seed extract. Aloe vera (gel or liquid). As powders or granules: Baking soda. Sea salt. Xylitol. By itself: Colloidal silver. To increase gum circulation: Cayenne (small amount).
- ◆ **Commercial Natural Preparations, Toothpaste**: Coral White®. Pearlie White® (remineralizes teeth).
- ◆ **Commercial Natural Preparations, Gums**: Tooth & Gums Tonic®. Peri-Gum®.

Create a Detox Footbath for Ten Dollars

Be sure you put your feet in the right place, then stand firm.

—ABRAHAM LINCOLN, 16TH PRESIDENT OF THE UNITED STATES (1809–1865)

History and Theory of How This Works

The detoxification footbath was developed circa 1900 in London. It consisted of two tanks, each containing water and an electrode, into which a foot was placed. Very mild current passed through the body, allowing metals and other substances to be drawn out of the body via osmosis.

Modern commercial footbaths contain a single chamber that accommodates both feet and both (positively and negatively charged) electrodes. The water tends to become a bit darker during the soak. Aficionados report feeling better, citing the change in water color as proof that the footbath works. Detractors point out that the tint of the water changes after the electrodes are turned on, without anyone ever placing their feet in the chamber!

The detractors are correct. Changes in water color are due to rust or other metallic accumulations on the iron electrodes. These gadgets are outrageously overpriced (some at over two thousand dollars), accompanied by marketing hype to justify the cost. Nevertheless, the basic premise is sound—drawing toxins from the body via a non-invasive electrical charge—as long as there are two separate tubs for the feet and one electrode is in each tub. Most toxins have a positive charge. Positively-charged toxins are attracted to a negatively-charged electrode. In the following setup, users find that if the water does change color, it's the negatively-charged side that becomes discolored while the positively-charged side does not.

Supplies

You can make your own effective apparatus for about ten dollars with simple parts bought from a basic electronics store or hardware store.

- ◆ Two shallow plastic bins the size of shoeboxes, each large enough to hold a single foot. Make sure they are plastic and not metal. (The 9-volt battery you'll use isn't strong, but it still might cause an unpleasant jolt if you use a metal pan rather than plastic.)
- ◆ Filtered or distilled water.
- ◆ Celtic, sea, Dead Sea, or Epsom salt.
- ◆ Two stainless steel spoons, bent in a certain way (see photo, next page).
- ◆ One 9-volt battery.
- ◆ Two “alligator” clips of different colors. One wire will connect to the positive side of the battery, and the other wire will connect to the negative side of the battery (see photo, next page). In the United States it's customary to use black and red, but any two colors can be used as long as you dedicate one alligator clip to the POSITIVE side of the battery and the LEFT foot, and the other alligator clip to the NEGATIVE side of the battery and the RIGHT foot. For this discussion, I will use the colors red and black.

Directions

1. *Water.* Put at least 2–3 inches of warm filtered or distilled water into each bucket.
2. *Salt.* Mineral salts enable water to conduct electricity more easily. If you use distilled water, add a half a teaspoon or a teaspoon of Celtic salt, Dead Sea salt, plain sea salt without additives, or Epsom salt into each side and stir. If you're very sensitive, you'll need just a little salt or no salt. If the water already contains a fair amount of minerals, you won't need to add salt.
3. *Bend the Spoons.* One good way for the spoons to act as electrodes is to bend them (photo, opposite) so that each one hangs over the side of a bin (photo, below). This allows you to connect an alligator clip to the stem of the spoon with the bowl of the spoon in the water.
4. *Wire the Spoons.*
Attach the RED (POSITIVE) alligator clip to the bowl of the LEFT-hand spoon.
Attach the BLACK (NEGATIVE) alligator clip to the bowl of the RIGHT-hand spoon.
(We are assuming that the wires are red and black, but you can use any color wires as long as the POSITIVE terminal is for the LEFT foot and the NEGATIVE terminal is for the RIGHT foot.)
Hang one spoon over each bin. You may bend the spoons so that the bowls reach lower into the water, which will allow you to use less water.
5. *The Footbath.* Put one bare foot in each spoon-filled tub *before* you connect the alligator clips to the battery.
RIGHT foot = NEGATIVE (BLACK) side.
LEFT foot = POSITIVE (RED) side.

Viewed as though you were looking at someone else doing a footbath.

6. *Wire the Battery.* On the 9-volt battery:
Attach the other end of the RED alligator clip to the POSITIVE (+) terminal. POSITIVE will go with the LEFT side.
Attach the other end of the BLACK alligator clip to the NEGATIVE (-) terminal. NEGATIVE will go with the RIGHT side.
Your footbath is now charged. Leave your feet in for 30 minutes to one hour.

Viewed as though you were looking at someone else doing a footbath.

7. *Change the Spoons Periodically.* Most so-called stainless steel contains some nickel and chromium (not in their bioavailable mineral forms, but in their toxic metallic forms). After a period of being electrolyzed in water, the stainless steel will degrade, even if only a bit, which will allow metallic ions to disperse into the water where they can be absorbed through the feet.
Some types of stainless steel are safer than others. T304 alloy stainless steel (an industrial term for grading stainless) is more susceptible to erosion than the safer T316, which is created to withstand corrosion in saltwater environments.
Change the spoons periodically, especially if you are doing many footbaths.
Instead of spoons, you can use carbon electrodes.
8. *Use As Often As Needed.* You may feel areas of your feet (especially the top or instep) sting and itch a bit, but this is normal. If you're too uncomfortable, reduce the amount of salt in the water, the amount of time you spend soaking your feet, and/or the amount of water.
This footbath helps eliminate Lyme and mold toxins, heavy metals, and some chemicals. People with certain infections, fibromyalgia, rheumatoid arthritis, and some neurological conditions report feeling better after a series of footbaths. Soak your feet at least once a day. Some people can handle only 5 minutes at first, and gradually increase the time. The water in the left side especially may change color slightly as toxins are released.

Recent Studies on the Dangers of Harmful Electromagnetic Fields (EMF)

Technology can be our best friend, and technology can also be the biggest party pooper of our lives. It interrupts our own story, interrupts our ability to have a thought or a daydream, to imagine something wonderful, because we're too busy bridging the walk from the cafeteria back to the office on the cell phone.

—STEVEN SPIELBERG, FILM DIRECTOR (BORN DECEMBER 18, 1947)

Electromagnetic (EM) fields surround us all the time. The natural diffuse EM radiation emitted by the sun is very different from the human-made, concentrated, EM radiation from cell phones, TV and radio transmitters, computers, WiFi, tablets, smart meters, microwave ovens, kitchen appliances, vacuum cleaners, air conditioners, airport scanners, and anything with an engine (to name just a few items in our technological age). These electronics break the chemical bonds in our DNA, leading to almost unlimited malfunctions in all systems: immune, nervous, hormones, respiratory, circulatory, digestive. There's no part of the body that doesn't react negatively to these harmful electromagnetic fields, which are sometimes referred to as *EMFs*, *electrosmog*, or *electropollution*.

Despite copious documentation showing the damage caused by electropollution, many governments, their agencies, and the telecommunications industry deny that harm exists. Corporate media typically lies, insisting that there's nothing to worry about and implying that anyone who's concerned is being paranoid, irrational, and idiotic. However, at the University of Washington, Dr. Henry Lai's data on radio frequency studies shows a

very different story. In the studies that are *not* funded by the telecommunications industry, 70% clearly indicate the harm of WiFi (with 30% showing “no effect”); while in the studies that *are* funded by the telecommunications industry, only 32% show harm (with the “no effect” category spiking to 68%). In June 2015, investigative journalist Norm Alster at the Harvard University Center for Ethics issued a paper called “Captured Agency: How the Federal Communications Commission Is Dominated by the Industries It Presumably Regulates.” And some readers might be surprised to learn that as long ago as 1971, the United States Navy commissioned a compilation of over two thousand studies on the effects of microwaves and radio frequencies on living systems. Even then, there was grave concern about how various human-made EM fields could (and did) negatively affect humans and animals.

Here is a very small sample of studies on the dangers of electrosmog. New research is constantly being published (despite the resistance of those who'd like to conceal it), so keep current. In the meantime, see Chapter 1 for more details on how and why EMF is harmful, and be sure to use EMF protection (see Appendices A and C).

“Radiofrequency Radiation-Related Cancer: Assessing Causation in the Occupational/Military Setting.” Peleg M, Nativ O, Richter ED. *Environmental Research*, May 2018, Volume 163, 123–133.

[*Highlights:* Exposures incurred in military settings have significantly increased the risk of hematolymphatic cancers. The ICNIRP radiation limits don’t guarantee human safety in either occupational or military settings, and the limits should be replaced by honest guidelines based on what we know about human biology. These results confirm findings of brain tumors in cellphone users and “make a coherent case for a cause-effect relationship. We are unable to find alternative explanations. We endorse [researcher] Hardell’s call for classifying this exposure as an IARC group 1 carcinogen and for updating the exposure standards.”]

2013

“Use of mobile phones and cordless phones is associated with increased risk for glioma and acoustic neuroma.” Hardell L, Carlberg M, Hansson Mild K. *Pathophysiology*, April 2013; 20(2):85–110.

[From Abstract: “The IARC [International Agency for Research on Cancer] carcinogenic classification does not seem to have had any significant impact on governments’ perceptions of their responsibilities to protect public health from this widespread source of radiation.”]

“Multi-Focal Breast Cancer in Young Women with Prolonged Contact Between Their Breasts and Their Cell Phones.” West JG, Kapoor NS, Liao SY, Chen JW, Bailey L, Nagourney RA. *Case Reports in Medicine*, August 19, 2013, Article ID 354682.

2012

“Health implications of long-term exposure to electrosmog.” Karl Hecht, 2012; translated from German to English in 2016. [This report, which cited 878 studies from 1960–1997 that discussed the negative effects of EMFs, was suppressed by the German government as soon as it was published.]

Samuel Milham. *Dirty Electricity: Electrification and the Diseases of Civilization*, 2nd Ed. (Bloomington, Indiana: iUniverse, 2012). **Book**

“The Effects of UV Emission from CFL Exposure on Human Dermal Fibroblasts and Keratinocytes in Vitro.” Mironava T, Hadjiargyrou M, Simon M, Rafailovich MH. *Photochemistry and Photobiology*, November-December 2012; 88(6):1497–1506.

[From Abstract: “Cells exposed to CFLs exhibited a decrease in the proliferation rate, a significant increase in the production of reactive oxygen species, and a decrease in their ability to contract collagen. Measurements of UV emissions from these bulbs found significant levels of UVC and UVA (mercury [Hg] emission lines), which appeared to originate from cracks in the phosphor coatings, present in all bulbs studied. The response of the cells to the CFLs was consistent with damage from UV radiation.”]

2011

“Re-analysis of risk of glioma in relation to global telephone use: comparison with the Results of the Interphone international Case-control Study.” Hardell L, Carlberg M, Hansson Mild K. *International Journal of Epidemiology*, Volume 40, Issue 4, August 1, 2011, 1126–1128.

“Pooled Analysis of Case-Control Studies on Malignant Brain Tumours and the Use of Mobile and Cordless Phones Including Living and Deceased Subjects.” Hardell L, Carlberg M, Hansson Mild K. *International Journal of Oncology*, February 2011, 38(5):1465–1474.

“Adult mortality from leukemia, brain cancer, amyotrophic lateral sclerosis and magnetic fields from power lines: a case-control study in Brazil.” Marcilio I, Gouveia N, Pereira Filho ML, Kheifets L. *Revista Brasileira de Epidemiologia [Brazilian Journal of Epidemiology]*, December 2011; 14(4):580–588.

[From Abstract: “Our findings are suggestive of a higher risk for leukemia among subjects living closer to transmission lines, and for those living at homes with higher calculated magnetic fields, although the risk was limited to lower voltage lines.”]

“Occupational and residential exposure to electromagnetic fields and risk of brain tumors in adults: a case-control study in Gironde, France.” Baldi I, Coureau G, Jaffré A, Gruber A, Ducamp S, Provost D, Lebailly P, Vital A, Loiseau H, Salamon R. *International Journal of Cancer*, September 2011; 129(6):1477–1484.

[From Abstract: “These data suggest that occupational or residential exposure to ELF may play a role in the occurrence of meningioma.”]

2010

“Power-frequency magnetic fields and childhood brain tumors: a case-control study in Japan.” Saito T, Nitta H, Kubo O, Yamamoto S, Yamaguchi N, Akiba S, Honda Y, Hagihara J, Isaka K, Ojima T, Nakamura Y, Mizoue T, Ito S, Eboshida A, Yamazaki S, Sokejima S, Kurokawa Y, Kabuto M. *Journal of Epidemiology*, 20(1):54–61

[From Abstract: “A positive association was found between high-level exposure-above 0.4 microT-and the risk of brain tumors.”]

“Oxidative stress, melatonin level, and sleep insufficiency among electronic equipment repairers.” El-Helaly M, Abu-Hashem E. *Indian Journal of Occupational and Environmental Medicine*, September 2010; 14(3):66–70.

[From Abstract: “The electronic equipment repairers, exposed to ELF-EMF, are at a risk of oxidative stress and sleep insufficiency, which could be explained by lower plasma melatonin levels and higher MDA [malondialdehyde] levels. Health education about the hazards of ELF-EMF, shortening of exposure time per day, and taking antioxidant vitamins should be done to ameliorate the oxidative effect of EMF on those workers.”]

Non-Thermal Effects and Mechanisms of Interaction Between Electromagnetic Fields and Living Matter. ICEMS Monograph, Ramazzini Institute, edited by Livio Giuliani and Morando Soffritti. European Journal of Oncology Library, Bologna, Italy, Volume 5, 2010. **Book**

“Most cancer in firefighters is due to radio-frequency radiation exposure not inhaled carcinogens.” Milham Samuel. *Medical Hypotheses*, June 2009; 73(5):788–789.

[From Abstract: “Firefighters . . . [are at] increased risk of . . . leukemia, multiple myeloma, non-Hodgkin’s lymphoma, male breast cancer, malignant melanoma, and cancers of the brain, stomach, colon, rectum, prostate, urinary bladder, testes, and thyroid. Firefighters are exposed to a long list of recognized or probable carcinogens in combustion products and the presumed route of exposure to these carcinogens is by inhalation. Curiously, respiratory system cancers and diseases are usually not increased in firefighters as they are in workers exposed to known inhaled carcinogens. The list of cancers . . . strongly overlaps the list of cancers at increased risk in workers exposed to electromagnetic fields (EMF) and radiofrequency radiation (RFR). Firefighters have increased exposure to RFR in the course of their work, from the mobile two-way radio communications devices which they routinely use while fighting fires, and at times from firehouse and fire vehicle radio transmitters. . . . some of the increased cancer risk in firefighters is . . . therefore preventable.”]

“Melatonin and magnetic fields.” Karasek M, Lerchl A. *Neuro Endocrinology Letters*, April 2002;23 Supplement 1:84–87.

[From Abstract: “Extremely low frequency electric and magnetic fields generated by electric power distribution systems in the environment may be hazardous. . . . [We hypothesize] that the primary effects of electric and magnetic fields exposure is a reduction of melatonin synthesis which, in turn, may promote cancer growth.”]

“Residential exposure to power frequency magnetic field and sleep disorders among women in an urban community of northern Taiwan.” Li CY, Chen PC, Sung FC, Lin RS. *Sleep*, June 15, 2002;25(4):428–432.

“Does our electricity distribution system pose a serious risk to public health?” Henshaw DL. *Medical Hypotheses*, July 2002; 59(1):39–51.

[From Abstract: “Within 150m of powerlines, magnetic field exposures above 0.1 microT are postulated to result in 9000 excess cases of depression in adults and 60 cases of suicide. Electric field effects can mediate increased exposure to air pollution. Within 400m of powerlines, this may result annually in 200–400 excess cases of lung cancer, 2000–3000 cases of other illnesses associated with air pollution and 2–6 cases of childhood leukaemia. Seventeen cases of non-melanoma skin cancer might occur by exposure directly under powerlines.”]

2001

“Ionizing Radiation, Cellular Telephones and the Risk for Brain Tumours.” Hardell L, Hansson Mild K, Pahlson A, Hallquist A. *European Journal of Cancer Prevention*, January 2002, 10(6): 523–529.

“Mobile phones, heat shock proteins and cancer.” French PW, Penny R, Laurence JA, McKenzie DR. *Differentiation*, June 2001; 67(4–5): 93–97.

[From Abstract: “Upregulation of heat shock proteins (Hsps) is a normal defence response to a cellular stress. However, chronic expression of Hsps is known to induce or promote oncogenesis, metastasis and/or resistance to anticancer drugs. We propose that repeated exposure to mobile phone radiation acts as a repetitive stress leading to continuous expression of Hsps in exposed cells and tissues, which in turn affects their normal regulation, and cancer results.”]

2000

Mobile Telecommunications and Health, H.E.S.E-UK, 2000. This valuable and relatively unknown piece documents decades of early research on the genotoxicity of RF/microwave radiation. Ironically, this study by the ECOLOG Institute in Germany was funded by T-Mobile, a corporate giant of the Wireless Radiation Industry.

1997

"Leukemia following occupational exposure to 60-Hz electric and magnetic fields among Ontario electric utility workers." Miller AB, To T, Agnew DA, Wall C, Green LM. *American Journal of Epidemiology*, July 15, 1996;144(2):150-160.

"Cancer in electrical workers: an analysis of cancer registrations in England, 1981-87." Fear NT, Roman E, Carpenter LM, Newton R, Bull D. *British Journal of Cancer*, April 1996; 73(7):935-939.

"Extra low frequency electric and magnetic fields in the bedplace of children diagnosed with leukaemia: a case-control study." Coghill RW, Steward J, Philips A. *European Journal of Cancer Prevention*, June 1996; 5(3):153-158.

"Cancer incidence and mortality and proximity to TV towers." Hocking B, Gordon IR, Grain HL, Hatfield GE. *The Medical Journal of Australia*, December 2-16, 1996; 165(11-12):601-605.

[Conclusion, from Abstract: "We found an association between increased childhood leukaemia incidence and mortality and proximity to TV towers."]

"Incidence of breast cancer in Norwegian female radio and telegraph operators." Tynes T, Hannevik M, Andersen A, Vistnes AI, Haldorsen T. *Cancer Causes and Control*, March 1996;7(2):197-204.

[From Abstract: "Exposure to electromagnetic fields may cause breast cancer in women if it increases susceptibility to sex-hormone-related cancer by diminishing the pineal gland's production of melatonin."]

1995

"Exposure to Extremely Low Frequency Electromagnetic Fields and the Risk of Malignant Diseases—An Evaluation of Epidemiological and Experimental Findings." Hardell L, Holmberg B, Malker H, Paulsson LE. *European Journal of Cancer Prevention*, October 1995, Supplement 1, 3-107.

1994

"Carcinogenic risk of extremely-low-frequency electromagnetic fields: state of the art." Pira E, Zanetti C, Saia B. *La Medicina del lavoro* [Italian], November-December 1994;85(6):447-462.

1993

"Early pregnancy loss and exposure to 50-Hz magnetic fields." Juutilainen J, Matilainen P, Saarikoski S, Läärä E, Suonio S. *Bioelectromagnetics* 1993; 14(3):229-236.

"ELF magnetic fields, breast cancer, and melatonin: 60 Hz fields block melatonin's oncostatic action on ER+ breast cancer cell proliferation." Liburdy RP, Sloma TR, Sokolic R, Yaswen P. *Journal of Pineal Research*, March 1993;14(2):89-97.

1992

"Electromagnetic field effects on cells of the immune system: the role of calcium signaling." Walleczek J. *FASEB Journal* [Federation of American Societies for Experimental Biology Journal], October 1992;6(13):3177-3185.

[From Abstract: "During the past decade considerable evidence has accumulated demonstrating that nonthermal [non-heating] exposures of cells of the immune system to extremely low-frequency (ELF) electromagnetic fields (<300 Hz) can elicit cellular changes that might be relevant to in vivo immune activity. A similar responsiveness to nonionizing electromagnetic energy in this frequency range has also been documented for tissues of the neuroendocrine and musculoskeletal system. . . . Based on these findings it is proposed that membrane-mediated Ca²⁺ signaling processes are involved in the mediation of field effects on the immune system." Note that in the early 1990s, it was acknowledged that electrosmog played a huge, negative role in the alternation of cell and tissue function as well as immune response.]

"Alterations of the circadian melatonin rhythm by the electromagnetic spectrum: a study in environmental toxicology." Reiter RJ. *Regulatory Toxicology and Pharmacology*, June 1992; 15(3):226–244.

1991

"Electromagnetic field exposure and amyotrophic lateral sclerosis." [letter to the editor] Davanipour Z, Sobel E, Vu H, Will AD. *Neuroepidemiology* 1991;10:308.

1990

Cyril W. Smith and Simon Best. *Electromagnetic Man: Health and Hazard in the Electrical Environment* (London: J.M. Dent and Sons Ltd, 1990). **Book**

1989

Brodeur, Paul. *Currents of Death* (New York: Simon and Schuster, 1989). **Book**

"Case-control study of childhood cancer and exposure to 60-Hz magnetic fields." Savitz DA, Wachtel H, Barnes FA, John EM, Tvrđik JG. *American Journal of Epidemiology*; 128(1):21–38.

1988

"Overhead high-voltage cables and recurrent headache and depressions." Dowson DI, Lewith GT, Campbell M, Mullee MA, Brewster LA. *Practitioner*, April 22, 1988; 232(1447):435–436.

1987

"Some Effects of Electric Fields on Living Creatures." Watson DB and Neale, IA. *International Journal of Electrical Engineering Education*, July 1, 1987.

[The authors are testing a 50-Hz field, which is used in the electrical wiring of Europe and other continents. They also refer to the 60-Hz field used in North America.]

"Electrical Sensitivities in Allergy Patients." Choy RYS, Monro JA, Smith CW. *Clinical Ecology* 1987, Volume IV, Number 3, 93–102.

"The effect of environmental EMF on the health of juveniles and children and its protection." Jiang H. *Zhonghua Yu Fang Yi Xue Za Zhi* [Journal of Preventive Chinese Medicine], July 1987;21(4):205–208. [in Chinese]

"Effects of long-term exposure to a 400-kV, 50-Hz transmission line on estrous and fertility in cows." Algers B, Hultgren J. *Preventive Veterinary Medicine* 1987; 5 (1): 21–36.

1985

"Occupational exposure to electromagnetic fields and the occurrence of brain tumors. An analysis of possible associations." Lin RS, Dischinger PC, Conde J, Farrell KP. *Journal of Occupational Medicine*, June 1985; 27(6):413–419.

[From Abstract: "An epidemiologic study was conducted using data from the death certificates of 951 adult white male Maryland residents who died of brain tumor during the period 1969 through 1982. Compared with the controls, men employed in electricity-related occupations, such as electrician, electric or electronic engineer, and utility company serviceman, were found to experience a significantly higher proportion of primary brain tumors. An increase in the odds ratio for brain tumor was found to be positively related to electromagnetic (EM) field exposure levels. Furthermore, the mean age at death was found to be significantly younger among cases in the presumed high EM-exposure group."]

1983

"Incidence of cancer in the electronics industry: using the new Swedish Cancer Environment Registry as a screening instrument." Vågerö D, Olin R. *British Journal of Industrial Medicine*, May 1983; 40(2):188–192.

1979

"Relation between suicide and the electromagnetic field of overhead power lines." Reichmanis M, Perry FS, Marino AA, Becker RO. *Physiological Chemistry and Physics*, 1979; 11(5):395–403.

[The entire Abstract: "Laboratory studies have shown that electromagnetic fields similar to those from high-voltage transmission lines can produce biological effects. Surveys of the actual effects of such lines on exposed individuals usually have been hampered by complicating factors tending to blur the data. By means of a new approach, however, correlation has been established between the presence of transmission-line fields and the occurrence of suicides in part of the Midlands of England."]

1971

"Bibliography of Reported Biological Phenomena ('Effects') and Clinical Manifestations Attributed to Microwave and Radio-Frequency Radiation." Zorach R. Glaser, PhD, LT, MSC, USNR. Research Report Project MF12.524.015-0004B [on this typewritten copy, the "B" is unclear], Report No. 2. Naval Medical Research Institute, National Naval Medical Center, Bethesda, Maryland 20014, U.S.A., 4 October 1971. Second Printing, with Revisions, Corrections, and Additions: 20 April 1972 (Supersedes AD No. 734391).

References

A powerful agent is the right word. Whenever we come upon one of those intensely right words the resulting effect is physical as well as spiritual, and electrically prompt.

Note: Not every pathogen and disease in Chapter 5 (the Frequency Directory) is included here, because Chapter 5 is in itself an annotated index. However, this index does contain all of the primary (overview) categories in Chapter 5 and a few important health conditions listed in subheadings. For a complete directory of diseases, along with their frequencies, see Chapter 5.

Also note: A huge number of valuable books and research papers were used in the writing of this book. Space limitations made it impossible to list all the prominent authors and their publications. Therefore, the individuals listed here are limited to historical figures involved with Royal Rife, influential people in the modern Rife community who were quoted rather extensively, and selected scientists involved with medical research. No slight is intended of those who were omitted. You can always find these people and their work in the Endnotes and in References.

About The Author

Writer, educator, artist and musician, Nenah Sylver has devoted her life to the exploration of healing on mental, emotional, physical, and spiritual levels. Her early training in music led to subsequent studies in spirituality and physics—all complementary paths to her lifelong passion, the science of frequency.

Starting as a young adult, Nenah worked for two decades as a singer-songwriter, playing piano and guitar. Her performances include New York City coffeehouses and clubs, and colleges nationwide. She wrote lyrics and music for two off-off-Broadway plays and won half a dozen songwriting awards. She also performed for Hospital Audiences, Inc., an organization that brings music to adults and children in hospitals, residential treatment centers, prisons, nursing homes, and educational facilities.

In 1996, Dr. Sylver received her PhD from the Union Institute & University in Transformational Psychology, a multi-disciplinary program of holistic health, psychology, and gender studies. For fifteen years, she had a private practice in body-mind psychotherapy based on the principles of psychiatrist and natural scientist Wilhelm Reich. Then, in what began as a quest for solutions to her own health issues, Nenah started researching Royal Rife and his inventions along with other electromedical therapies. Her extensive knowledge of safe and effective holistic protocols eventually coalesced into five editions of *The Rife Handbook*.

Among other publications, Dr. Sylver's writing credits in the areas of psychology, feminism, health and social change include *The New Internationalist*, *Off Our Backs*, *Beiträge zum Werk von Wilhelm Reich* ("Contributions to the Work of Wilhelm Reich"), and the anthologies *Journeys of the Heart: Perspectives on Intimacy in America* (Brunner-Mazel), *Glibquips: Funny Words by Funny Women* (Crossing Press), *Closer To Home: Bisexuality and Feminism* (Seal Press), *An Introduction to Women's Studies* (Simon & Schuster), *Transforming a Rape Culture* (Milkweed

Editions), *Women, Culture, and Society: Readings in Women's Studies* (Simon & Schuster), *Bullying: Beyond the Schoolyard* (Teatro V!da), and *Energy Medicine Technologies* (Inner Traditions). Her volume of poetry, *Birthing*, was published by Woman in the Moon Publications. She has been cited in *Utne Reader* and *The New Yorker*. In addition, she published a short story in an anthology, *Woman in the Window* (STARbooks Press), which she also illustrated with original water color paintings.

In the past few decades, Nenah Sylver has become well known for her writing in the health field. In addition to articles in *Natural Living Today* and *Natural Food & Farming*, "Toxic Products, Deceptive Labels" appeared in *Nexus*. Dr. Sylver's comprehensive book, *The Holistic Handbook of Sauna Therapy*, was published in 2004. In 2008, the two-part article "Healing with Electromedicine and Sound Therapies" (which was excerpted from Appendix C of *The Rife Handbook*) appeared in *Townsend Letter*. Portions of *The Rife Handbook* have been translated into German, Korean, and Polish.

The author has appeared on NBC-TV and on the Pacifica radio station WBAI-FM in New York City to discuss lifestyle choices. In other radio interviews she has talked about holistic health, complementary therapies, medical politics, electromedicine, and alternatives to toxic chemicals in the home. In 2016, she sponsored a conference in Tempe, Arizona, called "Rife Frequency Therapy, Electromedicine and Holistic Health," at which she presented for over six hours.

In addition to being a featured speaker at conferences, Nenah Sylver conducts educational seminars for small and large groups. Her latest project is the professional recording of three albums of original songs, on which she sings and plays piano, guitar, and bass. The expected release dates are throughout 2022. She lives with her human and canine family near Phoenix, Arizona in the United States.

The 2016 Conference on Rife Therapy, Electromedicine, and Holistic Health

"Exceeded my expectations!"

**Three Electromedical Equipment
Researchers & Developers**

Steve Haltiwanger, MD, CCN

- ◆ Rife Therapy: History & Clinical Trials
- ◆ How To Evaluate and Use Modern Equipment
- ◆ How To Give Yourself a Rife Session
- ◆ Secrets of Your Electromagnetic Body
- ◆ Biological Effects of Beneficial PEMFs
- ◆ How To Survive Electropollution
- ◆ Q & A, both days
- ... and more

The Holistic Handbook of Sauna Therapy

360 pages, 7 x 10 softcover.
With tables, drawings, photos, and index.

- ◆ The Importance of Detox
- ◆ Physiology of Sweating
- ◆ The Three Types of Heat (Including FIR)
- ◆ Types of Saunas and How To Choose One
- ◆ How Sauna Therapy Works
- ◆ How To Do Sauna Therapy

Excellent book on saunas, one of a kind.
Never have I seen this subject dealt with
so comprehensively and in a manner that
shows a full understanding of how saunas
work and how they function."

—Joan Amtoft-Nielsen, MD, PhD

Well worth the price. . . . an excellent tool
for anyone interested in health maintenance
and disease prevention. . . . I am currently
investigating which model of sauna will best
suit my needs. This book will help me decide."

—Townsend Letter

Holistic Health | Electromedicine

Just two decades ago, Rife Therapy was virtually unknown. Gradually, hundreds of thousands of health seekers—from Germany to England, Indonesia to Australia, South Africa to the United States—began purchasing “rife” machines for themselves, their families, friends, and pets. This safe and effective technology, which delivers frequencies for healing via electrodes or an electromagnetic field, has been successfully used for cancer, neurological disorders, Lyme disease, gastrointestinal and respiratory ailments, childhood illnesses, and dozens of infectious diseases and degenerative conditions.

Despite the best efforts of organized medicine and the pharmaceutical industry to suppress this healing modality, Rife Therapy is finally emerging into public awareness. Tired of conventional medicine’s consistent failures to produce cures, people are making Rife Therapy part of their lives in ways they could never have imagined.

Previous versions of this book sold in over thirty countries. This updated and expanded 5th edition has been completely rewritten, reorganized and expanded, with almost 350 more pages in an easier-to-read format. It contains new information on self-administered natural therapies (including clay, activated charcoal, castor oil, and homeopathy), expanded sections on the dangers of electropollution and vaccines, and suggestions for safe substitutes for many of the drugs and poisonous chemicals we have in our homes. There is also updated advice on how to use frequency machines and other electromedical instruments for healing, along with listings of new diseases and frequencies that disable microbes and restore cellular vitality.

Complex data explained in understandable terms will reassure the layperson, while thousands of scholarly references will satisfy the serious researcher. *The Rife Handbook* is the most complete and versatile reference anywhere on electromedicine and holistic health.

This is an invaluable resource, not only for scientists and health professionals, but also for individuals who want to know more about technologies and adjunctive health therapies. . . . A better name might be “the bible of electromagnetic devices and complementary medicine made accessible to everyone.” . . . Nenah Sylver is an outstanding writer . . . I urge you to use this book as a guide and a reference.

—Steve Haltiwanger, MD, CCN
lecturer, researcher, and consultant in
psychiatry, Rife Therapy,
electromedicine, and nutrition

An invaluable reference manual for complementary therapies and holistic living in general. The writing is superb. The information is well researched, logically presented, and accurate. . . . I am beyond impressed.

—Martha M. Grout, MD, MD(H)
Arizona Center for Advanced Medicine
Scottsdale, Arizona

In this 5th edition . . . Nenah Sylver has set an even higher bar of excellence. She has conveyed so much new and important information in an even more organized and cohesive manner, that this edition is a “must have” even if you enjoyed the previous volume. . . . An incredibly valuable resource that everyone needs.

—Jimmie Holman, co-founder
Pulsed Technologies Research (USA)
and Bioenergetics & Pulsed Technologies (EU)

The Rife Handbook is an encyclopedia of holistic health. It’s so comprehensive, it’s mind boggling. . . . Nenah Sylver does an amazing job . . . This stellar body of work belongs in every household as well as every practitioner’s office.

—Bernard Straile, DC
developer of the IMAET quantum energy wellness equipment
